HOW TO USE RICS

How to Display Help Topics

[F1] = Help

Any time help is needed in RICS press the **[F1]** key to display the help topic for the current screen.

To use Help, select the Contents button at the top of the RICS Help window. The Help Topics window displays three tabs: Contents, Index, and Find.

Select the Contents tab to display a list of topics available in RICS Help. Topics are organized in books laid out much in the order of the screens in RICS. To open a book, double-click it. Continue opening books until you find the topic you want to read. Click the page icon to display the topic.

In Navigating the Menu, or any topic overview section you can also click on the option key of header menu to jump to the help topic for that option.

To search for a specific topic or word in Help:

Select the Search button at the top of the RICS Help window. The Help Topics window displays with three tabs: Contents, Index, and Find. Search using the following options:

- 1) Select the Index tab to look up a keyword or phrase in the online index. Browse through the index or type the term you're looking for and the list automatically finds the word or phrase you are typing. When the search phrase is found (or something comparable), double-click the phrase to display the associated help topic associated.
- 2) Select the Find tab to search for each instance of a word or phrase throughout RICS Help. Each listed topic has the keyword or phrase being searched. Double-click the topic

Colors & Fonts in RICS Help:

Green Underlined Jumps link to another topic. When double-clicked, it jumps to that help topic.

[Bold black text in brackets] refers to a key to press, or text to type in the indicated field.

[Red Text in Brackets] refers to a button to click in RICS.

Burgundy Text refers to either a question or option that would be on the RICS screen for that selected Help Topic.

Blue Text refers to either a question or option that is shown in an Example used for that selected Help Topic.

To print a RICS Help Topic:

From the page to be printed in the help file, click the Print button, or use the right mouse button to click inside the Help window, and then click Print Topic.

To print a group of related topics, click a book in the Help Contents and then clicking Print.

To return to the previously viewed topics:

In the Help topic window, click the **Back** button to return to the previously viewed topics.

To view a list of previously viewed topics:

In the Help topic window, click **Options**, click **Display History Window**. This displays all previously viewed topics since the last time the Help program was opened.

Getting Technical Support

We'll Get You Started Off Right: Your first 60 days are free! That's right—to make sure you get up and running quickly on RICS, we offer 60 days of support available free of charge to our new clients. Whenever you have a question just call and one of RICS support specialists will happily assist you!

For Technical Support or to register RICS, call **1-800-654-3123** or **(515) 270-8182** during normal office hours of Monday- Friday 8am to 5pm CST. Messages are taken on weekends and holidays and calls are returned however no one is usually in the office on these days. Fax us anytime at **515-270-1006**. If you would prefer to handle your support issue by email, you can also email us at help@csi-rics.com. One of the RICS support specialists will reply to your question just as soon as possible.

Our address is:

CSI Services
4725 Merle Hay Road, Suite 101
Des Moines, IA 50322

To ensure uninterrupted support after your 60-day warranty period has lapsed, we offer an annual support and upgrade program, where you will receive quality technical support from trained support professionals. As you use your software to manage your business, we can continue to help you thru our technical staff.

Getting Started - New to RICS

What to do before you start

After RICS is installed you should experiment with the "**practice**" data that is installed with RICS. The best way to learn how RICS works is to **practice**. Each time you go into an option press **[F1] (Help)** to display the Help topic for the current screen. Make sure have read

Navigating the Menu (on page 6) before continuing. Enter "**practice**" data into RICS. **DO NOT enter your entire inventory.** Right now, practice using RICS. Remember, "**practice**" data will be deleted so you can't hurt anything. When entering in your "**practice**" data remember to [Save] the information before you enter the next item, after you saved an item you can do a Lookup to see the item you just created. You can also ADD new SKUs, vendors, etc. **on the fly** when you do a Lookup and select the **[ADD]** option. If you have any questions call Support at **1-800-654-3123**

Printers

Before starting setup the printer(s). Setup the printer in Windows if it is not setup already. See Printer Setup in Windows (on page 17) for more information. Next, inform RICS about your printer in Company Setup under the Printer Setup option (on page 216) also in Labels in the Setup Stock Labels option (on page 82).

Start with File Setup

- Enter the Store information (on page 141).
- Locate fifteen or twenty different items in the store. These items are going to be used to setup *categories, departments, size types, and vendors*.
- Enter six or eight Categories. (on page 145) (DO NOT enter all of your data.)
- Enter three or four Departments. (on page 144)
- Define two or three Size Types. (on page 147)
- Enter five or six Vendors. (on page 153)
- Enter those fifteen or twenty stock numbers on the SKU's Setup screen. (on page 154)
- Enter three or four Sales People. (on page 106)

You should now have a good cross section of information entered into RICS. Next, you want to practice receiving, ordering, and reviewing these stock numbers.

Next in Stock Maintenance

- Use Enter Manual Receipts (on page 66) and receive some "**practice**" inventory into RICS. (Note: This option will be used later to enter your beginning inventory quantities.)
- Use the option Inventory Inquiry, (on page 70) and view the on-hand quantities of some of the SKUs just entered. Get comfortable using this option; *minimize this window* to keep it active while doing more data entry.
- Use Enter Manual Returns (on page 66) and take some quantities out of inventory. Again, use the option Inventory Inquiry (on page 70)

Enter Purchase Orders

- Enter three or four orders in Enter Purchase Orders (on page 56)
- Receive those orders in Receive Purchase Orders (on page 57). Receive some of the purchase orders in full, and some receive only partially.

Print Labels

- Stock labels are printed using the option Print Stock Labels. (on page 83)
 - Practice receiving more merchandise and printing stock labels again. Repeat this several times.
-

Move on to Sales

- Enter sales on the main computer using Enter Sales (on page 28). Please review the Ticket Overview (on page 21) section carefully. Don't just enter a few sales, enter quite a few, and practice with the different types of transactions.
- Print Sales Journals (on page 44) and Post Sales to Inventory (on page 45) are the final steps in the inventory cycle.
- Practice Backup Data (on page 184) and Backup Files for POS, (on page 176) on this computer and then **Restore Data from Main** on the POS computer.

You will also need to collect your store data information. Make a list of the *Departments, Categories, Size Types, Vendors, SKUs, and Employees* for your store(s) to be entered later.

Continue to practice all the above steps until you are comfortable with every step before going on to Entering New Store Data. (on page 4)

YOU MUST DELETE PRACTICE DATA!!

Contact Technical Support for help deleting the "**practice**" data information entered on the computer, before entering your real data.

Entering New Store Data

Before entering your "real" data

You should have the information you collected earlier to enter your *Department, Category, Size Type, Vendor, SKU, and Employee* data. Initial setup of any system is always the most time consuming part, but once your data is all entered you'll find you may seldom need to change anything other than new SKUs. You don't need to enter every record immediately because with RICS you have the ability to **Add on the fly**, but it may be easier to enter many records at once. It's also a good idea to enter as much data as you can before you start entering the inventory. The best way to enter your data is in the order as listed below.

Start by Setting up your Company Preferences -

Once these options are set up, your preferences would very rarely ever change.

Company Setup - Information on your company preferences (on page 214).

Mail List Setup - Information on your mail list preferences for customers (Optional- on page 218).

Season Setup - Information on your season preferences for SKUs (Optional- on page 218).

Then do File Setup

Once these files are setup, they would seldom change, expect for new SKUs.

Store - Information on your Stores, Tenders, and Taxes (on page 141).

Categories - Information on your Categories (on page 145).

Departments - Information on your Departments (on page 144).

(Optional) Groups - Information on your Groups (on page 145).

Size Types - Information on your Size Types (on page 147).

Vendors - Information on your Vendors (on page 153).

SKU's - Information on your SKUs the heart of the system (on page 154).

Depending on how you plan to setup your system, you may not want to create a SKU for all items you have in the store. You may want to create **Dump SKUs** for older items, discontinued items, departments, or for vendors. Or you may want to create some **Dump SKUs** to track sales until you get all your SKUs entered in the system.

Sales People - Information about your Salespeople is entered in the Sales People Menu (on page 106).

Next step is to enter your inventory in Stock Maintenance

Have a plan on how you'll enter your inventory, either by vendor, category, etc.

Enter Manual Receipts – (on page 66) to enter your beginning inventory quantities for each SKU. If printing stock labels it is recommended that you do not enter your entire inventory at once, instead enter several SKUs, or maybe one vendor at a time, print those labels, then label those SKUs and repeat, otherwise it may be difficult to locate all the SKUs with all the labels printed out at once.

Print Stock Labels. - Stock labels are printed using this option, and then label all items. (on page 83)

Backup Files for POS, on this computer and then **Restore Data from Main** on the POS computer. (on page 176)

Enter your Sales at the POS, Close the Batch of Sales, Copy Sales to Diskette at the POS, and then at the main computer Copy from POS Diskette. Remember you must Print Sales Journals and Post Sales to Inventory for the sales to be deducted from inventory, and credited as sales.

Logging into RICS

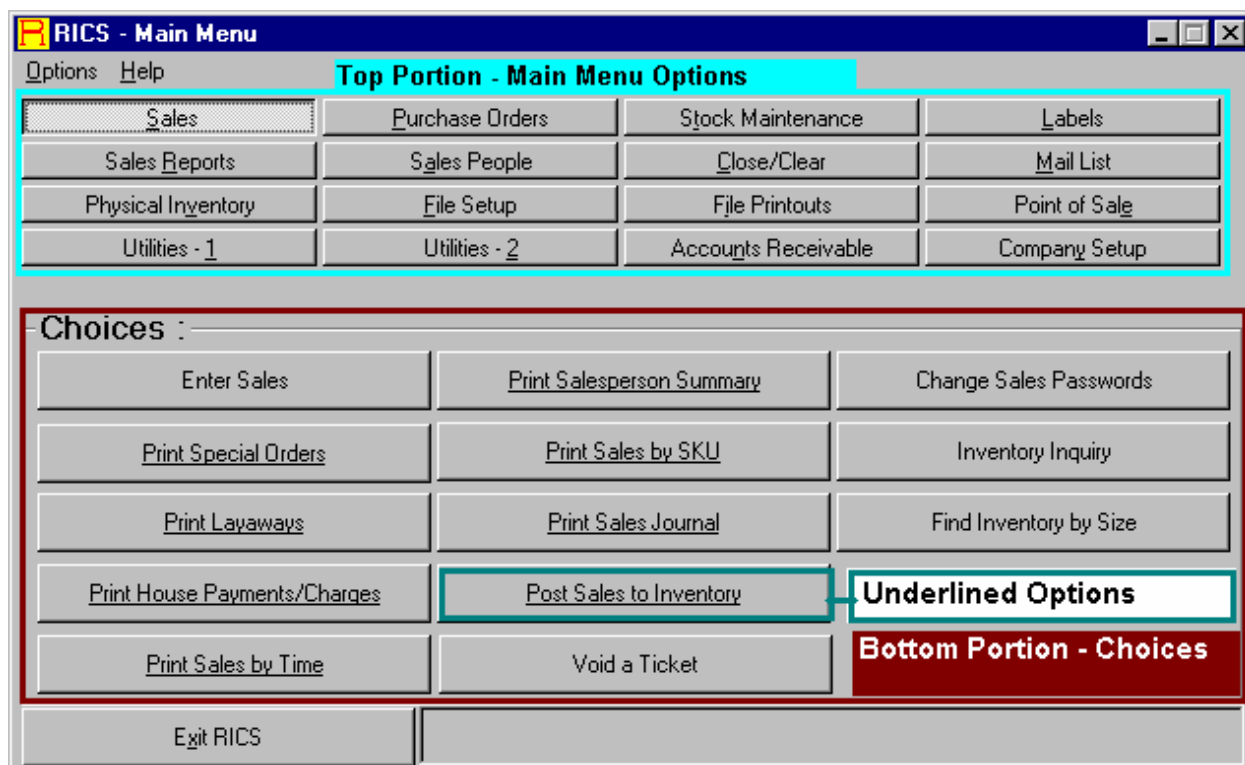

The image shows a Windows-style login dialog box titled "Login". The main text inside the dialog is "Please login to RICS!!" in a large, bold, italicized font. Below this text are two input fields: "User ID" and "Password". At the bottom of the dialog, there are three buttons: "Login", "Cancel", and "Practice Sales". The "Practice Sales" button is located to the right of the "Login" and "Cancel" buttons. Below the "Practice Sales" button, there are three smaller buttons: "INS", "CAPS", and "NUM".

Enter a valid User ID and Password and click **[Login]**.

To train employees on Entering Sales, login as a user that would normally login to this terminal (Ex: POS) and click **[Practice Sales]**. After clicking the button, the user is prompted to copy current RICS data files to a practice directory. This login will allow the person being trained to enter practice sales without disturbing the live sales file.

Navigating the Menu

The **RICS Main Menu** has two parts: The **Top Portion** is the **Main Menu Options**, and the **Bottom Portion** is the **Choices** for the **Active Main Menu Option**.

Notice the menu above. The **Sales** option is highlighted in the top portion of the menu which indicates the menu is **active**, so the available menu option **Choices** for **Sales** are then displayed below.

To select a **Main Menu Option** you can (1) click on the option, or (2) use your [Tab] or arrow keys to highlight and press [Enter] to **activate** or (3) Select the option and choice from the **Options** menu on the top of the screen [Alt] + [O].

To select a **Choice** (1) click on the choice, or (2) use your [Tab] or arrow keys to highlight and press [Enter] or (3) Select the option and choice from the **Options** menu on the top of the screen [Alt] + [O].

Underlined Options (i.e. *Post Sales to Inventory*) can be linked together with other **Underlined Options** and can be put into a Job List to run together. Data entry type screens (i.e. *Enter Sales*) **cannot** put in the job list.

Report Options

Selecting Options/Reports

Report Options will vary from report to report to report, and may be as simply as one line asking for **Stores: _____** or it could be a series of folders, where you would may have many different options in each folder.

Report Options	Criteria	Value Options	Printing Options	Trending Options
-----------------------	----------	---------------	------------------	------------------

How you select the options and choose the Criteria or Wild Cards (on page 8) will change how the report will appear, you can basically custom format any report this way.

Depending on the report options chosen, you may not be able to choose other options on the same report, you can then un-check some options, or clicking **[Clear Selections]** or press the **[Alt] + [L]** keys at the same time will clear the current entry that was displayed.

Any Underlined Report/Option will have a line for a **Report Comment: _____**, when you enter a comment you can then **Save Current Selection** which is that report's layout to run again later. By setting the report comment to "DEFAULT", the next time you run this report, the selection screen will display the default options you selected. If no default report selection exists the last report options are selected.

RICS - Sales Analysis Rep	
Options	Help
Retrieve Saved Selection	
Save Current Selection	
Delete Current Selection	

Once saved, you can then **Retrieve Saved Selection** to run that report/option layout again and again, without re selecting the report options or criteria. This is a great way to run routine reports such as end of the week reports, or options such as to call stores.

Sales Analysis Report Lookup	
Report Code	Comment
Sales Analysis	Category Summary Report
Sales Analysis	End of the Month
Sales Analysis	End of the Week
Sales Analysis	Linda's Report
Sales Analysis	Nike Report - Compare Stores
Sales Analysis	Store #1 Report
Sales Analysis	Store #2 Report
Sales Analysis	Store #3 Report
Sales Analysis	Tom's Report
Sales Analysis	Weekly Trending Report

Select	Cancel	Record:  	Page:  
--------	--------	---	---

Underlined Options can be linked together with other Underlined Options and can be put into a Job List to run together or to create a Super Job (on page 189)

Criteria / Wild Cards

Selecting Information Criteria for Reports

Before running a report, you determine what information should or should not print. When selecting most reports, a criteria option will display the same choices as the last time you ran that report. The new report may be run the same way, or you may change any of the selections for a different report. Wild Card selections may be entered for all reports. Following are some of the Criteria choices available when printing a report:

Criteria	Input Field
Stores	
Categories	
Vendors	
Seasons	
Groups	
Style/Colors	
SKUs	
Keywords	

INCLUDE INFORMATION: To **PRINT ALL** leave that selection **BLANK**. To print selected information, separate ranges with a hyphen "-", and individual choices with a comma ",". **For example:** **Categories 100-199,250-260, 350, 500** If entering a numeric range, separate the beginning and ending values with a hyphen "-", this must be numeric only and also must be the same number of characters. For example: **2000-2999** will print all 4 digit numeric entries from 2000 to 2999. But if you entered **2-35** this will not print entries from 2 to 35. Instead, this will select all entries of any length or are alpha numeric that the entry begins with any characters between 2 and 35. For instance 22135 and 29/BLK would also be included in this selection.

EXCLUDE INFORMATION: All report selections allow for **exclusions ("<" " >" less than sign followed by the greater than sign)**. This means you can run all of a selection except certain selections. For instance, you can print a report for all vendors except NIKE, all categories except 400-449, all stores except 3 and 10, all seasons except 8, etc. **For example:** **< >NIKE** would include ALL vendors EXCEPT NIKE. **< >400-449** would include ALL categories EXCEPT 400 through 449. **< >3, < >10** would include ALL stores EXCEPT 3 and 10.

KEYWORD CONSIDERATIONS: When selecting Keywords, it may desirable to have an SKU's keywords match all of the selected keywords, rather than just 1. If the first selection in the keyword field is an addition sign [+], only SKUs meeting **ALL** the selected keyword criteria will be included (or excluded) in the report.

Wild Cards

Selects Multiple or Similar Characters

All reports also allow you to make selections using wild cards. A wild card is a method that allows the computer to select multiple, similar entries using certain characters. A question mark "?" in an SKU selection indicates that any character can occupy that position. **For example:** SKUs **???37,12??,12???,??10????,10000-25000** This would print SKUs that are 5 characters long and end with 37 or SKUs that are 4 or 5 characters long and begin with '12' or SKUs that are 8 characters long that have 10 for the 3rd and 4th characters of the SKU and SKUs between 10000 and 25000.

An asterisk "*" in the selection will select all entries with any characters after the "*" if it is the last character in the selection or any character before the "*" if it is the first character in the selection. **For example:** **58*** would select all entries of any length that begin with the number 58 and are followed by any character of any length. For instance 58, 5872BLK, and 589999999 would be included in this selection. ***BLK** would select all entries

of any length that end with "BLK" and begin with any number of combination of characters. For instance MARY/BLK, 5872BLK, and JILL5-BLK would be included in this selection.

If you are selecting an individual entry to print such as 100-120, and that entry (such as an SKU or a mail list) has a hyphen in the entry, you must specify that the hyphen in this instance is not specifying a range. To do this precede the hyphen with a Exclamation point "!" or **[Shift] + [1]** . **For Example: 100!-120** Would select ONLY the SKU number "100-120" and not all entries between 100 and 200.

DOS Prompt, Look up, Add Job

To get to a MS-DOS Prompt

To get to a DOS Prompt you must be at the desktop, follow these steps exactly in this order:

1. Select "**Start**" by clicking the mouse on "Start" from the Desktop
2. Select "**Programs**"
3. Select "**MS-DOS Prompt**"
4. You will then be at **C:\WINDOWS>** type in **CD** and press **[Enter]**, you will then be at the **C:\>** prompt.

To get to a RICS prompt, from the DOS Prompt or **C:\>** prompt type in **cd\ricswin** and press **[Enter]**.

Look up [Ctrl] + [P]

To find a item at any Lookup Point

To locate a item in the system there are two ways to access the records, where ever you see the Look up icon  you may access the records for that field, these fields would include **SKUs, Customers by Account #s, Customers by Name, Family Members, Stores, Vendors, Departments, Categories, Size Types, Groups, and Users.**

1. Click on the Look up icon 
2. Hold down the **[Ctrl]** key and press the **[P]** key at the same time.

You can then scroll the files by clicking the **Record/Page** arrows **up** or **down**.

Highlight the item you want and click the **[Select]** button, or hold down the **[Alt]** key and press the **[S]** key at the same time.

You can also ADD new SKUs, vendors, etc. on the fly by clicking on the lookup icon  or hold down the **[Ctrl]** key and press the **[P]** key at the same time and click the **[ADD]** button.

Add Job and Run/Continue

Clicking this button to add the task to the Job List and then run the Job List. Press the **[Alt] + [R]** keys at the same time to Add Job and Run.

Clicking this button to add the task to the Job List and let you continue to add jobs to the Job List. Press the **[Alt] + [C]** keys at the same time to Add Job and Continue.

Clear, Save, Delete, Copy, Exit, Exit RICS

In all data enter or function screens the **[Clear]** button appears. Clicking the **[Clear]** button, or pressing the **[Alt] + [C]** keys at the same time, clears the current entry that was displayed.

In all report screens the **[Clear Selections]** button appears. Clicking the **[Clear Selections]** button, or pressing the **[Alt] + [L]** keys at the same time, will clear all information entered and reset them to the default report selections.

In all data entry or function screens, the **[Save]** button appears. Clicking the **[Save]** button, or pressing the **[Alt] + [S]** keys at the same time, saves the current entry that was displayed.

In all data entry or function screens, the **[Delete]** button appears. Clicking the **[Delete]** button, or pressing the **[Alt] + [D]** keys at the same time, deletes the current entry that was displayed.

In all data entry or function screens, the **[Copy]** button appears. Clicking the **[Copy]** button, or pressing the **[Alt] + [O]** keys at the same time, copies the current entry that was displayed.

Click the **[Exit]** button, or pressing the **[Ctrl] + [X]** keys at the same time, exits the current screen. You may also exit by clicking **Help** at the top of the screen and choosing **Exit**, or exit by clicking the **X** Box at the top right hand corner of the current screen.

Press the **[Ctrl] + [M]** keys at the same time to return to the Main Menu without exiting the current screen. You may also return to the Main Menu by clicking **Help** at the top of the screen and choosing **Main Menu**.

Click the **[Exit RICS]** button, or pressing the **[Ctrl] + [X]** keys at the same time, to close all screens and exit RICS. You may also exit by clicking **Options** at the top of the screen and choosing **Exit**.

Or you may also exit by clicking the **[X] (Exit)** Box at the top right hand corner of the current screen.

Reading Reports

The Key to your Business

With the many different options in the RICS reports you should be able to obtain any key information you may want to know about your inventory or customers, but the key to any report is to review the information and not just run the report.

(Best Sellers Report in order of ROI%)

Profit	GP-%	Turns	ROI%
161.70	45.0	2.7	218
179.85	55.4	1.7	216
107.50	51.2	1.8	188
144.75	44.6	2.2	175
234.85	53.4	1.3	153
134.80	45.0	1.7	143
122.29	38.8	2.2	140
3,346.75	50.6	1.9	198

A very simple way to tell how any item is doing in your store is to compare it to your store average this should be your key indicator as to what items, categories, or vendors are above or below your store average. On any report look at the store average for either GP%, Turns, or ROI%, with ROI% being the key number. Any items above that number are performing better, and any items less than that number are the poor performers, these items should be looked at very carefully for ways to improve their performance. Remember the old 80-20 rule, **At any given time of the year, about 80% of the business is done with about 20% of the inventory.**

ROI% (Return on Investment Percentage) - Sometimes known as GMROI (Gross Margin Return on Investment) is a combined measurement of how quickly your inventory sold, and how profitable it was. The ROI% is always annualized regardless of what period is being analyzed.

It is strongly recommended that you use ROI% as part of your inventory review, because it is the best overall indicator of performance.

Key Reports to Run

Sales Analysis: (on page 88) When running a Sales Analysis for week-to-date or month-to-date totals you may only want to run the report using a department, vendor, or category summary to see areas that may be strong and/or weak against your store average at a glance, and then run this report again by SKU detail for those selected areas, this should be a smaller and easier amount of data to review.

Week-to-Date: to get weekly totals, and review, before you close the week.

Month-to-Date: to get monthly totals, and review, before you close the month.

Year-to-Date: to get yearly totals, and review, before you close the year. You will probably want to run this several different ways such as by SKU detail, Vendor summary, and category summary.

8 Week Trending: when ever you want to know the trends of how items are selling. This is very important when reordering, or considering markdowns.

Best Sellers Report: (on page 93) This report can be used to print your best/worst selling SKUs, sorted by quantity sold, dollars sold, dollars profit, ROI%, or turns.

Before Reordering: To check the best selling items for reorders.

Before working with a Vendor: It's a good idea to run this just by the vendor to show them how their items are selling by ranking them from best to worst, you can also show them GP%, turns, and ROI%. This will also show them how they performed over all. You may also want to run this by selecting **Best by Vendor** to show them how they rank against your other Vendors. At least once a year every line should be appraised on their performance based on it's ROI%, Sales, Turns and Markdowns, **before Buying for Next Season, Before a Promotion, Special, or Markdowns:** It's a good idea to run this report by worst by to see your slow movers, or by

Recommended Transfers: (on page 79) This report can help you balance your inventory between stores you

may want to run this quite often, and before reordering. This allows the following options **Print based on:** Selects the method to report by. **Uneven on hand (doubles)** prints SKUs that have two or more on hand of a size at one store and none at another. Selecting **High turnover variance of at least** prints SKUs that are selling at a faster % rate (regardless of size) at one store than they are at another. Example: 500% would print any SKU selling 5 times faster at one store than another.

Size Type Analysis: (on page 99) The key to this report is timing. It should be run periodically during the year and at the end of the season before any large-scale markdowns. The intent is to determine which columns/rows are selling at the best rate and which columns/rows are over or under stocked. You can also check next season's future orders to see if you ordered the right sizes by running on-order (Future) quantity. Check by color and size (i.e. white shoes on order), to compare with a previous report to see if on order quantities reflect previous sell thru %.

Employee Analysis: (on page 111) Allows you to measure individual employee productivity and compared them to other sales people and to store averages. Whether you pay commissions or not, these reports generate the information to reward excellent performance or critique poor performance, and provide guidelines on areas to improve selling behavior.

Sales by Time: (on page 41) This report will show sales amounts and quantities sold for each hour of business. This report may be useful for scheduling purposes, and the two date ranges allows you to do comparisons.

Marketing Tools

To Get the Most Out of Your "Preferred Customer" Mail List

Direct Mail if properly prepared and executed can be the most effective and least costly form of advertising. Getting customers on your list can be done several different ways, whether you simply ask for the information, have the customer fill out a card, or take the information off their check. One of the easiest ways to obtain information is by using a **Frequent Buyer Plan** (on page 201), which gives the customer a incentive to get on your list because you reward them for making purchases in your store. You can also run reports or lists for Frequent Buyers customers by Plan #, Quantity, or Dollars spent.

Any of the following options can be printed to labels to stick on cards, or envelopes, exported to a file to work with your word processor to create personalized cards, letters, or envelopes, it can be copied to a diskette to give a mail processor, or printed as a list to hand write letters/cards or to be used as a phone list to call your customers. You can run these options for the entire company, or select by Store, Vendor, category, or individual salesperson. These are just a few ideas and how to run them.

New Customers: To run a list of all new customers under **Sales Criteria** enter in the **Added to the computer from __ to __** the date since you last ran this option, this should be done within two weeks of when the new customer made their first purchase and followed up with a thank you card, letter, or phone call.

Old Customers who haven't purchase: To run a list of old customers under **Sales Criteria** enter in the **Date of last purchase from __ to __** the date since you last ran this option, this is a great way to contact

Thank You Cards Simply send a follow up thank you card or letter to the customer for making their purchase in your store. Customers appreciate and remember this extra contact with them. To run a list of recent customer purchases under **Sales Criteria** enter in the **Date of last purchase from __ to __** is the date since you last ran this option, this should be done within two weeks of the purchase.

PT's (Personal Trade): Under **Mail List Setup** (on page 218) create a field for the Salesperson's name, then all your salespeople can see who the customer's personal salesperson is. You can then also select mail list options for the selected salesperson.

Top Spending Customers: To run a list most Dollar purchases under **Sales Criteria** enter in the **PTD, YTD, or TTD** the amount range in dollars (i.e. **500-99999**) this example would print any customer who purchased from \$500 to \$99,999.

Check Size Reminder Cards (Children): To run a list for size reminders under **Sales Criteria** enter in the **Date of last purchase from ___ to ___** for the date range you want, if this is also for selected categories under **Detail Criteria** enter in the **Category**.

Birthday Cards: To enter birthday information select **[Family]** when entering Mail List information there is an area for the birthday information. To print select Print Mailing List (Family) (on page 126) then choose **Family Criteria** and enter the **Birth Date from ___ to ___** and select the **Birth Month**.

Gender: To enter gender information select **[Family]** when entering Mail List information there is an area for the gender information. To print, select Print Mailing List (Family) then, **Family Criteria** and enter the **Gender** information.

Special Size Promotions: First run a Size Type Analysis to locate the sizes that you need to move. Then under **Detail Criteria** enter in the **Column/Row** information. This type of promotion is best setup as a Personalized Letter to the customer.

Personalized Letters: Select the report to run as a **Export comma-delimited file** and give it a name, then in your word processor create your form letter, and then mail-merge with this file.

Trunk Shows / Vendor Promotions: To run a list of customers who purchased from a selected vendor or category use **Detail Criteria** and enter in the selected **Vendor** or **Category**.

Phone List: Select your criteria and run your report as either a **Wide** or **Narrow Report**.

Customer Detail Records: To enable you to give the customer better service, by knowing what, and when they have purchased in the past, plus comment areas, this can be printed at the POS.

Top Performance

To get the most out of RICS be sure you're using some key features to enter data quicker, focus your reporting, and staying on budget

Eliminate entering the same sizes by setting up Case Packs, (on page 161) which are a preset group of quantities **you create** for selected columns and rows. They are used in any option that allows size entry, to speed up the entering of data. To use case packs, you would enter the case pack number and the quantity would be automatically displayed. Create your own case packs for sizes you normally carry in your store (such as a 24 pair size run in N, M, W).

Quit entering Job after Job to run, by combining Jobs together in a Super Job (on page 189), to run again and again without re-entering any of the information. A must for calling stores, or End of the Month reports.

Stop typing the same information over and over by creating Macros.(on page 205) A macro is a single keystroke that represents a series of keystrokes. The best time to use a macro is when the same information is typed continually. This is a great tool for entering the same information such as a City, State & Zip code.

Never again select criteria for reports or options that you run again and again by entering a Report Comment. (on page 7) Once saved, you can then **Retrieve Saved Selection** to run that report/option layout again and again, without re-selecting the report options or criteria. This is a great way to run routine reports such as end of the week reports, or other options such as to call stores.

For each report, you can create a default job by typing **[DEFAULT]** in the **Report Comment** field and save (or add the job) to save the report settings. The next time the selection screen is pulled up for that report, the DEFAULT job is loaded even if different settings for this report were used on the previous (LAST) job.

Creating Model Quantities can make Reordering Easy for selected SKUs and then running Automatic Purchase Orders. (on page 59)

Focus Reports and **Make Easy Price Changes** by setting up Seasons (on page 218) and creating Groups.(on page 145)

Stay on Budget with an Open-to-Buy Plan (on page 158) and **Buy the Right Sizes and Quantities** by using Order Worksheets. (on page 61)

Easily Receive Merchandise or Check Late Deliveries buy creating Purchase Orders. (on page 56)

Contact Customers by using the Marketing Tools. (on page 13)

POS Equipment/Setup

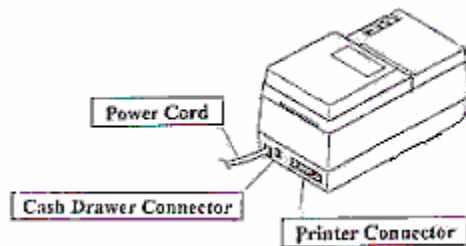

To install your POS equipment

This is only applicable if you purchased your POS equipment from CSI Services. Contact your hardware supplier for equipment purchased elsewhere.

WARNING: DO NOT connect/disconnect anything to/from your computer while your computer has the power turned on.

CONNECTING RECEIPT PRINTER

Install the ribbon and receipt paper according to the printer's instructions. Connect the printer cable to the back of the printer. The other end of the cable will connect to the back of the computer.

Before using your printer be sure you have (1) Setup the printer in Windows, (2) RICS Printer Setup and (3) Manager's Options. The Manager's Options screen is displayed the VERY FIRST time you use the POS software, or by pressing **[Manager Options]** from the Ticket Header section of the sales screen.

CONNECTING CASH DRAWER

Your cash drawer will connect via a "telephone-style" cable to the back of your receipt printer. Your receipt printer will have a black plug over the cash drawer connection, remove the plug and insert the cable. You need to indicate in RICS where your cash drawer is connected in Manager's Options

CONNECTING the BAR CODE READER

Your bar code reader will already be programmed if purchased from CSI, and should work without doing anything "special" in RICS, or to the bar code reader. Keep any information that was sent with the scanner for future reference.

PSC 6000 Decoded Scanner

A "Y" shaped cable will interface the laser between your keyboard and the back of your computer.

1. **With the computer turned off**, disconnect the keyboard cable from your computer.
2. Plug the small male plug of the "Y" cable to the keyboard port (connection) on the computer.
3. Attach the keyboard cable to the female plug of the "Y" cable.
4. Turn on the computer.

If the connections do not fit your computer just switch the adapter to the other side of the connector.

Percon Power Wedge 20, PSC Undecoded Scanner, & Credit Card Reader

A "Y" shaped cable will interface the Power Wedge 20 Decoder to the back of your computer.

1. **With the computer turned off**, disconnect the keyboard cable from your computer.
2. Plug the 25 pin connector of the cable in the back of the Percon PW20 marked **Host Input**.
3. Plug the small male plug of the "Y" cable to the keyboard port (connection) on the computer.
4. Attach the keyboard cable to the female plug of the "Y" cable.

5. Attach the laser scanner to the front of the Percon PW20 mark [Input 1](#).
6. Set the Percon PW20 power switch to the [ON](#) position.
7. Turn on the computer.

Credit Card Reader

The device that reads the magnetic stripe on a credit card for account information to automatically be processed for a credit card transaction. Attach the credit card scanner to the front of the Percon PW20 mark [Input 2](#).

TESTING YOUR BAR CODE READER

Test you reader by scanning some UPC bar codes from a DOS Prompt; 12 digits should appear on the screen, if not contact Technical Support.

POS Platform

Neatly organizes your keyboard, printer, monitor, and Pole Display to fit on top of the cash drawer and hides cables.

Customer Pole Display

Shows the customer information about the transaction that includes the description of the product, quantity, price and change from the transaction. It may also be used for marketing or other information, allowing two lines of up to 20 characters per line to be displayed. The pole display will connect to the serial port in the computer; contact Technical Support on how to setup messages.

Modems

To perform communications between your main computer and POS computers, we strongly recommend using either a **Hayes Accura** or **Zoom** external 56K modem. Many internal modems that are purchased with computers are sometimes not totally Hayes compatible, or are often poorer quality modems, which causes more communications problems. External **Hayes Accura** or **Zoom** are the only Modems CSI recommends. The modem is connected thru a serial or com port on the back of the computer. The phone line is then connected to the back of the modem in the **line** jack outlet; a phone can also be attached to the modem thru the jack outlet marked **phone**.

Make sure you have no other devices on this phone line that will answer calls, such as a fax or answering machine. For more information see Communications File Setup (on page 161) and Communications Setup (on page 214)

Printer Setup in Windows / Bar Code Printer

To Setup or Change a printer in Windows

For **RICS** to know about your printer it must first be setup in Windows 95/98. To perform this setup, follow these steps exactly in this order:

From the Windows Desktop:

1. Select "Start" by clicking the mouse on "Start"
2. Select "Settings"
3. Select "Printers" to open the printers folder.
4. Click the mouse ONCE on the selected printer you plan to use in **RICS**:
(If there are no printers to select from on the screen, use **Add Printer** to add your printer driver see *Add Printer below.*) **Do Not use the Printer Driver diskette** that may have come with your printer.
5. Select "File"
6. Select "Properties"
7. Select the "Details" tab.
8. Select "Port settings" and the small configure LPT port box will appear.
9. Click ONCE on "Spool MS-DOS print jobs" to remove the check mark
10. Select "OK"
11. Select "OK" again
12. Close the job by clicking on **X** in the upper right hand corner

Now your system should return to the Windows 95 Desktop and be ready for the Printer Setup in **RICS**.

To Add a Printer

Follow steps 1-3 as shown above only in step 4 select *Add Printer* as your choice, and the **Add Printer Wizard** will appear.

- 4A. Select "Next" to begin installing the printer.
- 4B. Select "Local Printer" and click "Next" to continue.
- 4C. Highlight you choice from the Manufacturers List on the left and the Printers listed on the right.
Select "Next" to continue.
- 4D. Highlight the port (usually LPT1) from the list of Available ports and select Configure Port.
- 4E. Configure the port as shown in steps 9 & 10 above.
- 4F. The configure port box will close, select "Next" to continue.
- 4G. Enter the printer name and select "Next" to continue.
- 4H. Select "Finish" to complete the installation.

Bar Code Printer

Zebra 2722*

If using a separate bar code printer it is recommended that you have a 2nd **Parallel Printer Port** installed in your computer, or purchase a **USB Parallel Printer Adapter** which allows you to connect a Parallel printer thru your USB port, that way you will not have to switch from one active printer to another.

With the Zebra printer you have the choice of printing regular (sticky labels 2.25"X1.25"), hang tags (Cardboard stock 2.25"X1.25"), jewelry tags (sticky/non-sticky - Butterfly 2.20"X0.50") and small label (custom format 1.25"X1.00"), with the option of custom formats on all labels.

The printer must be setup in both Printer Setup and Stock Label Setup.

***PLEASE NOTE:** Zebra printers were formerly manufactured under the name Eltron. All settings and instructions under either name are interchangeable with regards to appropriate model number.

Portable Bar Code Reader_ Percon PT2000

To scan a physical inventory, PO receipts, manual receipts, and transfers

This section describes how to use the Percon PT2000 portable bar code reader (loaded with CSI APP Software Program). It is used to scan bar codes on your merchandise, to enter physical inventory counts, manual receipts, manual returns, PO receipts, and/or transfers between stores. Before using the Percon unit for actual counts, experiment with scanning bar codes, manually entering counts and getting familiar with the different keys on the reader.

PERCON KEYPAD

The PT2000 keypad has three types of keys: *data keys*, *function keys*, and *action keys*. Each key produces an audible beep when you press it.

Data Keys: Data keys are used to enter letters, numbers, and several other characters. Each key has two modes: normal and alpha. You use the **[Alpha]** key to switch between the modes. (See Alpha key below).

Function Keys: There are four function keys, F1 through F4, at the top of the keypad. When pressing the Alpha key, these keys change to

F5 through F8.

Action Keys: There are four action keys: **I/O**, **Alpha**, **BKSP**, and **ENTER**.

I/O: Press this key to turn the PT2000 on and off.

Alpha: Press the **Alpha** key to toggle between the *normal* and *alpha* modes. When in the Alpha mode, a caret (^) appears at the cursor position in the display screen. The PT2000 remains in the alpha mode until you press a *function* key, enter a quantity, or press the **Alpha** key again.

BKSP: This is the backspace key. Press it to move the cursor one place to the left and delete the character there.

ENTER: Press this key to enter the current data string and move to the next area.

The following screen is the first menu you see then the unit is turned on:

PERCON PORTABLE
10:06:10 (Current Time)
01/11/97 (Current Date)
F-KEY=CONTINUE

Press any of the Keys F1 -F4 to continue

The next screen will then be displayed:

PERCON CSI APP
F2=WEDGE
F3=COLLECT DATA

Select one of the options:

F2=WEDGE is used to setup the PT2000 as a keyboard wedge to attach a scanner to a PC to scan directly into the computer. Contact CSI before using this option.

F3=COLLECT DATA is to use the PT2000 as a portable bar code reader [use this option](#) to do inventory, transfers, receipts or returns.

Press the **F3** Key to continue and the following
MAIN MENU is displayed:

F1=ENTER DATA
F2=SEND FILE
F3=ERASE
F4=EXIT

SCANNING INVENTORY

F1=ENTER DATA (COUNTS): Press the [F1] key
and the following *DATA Screen* is displayed:

STORE NUMBER **Physical Inventory:** Enter a 2-digit store number (i.e.: 01, 02, etc.)

When Scanning Transfers, Receipts or Returns, YOU MUST enter store number as "00"!

The appropriate transfer or receiving store numbers are entered on the computer when you select "*Post Data from Portable Reader*".

Press **Enter** after entering the store number and the
following *UPC Screen* is displayed:

To Change a Store Number: Press **F3** = REV (Review), Press **F5** = 1st(1st Record), Press **F7** = MOD (Modify), Enter the new Store Number, Press **Enter**.

In the *UPC Screen*, just scan the bar code for each item you want counted. When a bar code is scanned, and a good read has taken place, the PT2000 will beep, the screen will clear, and you may then scan another bar code. There is nothing to enter, just scan bar codes one after another.

The **F Keys (Function Keys)** Used when entering data are as follows:

F1=SKU to manually enter an item by the SKU#, COL, ROW, and quantity.
(In the *SKU Mode*, F1=UPC will take you back to UPC mode)
F3=REV Takes you to the *REVIEW MODE*
F4=EXIT Takes you back to the *MAIN MENU*.

REVIEW MODE

When the reader is in the *REVIEW MODE* the following keys are available. If you forget what function keys are available in the *REVIEW MODE*, press F8=HELP. Then press any function key (F?=CONT) to return to *REVIEW MODE*.

F1=PREV Displays the Previous Record
F2=NEXT Displays the Next Record
F3=DEL Deletes Current Record on the screen
F4=EXIT Returns you to Enter Data Mode
F5=1st Takes you to the 1st Record in the file
F6=FIND Finds a UPC or SKU record
F7=MOD Allows you to modify the quantity for a count
F?=CONT Press any function key to continue in *REVIEW MODE*

Entering PO Receipts

When entering or scanning PO receipts into the portable reader, at the *SKU Screen*, enter the **PO number** being received in the *SKU* field. Then enter **REC** for the *COL* (column) and **PO** for the *RW* (row), press **ENTER**, then press the **F1** key (F1=UPC) to scan UPCs. The following entries will be used as quantities received for that PO number. If you wish to enter receipts for another PO, again enter the new **PO** number as *SKU*, **REC** as column, and **PO** as row.

Transferring the counts from the Reader

Make sure the computer is ready to receive data from the portable reader by selecting *F5) Physical Inventory, C) Get Data from Portable Reader*. Connect the "direct connect" cable to the bottom of the PT2000 and to the serial port on the computer. (If you are not attaching to COM 1, you will need to contact CSI to change the configuration.) From the *Main Menu* on the PT2000, press the **F2** key (**F2=SEND FILE**), and the following screen will appear:

Press the **F2** key (**F2=CONTINUE**) and the counts will be transferred to the computer. [Next run *F5) Physical Inventory, D) Post data from portable reader*.]

Deleting ALL Counts from the Reader

All counts need to be deleted after the counts have been successfully transferred to the computer and you have successfully ran *F5) Physical Inventory, D) Post data from portable reader*. From the *Main Menu*, Press the **F3** key (**F3=ERASE**), the following screen will appear:

Press the **F3** key (**F3=ERASE**). The reader has now been cleared and can be used for more counts.

PT 2000 Fixes

No beam comes from the scanner:

Take off battery cover on the back and remove the batteries, then replace the batteries, this will reset the unit.

Unit is frozen, no keys work:

Take off battery cover on the back and remove one of the batteries, hold down both the **Enter** and the **Alpha** keys keep hold these keys down and replace the battery while holding down these keys, this will do a complete system reset.

The data in the unit will be lost while doing this.

SALES

Overview

For Entering Sales Screens and Tickets

Before entering sales you must setup certain options that will appear on your sales ticket screen, how and where you want receipts printed.

Managers Options - Set Options for Sales Tickets.

Additional Sales Ticket Options - (Optional)

Currency Options - (Optional)

All sales are grouped together in a batch, the complete sales cycle would consist of:

1. Start a Batch of Sales - to start entering tickets.
2. Enter Sales Tickets - enters Sales and Customer information.
3. Close a Batch of Sales - ends the current batch of sales
4. Copy Sales - From the POS/Register to the main computer.
5. Print Sales Journal - Prints the daily sales transactions.
6. Post Sales to Inventory - Posting Sales will deduct the items sold from inventory.

Manager Options

Sets Options for Sales Tickets

The Manager's Options screen is displayed the very first time Enter Sales is selected, or by clicking **[Manager Options]** when in the **Batch Header** or **Ticket Header** section of **Enter Sales**. If no **Password** exists, you will be at:

Beginning Receipt Message - Ending Receipt Message

Up to five lines of text can be printed at the beginning and end of each sales ticket. These lines could be used to print store name/address and your return policy. Each line can be formatted to print with a different style of text, check the **_ Bold** and/or **_ Large** box or leave un-checked for normal print. **Note:** Any line with bold and/or large print is not displayed on the screen any differently. A **"large"** line can only have half the number of available characters. For example, a 40 column receipt can only print 20 characters in large print.

[Center Messages] will automatically center your messages.

The following screen determines basic functionality for the sales screen, and shows a **normal setup for equipment purchased from CSI**.

The screenshot shows the 'Manager Options' window with the following settings:

- # Lines on receipt: [blank]
- # Lines to Print: [blank]
- Default tender type: 1
- Default Trans. type: 1
- Auto # receipts: ☒
- Allow perks: ☐
- Allow discounts: ☒
- Automatically Post: ☐
- Receipt Format:
 - 40 Column (selected)
 - 60 Column
 - 80 Column
 - 80 Col. Grid
- Net Price Only: ☐
- Retail & Discount: ☐
- Retail, Discount, & Net: ☒
- Cash Drawer:
 - No Cash Drawer
 - Comm Port
 - Attached to Printer (selected)
- (Printer Codes): 007 [] [] [] []
- # Receipts to print: 1

Buttons at the bottom: Cash Totals, Center Messages, Save, Open Drawer, Exit. A numeric keypad is visible at the bottom right with buttons INS, CAPS, and NUM.

Lines on receipt and # Lines to print: Leave blank for pre-printed/perforated receipts, indicate the # lines on receipt/to print (6 lines per inch).

Default tender type: Enter a number for the default tender type to display on the sales screen, (i.e. 1 for cash) or leave blank for no default tender type. See Tender Types.

Default transaction: Enter a number for the default transaction type to display on the sales screen, (i.e. 1 = regular sale).

Auto # receipts: Checked on for the receipts to number consecutively, automatically or left un-checked allows the receipt number to be entered before each transaction.

Allow perks \$: Checked on will display a field that allows perks to be entered with each sales transaction, left un-checked no field is displayed. Perks can also be set up for each SKU's.

Allow discounts: Checked on will display a field that allows a discount percentage to be entered left un-checked no field is displayed for discounts. The price can always be over-ridden whether this is checked on or not.

Automatically Post: This should be left **unchecked**. If you have a network, contact your support person for more information.

Receipt Format: This option is for your printer and should be set for **40 Column**. (For printers purchased from CSI)

There are three choices of pricing information that will print on the customer's receipt, select one.

Net Price Only: The price the item sells for is the only price (Net) that is printed on the receipt.

Retail & Discount: Both the retail price and discount amount are printed, but not the net selling price.

Retail, Discount & Net: All three of the prices are printed on the receipt.

Cash Drawer:

No Cash Drawer if no cash drawer is used.

Com Port if the cash drawer is connected to COM Port, it will then ask for the **COM PORT #**.

Attached to Printer if the cash drawer is connected to a printer, it will then ask for the **Printer Codes**. These are the decimal codes that are sent from the printer to the cash drawer in order to make the cash drawer open.

If you have a **STAR** receipt printer purchased from CSI, enter **07** in the first box and make sure the other boxes are blank.

If you have an **EPSON TM** series receipt printer enter **27, 112, 0, 25, 250** in each box, respectively.

If you have a different printer, consult your printer manual.

of Receipts to print should be set to **1**. If you want to always print multiple receipts, enter the number of receipts in this field.

[Cash Totals] This brief report is a **Sales Recap** broken down by transaction type, a **Cash Drawer Recap** broken down by tender type and a **Void Summary**. You may also **[Print]** these Cash Totals.

[Open Drawer] This will open the cash drawer.

Sales Ticket Options

Required Account Numbers for Selected Transaction Types.

Required Account Numbers for Selected Tender Types.

Automatically Reprint Sales Tickets.

Additional Ending Messages for Selected Transaction Types.

Additional Ending Messages for Selected Tender Types.

Contact Customer Support for more information about implementing or changing any of these features.

Required Account Numbers for Transactions: RICS will allow the user to set options to require Account Numbers to be entered for selected transactions types. You may want to have account numbers required for all layaway sales & payments, special order deposits & pickups and all house charge payments.

Required Account Numbers for Tender Types: RICS will allow the user to set options to require Account Numbers to be entered for selected tender types. You may want to have account numbers required for all house charge, store credits or all refunds.

Reprint Sales Tickets: RICS will allow the user to set options to automatically reprint sales tickets for selected transactions types. The system will be preset to reprint layaway sales, layaway payments, and special order deposits. You may also configure RICS to manually reprint sales tickets on demand.

Additional Ending Messages: RICS will allow the user to create special messages to print after your normal ending receipt message for the following:

- All sales tickets.
- Selected transactions types (such as special orders and layaways).
- Tickets tendered by House Charges.
- Refund tickets with a negative total.

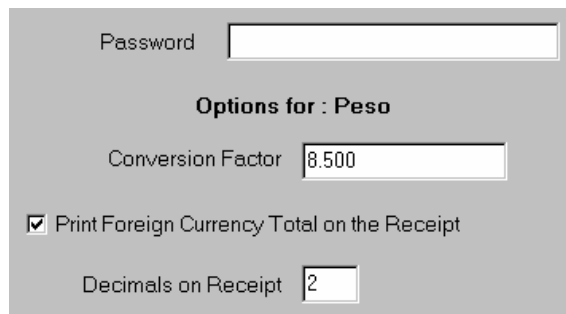

These messages could be your store refund policy, layaway policy, special order policy, or a signature line for refunds or House Charges.

Currency Options

Displayed only if it is setup in the RICS.CFG file. Contact [Technical Support](#) for more information on setting up this option.

When you go into Enter Sales Batch Header click on the **[Currency Options]** button or press **[Alt] + [C]** to get to the following screen:

Options for : Peso

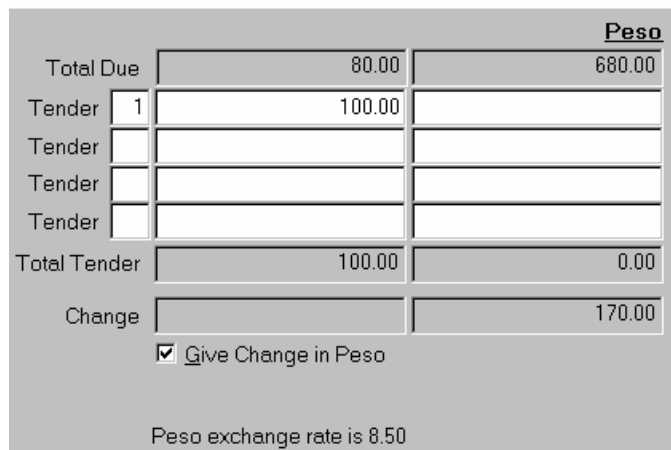

Conversion Factor

☒ Print Foreign Currency Total on the Receipt

Decimals on Receipt

Enter your **Conversion Factor** (exchange rate), check on/off **Print Foreign Currency Total on the Receipt** and enter the number of **Decimals on Receipt** (0-4).

Currency Tender: When tendering a sales ticket in foreign currency you will have two columns for tender, the left hand column is for dollars and the right hand column is for the foreign currency with the description above it, and the calculated exchange rate entered. You can enter the tendered amount in either column depending on the currency given, and you then also have the option to select how to **Give Change in ____** by check on the option below, the exchange rate is also displayed.

		<u>Peso</u>

Total Tender	100.00	0.00
Change		170.00
☒ Give Change in Peso		
Peso exchange rate is 8.50		

Start New/Close a Batch of Sales

Sales Tickets are grouped in a Batch of Sales

Start a Batch of Sales: This screen is used to start a new batch of sales. It is displayed when you go to Enter Sales and the previous batch of sales has been closed, if this screen does not come up when Enter Sales is selected, you have not closed the previous batch of sales. Any time sales are entered for a different store and/or date, you should *Start a New Batch of Sales*. After all sales for a given store and/or date are entered you should close the current batch of sales. A *Batch of Sales* needs to be transferred from a POS/register to the main computer by Copy Sales to Diskette, or by a modem Call, where the sales need to be Printed on a Sales Journal and Posted to Inventory before they actually take effect.

Store: Enter the store number of the sales being entered and the last ticket # used will appear.

Last ticket #: It is best to let this number increment each day, if you do not change this number your tickets will continue to increment from the last time you entered sales. It is not recommended to restart at ticket number one (1) each day. The first ticket number will be one number higher than this number. For example: a -0- will start the tickets at 1. If you don't want users to be able to change the last ticket number in RICS, change the RICS.CFG entry Sales Screen, Item ChgTicket, to have a value of 'N',

Date: This is the date of the sales being entered. Leave blank to use the current date/time.

Close a Batch of Sales

This screen is used to close batch of sales

You go to this screen from the Ticket Header screen by using **[Close Batch]** or **[Alt] + [C]**. This screen will let you balance the cash in the cash drawer with the computer's total of the cash, and show a Sales Recap.

Password: if used enter the Manager's Password.

Cash Count (Deposit): this number is used to determine the over/short amount. (Optional)

[Cash Totals] or **[Alt] + [T]** will display a small report showing the Sales Recap, a Cash Drawer Recap, and Void Summary you may also print this report which can be used to balance the drawer. (Optional)

[Close Batch] or **[Alt] + [C]** you will be prompted - Are sure you want to Close the Batch?

[Salesperson Summary] or **[Alt] + [S]** will print a Salesperson Summary report. (Optional)

[Open Drawer] or **[Alt] + [O]** will open the cash drawer.

[Count Money] or **[Alt] + [M]** will list cash and other Tender Types counted to balance the cash drawer. (Optional)

The **Starting Cash Drawer Amount** field is a stored amount from the **Ending Cash Drawer Amount** of the last closed batch. If there is a difference in the Starting and Ending Cash Drawer Amounts, then the **Total Cash** is adjusted by the difference, affecting the **Cash Count (Deposit)**. This is an optional feature that allows you to make corresponding G/L Summary entries when there is a difference and the deposit is affected.

Count Money

Count out your cash at the end of day

When you close your batch you can use the **Count Money** screen to help you keep track of tender types for your daily sales. On the screen shot below, notice the tender types are Cash, Check, MC/VISA, Discover, and American Express.

Enter Sales (Count Money)
Help

Tender Type	Computer Total	Your Count	Difference
Cash	181.12	0.00	-181.12
Check	65.00	0.00	-65.00
MC/VISA	339.99	0.00	-339.99
Discover	0.00	0.00	0.00
Amer Expr	0.00	0.00	0.00
Ending Cash Drawer Amount	105.00	0.00	-105.00

* Total Deposit	691.11	105.00	-586.11
------------------------	---------------	---------------	----------------

Double click a tender type to count that tender. The following screen shot shows a tender type treated as cash, this one happens to be Cash. You can enter change and bills. As you do, your total is affected and shows the difference between the computer total based on tendered sales for this tender type and your count.

The **Count Money** screen also has an entry for **Ending Cash Drawer Amount**. Here you can count your drawer and if there is a difference between the beginning cash drawer amount and the ending cash drawer amount, the drawer difference adjusts the cash deposit on the Close Batch screen. The following screen shot shows a **Starting Cash Drawer Amount** is a stored amount from the **Ending Cash Drawer Amount** of the last closed batch. If there is a difference in the Starting and Ending Cash Drawer Amounts, then the **Total Cash** is adjusted by the difference, affecting the **Cash Count (Deposit)**.

Starting Cash Drawer Amount	105.00
Ending Cash Drawer Amount	200.00
Cash Tendered	586.11
Less Payouts	0.00
** Total Cash	491.11
Cash Count (Deposit)	491.11
Amount Over/Short	0.00

Enter Sales

Entering Sales – Overview

Sales consists of three separate screens all which must be entered:

Ticket Header to enter **Cashier**, **Transaction** and **Customer** information

Ticket Detail to enter **SKU/Column/Row**, **Quantity**, **Price** and **Discount** information.

Ticket Tender to **Tender** out and end the sale.

Use the mouse or press the **[Enter]** or **[Tab]** keys to move the cursor from one field to the next within the current section of the sales screen. To move backwards use the mouse, or the press **[Shift]** + **[Tab]** keys to move backwards one field.

The section of the sales screen you are in is displayed on the "status line" at the top of the screen. Each of the three sections of the sales screen will have different options that are displayed at the bottom of the screen.

Transaction Types are:

- 1 - *Regular Sale*
- 2 - *User Defined*
- 3 - *Special Order Pickup*
- 4 - *Layaway Sale*
- 5 - *Gift Certificate Sale*
- 6 - *Charge Payment*
- 7 - *Special Order Deposits*
- 8 - *Layaway Payment*

Once a transaction type has been saved, you cannot change it, you must void the ticket and then enter a new ticket to change it.

Other Options within Sales Tickets are:

Manager Options sets Options for Sales Tickets.

Ticket Review will allow you to change items already entered on a Sales Ticket.

Reclaim Ticket will allow you reclaim/undo a voided ticket.

Reprint Ticket will allow you to reprint a Sales Ticket.

Pay Outs are used to record cash taken from the cash drawer.

Enter a SALESPERSON (CTRL-P for lookup) INS CAPS NUM

There is no limit to the number of items you can sell on a single ticket.

Note: **UPC** field will not be displayed unless UPC bar codes are used. **Discount%** and **Perks** may or may not be displayed, depending on how you set up the [Manager's Options](#).

Entering a SKU:

Scanning UPC bar codes: With the cursor at the **UPC** field simply scan the bar code. The **SKU**, **Column** (Size), **Row** (Width), **Qty** (quantity will default to 1) and **Price** will be entered for you. The SKU description, style/color and Price **Extension** will also be displayed. You may change any of the fields.

WITHOUT Scanning UPC bar codes: Press **[Enter]** past the UPC field (if field is displayed). Type in the **SKU**, **Column** (Size), and **Row** (Width). The **Qty** (quantity will default to 1) and **Price** will be entered for you.

If you need to lookup the SKU #, click on the lookup icon  or hold down the **[Ctrl]** key and press the **[P]** key at the same time.

Changing Quantities when scanning: When scanning an item the cursor defaults to the **Price** field. Use your mouse to click on the quantity field or hold down the **[Ctrl]** key and press the **[Tab]** key at the same time to move backwards to the field.

Discount% and **or Amount** may or may not be entered.

If the customer is purchasing another item:

Simply scan the next item or:

[Save/Next SKU], **[Alt] + [S]**, or **[F4]** will save the displayed SKU, allowing another item to be sold. Each time an item is saved, the SKU section clears and the cursor goes back up to UPC field, the saved item then appears in the **SKUs already entered on ticket** portion of the screen.

When you are ready to collect the customer's money press:

[Save/Tender], **[Alt] + [T]**, or **[F5]** will save the displayed SKU and, the *Ticket Tender* screen becomes active.

Other Options from this screen are:

[Void], or **[Alt] + [V]** will void the current sales ticket. (You can setup passwords to be required before allowing anyone to void a ticket.) For more information see *Change Sales Passwords*

[Clear], or **[Alt] + [V]** will clear only the displayed SKU. Items already entered on ticket will not be cleared.

[Mail Detail], or **[Alt] + [D]** will display the purchase history information of the account number entered for the current sales ticket. For more information see *Mail Detail*

[Change Header], or **[Alt] + [H]** will take you back to the ticket header. For more information see *Ticket Header*

[Next Price], or **[Alt] + [N]** will enter the next price that has been setup for the displayed SKU. If no other prices are setup for the SKU the price will not change

[Review], or **[Alt] + [R]** will take you to the *Ticket Review* screen to look at, modify, or delete items that have already been entered for this sales ticket.

[Reverse Qtys], or **[Alt] + [Q]** will reverse the quantity of the SKU you have entered. This is an easy way to change a sale into a return.

Comment A comment may be added to each SKU for readability on the sales receipt. This is ideal for special order deposits to describe the merchandise.

Return Code, if displayed, is a code to determine why an item is being returned. The code may be entered or the lookup option may be used.

Discount %, if displayed, is the % discount entered without the decimal point. For example, a discount of 10% should be entered as **10**, not **.10**. **Amount** is the dollar and /or cents amount of the discount.

Tax will appear as setup in the Store File. You may un-check the box to make individual items non-taxable. If your tax rate is already zero, it does not matter if the sales tax boxes are checked or not.

Salesperson will default to the cashier number, but can be changed to any other salespersons number to do split sales on the same sales ticket. You can have multiply salespeople on the same sales ticket but only one per line item.

Family Member will allow you to keep mail list detail for more than one person on the same mail list account number. Entering a Family Member will enter the detail in that members file. You can have multiply Family Members on the same sales ticket but only one per line item.

Mail Detail End Sale (F4) Void Add More SKUs Clear

The ticket comment INS CAPS NUM

Tender is used to record how a customer is paying for the merchandise. It will default to the total sale amount. If a default tender type was selected in Manager Options, then that tender will also be entered.

If you want to continue the payment to another ticket, you can use a tender of '99'. This will force the next ticket to be for the same customer. The tickets are then joined as a 'continued' ticket. If any part of a continued ticket is voided, the entire transaction will be voided. This allows the cashier to ring up a gift certificate sale and a regular sale and only collect payment once from the customer.

Four different Tenders are available for recording a split tender. (i.e. both cash and check are used.)

Tender Total cannot be less than the sale. **All Sale Must Be Fully Tendered.**

Change will be displayed if the amount of the tender is greater than the total due.

Tax can be changed or overwritten here.

Other Charges is used to record charges for services such as freight or delivery. The Total due will change accordingly.

Ticket Comment is not required. It could be used to record information on why a item was returned, a check number, or a credit card expiration date. Any information entered here will print on the customer's receipt, added to the customer's Mail Detail, and print on the sales journal.

Other Options from this screen are:

[Mail Detail], or **[Alt] + [D]** will display the purchase history information of the account number entered for the current sales ticket. For more information see [Mail Detail](#)

[End Sale], or **[Alt] + [E]** will save the rest of the ticket. The receipt will print and cash drawer will open. You will then be back at the Ticket Header, ready to enter a new ticket.

[Void], or **[Alt] + [V]** will void the current sales ticket. (You can setup passwords to be required before allowing anyone to void a ticket.)

[Add More SKUs], or **[Alt] + [A]** will take you back to the ticket detail to add more SKUs or you can change other information. For more information see [Ticket Detail](#)

[Clear], or **[Alt] + [C]** will clear the tender amount entered and will default back to the total sale amount.

Note: If a sales ticket has been ended with the wrong tender entered, and you want to correct this to balance for your deposits, you can enter a new sales ticket with nothing sold (the amount due is -0-), in ticket tender enter the incorrect tender type and that amount as a negative, then enter the correct tender type and that amount as a positive (the total tendered for the ticket is still -0-, but the tender's totals for the day will then change when the ticket is saved).

Ticket – Review, Reclaim, Reprint, Refunds

Allows you to change items already entered

From the Ticket Detail screen **[Review]**, or **[Alt] + [R]** will take you to this option. The screen will display any item already entered for this sales ticket. You cannot review previous sales tickets that have already been ended.

[Remove Item], or **[Alt] + [R]** will remove or delete the highlighted item from the Sales Ticket.

[Modify SKU], or **[Alt] + [M]** will enter the highlighted item back in the Ticket Detail so you can make any necessary changes to the item and then save the changes.

Ticket - Reclaim

Allows you reclaim/redo a voided ticket in the Current Batch

From the Ticket Header screen **[Reclaim Ticket]**, or **[Alt] + [R]** will take you to this option. The screen will display only voided sales ticket in the current batch of sales that can be reclaimed. You cannot reclaim sales tickets from a previous batch of sales, from tickets that were voided after completion, or from voided continued ticket sequences.

[Select], or **[Alt] + [S]** will enter the highlighted Ticket back to the Ticket Header so you can make any necessary changes to the Ticket and then save the changes.

Ticket - Reprint

Allows you Reprint a Sales Ticket in the Current Batch

From the Ticket Header screen **[Reclaim Ticket]**, or **[Alt] + [E]** will take you to this option. The screen will display any sales ticket in the current batch of sales. You cannot reprint sales tickets from a previous batch of sales.

[Select], or **[Alt] + [S]** will reprint the highlighted Sales Ticket.

Ticket - Refunds

To Enter Customer Refunds/Returns

When a customer returns merchandise, enter all information just as you would a regular sale only change the quantity to a negative number (i.e. **-1**). DO NOT change the price to a negative number. (You can setup Sales Passwords to be required before allowing anyone to enter a Return).

In the **Ticket Header Section** enter **Transaction - 1 Regular Sale** and a Customer **Account** number if entered on original sale.

In the **Ticket Detail Section** enter **SKU** - Enter the SKU number, column, and row, only change the quantity to a negative number (i.e. **-1**). DO NOT change the price to a negative number.

To tender a return the amount will show up as a negative amount. Enter the tender type of the refund and the amount of the refund as a negative amount. If you are giving the customer a Store Credit enter tender **#11** Store Credit.

You Can Require Account Numbers for All Refunds

Ticket - Credit Slips, Void, Pay Outs

Credit, Due Bill, Store Credit, Customer Credit, Credit Slip

No matter what you call them, they fit under tender type **# 11 Store Credit**. When using store credits **Always Enter an Account Number**, this will track the balance of Store Credits for the customer.

Enter **Ticket Header Section** and **Ticket Detail Section** as you always would.

In the **Ticket Tender Section**, enter the **Tender Type #11 Store Credit** and the amount of the Store Credit being redeemed.

[Mail Detail], or **[Alt] + [D]** will display the Store Credit Balance and purchase history information of the account number entered for the current sales ticket. For more information see Mail Detail

If the customer makes a purchase with a store credit and the credit is for more than the purchase, enter the tender (**# 11 Store Credit**) for just for the amount of the sale, and RICS will keep track of the balance of the store credit under their account.

You Can Require Account Numbers for All Store Credits

Ticket - Void

Voiding a Sales Ticket before it's been completed

[Void], or **[Alt] + [V]** will void the current ticket. You will be asked if you are sure you want to void the ticket. If a void password was set up in the Change Sales Passwords, you will be asked for the password. If a ticket is voided it can be Reclaimed later, (if it is in the current batch of sales), this would be the same as putting the ticket on hold until you're ready to complete it.

Pay Outs

Are used to record cash taken from the cash drawer

You might enter a pay out, for example, if you take \$2.50 out of the drawer to pay the postman for a postage-due letter.

Enter the **Password** if required. For more information see Change Sales Password.

Enter the **Cashier**.

If the RICS.CFG entry ValidatePayouts in the Sales Screen section is N, then a line is available to enter a **Description** of the Payout transaction. If the ValidatePayouts entry is not in the RICS.CFG, or is entered as a Y, then you are required to select from the list of payout transaction descriptions.

Enter the **Amount**.

[Save] or **[Alt] + [S]** will save the information.

[Open Drawer] or **[Alt] + [D]** can be used to take money out of the drawer.

[Exit] or **[Alt] + [X]** will take you back to the sales screen without saving any information.

The cash totals (sales recap) can be printed when you close a batch of sales, this will print the total of all Paid Outs.

Special Order – Overview, Deposit

Overview

Special Orders consist of two separate types of transactions, the Special Order Deposit **#7** and the Special Order Pickup **#3** both parts must be done to track special orders properly.

A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders.

Special Order Deposit is done if the customer is going to put a deposit down or pay for an item you do not have in stock. **This is only a deposit.** The item is not taken out of inventory, nor does it become a sale until a special order pickup is done.

Special Order Pickup is done when the item is picked up. This is when the item is taken out of inventory and is counted as a sale in the system

Print Special Orders will print Special Orders Transactions from a selected range of store(s) and date(s)

Special Order Reports from Print Mail List will print a report on Special Orders allowing criteria selections.

You Can Require Account Numbers for All Special Orders

Special Order - Deposit

Special Order Deposit is done if the customer is going to put a deposit down or pay for an item you do not have in stock. **This is only a deposit.** The item is not taken out of inventory, nor does it become a sale until a Special Order Pickup is done. A salesperson does not get credit for the sale until a Special Order Pickup is done. (A special order deposit does not necessarily need to be done if the customer is paying in full and the SKU is VALID you may just want to make a Ticket Comment to mail out when in, or PAID will pickup when in.)

A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders.

In the **Ticket Header Section** enter **Transaction - 7 Special Order Deposit** and a Customer **Account** number.

In the **Ticket Detail Section** enter **SKU** - Enter the SKU number, column, and row.

If the SKU entered is a valid SKU previously entered in **RICS**, then the description and price will display on the screen.

If the SKU entered is NOT A VALID SKU currently in the system, **RICS** will allow you to enter an invalid SKU number, Column/Row (Size/Width) and Price. The system will not display a description. A description,

color or other information about the SKU may be entered in the **Ticket Comments**. Whatever SKU is entered will NOT be recorded as a sale. It is just used to print a sales ticket showing the item(s) being ordered, the total of the ticket, the amount paid, and the balance that will be due when the special order is picked up. The sale is recorded when you enter S.O. Pickup.

In the **Ticket Tender Section** enter the **Tender Type** and the amount of the deposit another line will show the **Balance Due**, this will also print on the customer's receipt.

[You Can Require Account Numbers for All Special Orders](#)

Special Order – Pickup, Refund, Print

Special Order - Pickup

A Special Order Pickup is done when the customer is going to pick up an item they had already paid a Special Order Deposit on. You MUST ENTER CUSTOMER ACCOUNT NUMBERS to track special orders.
[You Can Require Account Numbers for All Special Orders](#)

In the **Ticket Header Section** enter **Transaction - 3 Special Order Pickup** and a Customer **Account** number.

In the **Ticket Detail Section** enter **SKU** - Enter the SKU number, column, and row.

The SKU Must be a valid SKU previously entered in **RICS**, then the description and price will display on the screen.

In the **Ticket Tender Section** a line will show the amount **Previous Paid**, this amount will be taken off from the total due, enter the **Tender Type** and the amount to fully tender the sale.

Special Order - Refund

If a customer is returning a special order that has already been picked up you can do a regular Refund on the item.

When a customer needs a refund on a Special Order Deposit, enter all information just as you would on the Special Order Deposit, only change the quantity to a negative number (i.e. **-1**). DO NOT change the price to a negative number. A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders.

[You Can Require Account Numbers for All Special Orders](#)

In the **Ticket Header Section** enter **Transaction - 7 Special Order Deposit** and a Customer **Account** number.

In the **Ticket Detail Section** enter **SKU** - Enter the SKU number, column, and row, only change the quantity to a negative number (i.e. **-1**). DO NOT change the price to a negative number.

In the **Ticket Tender Section** enter the **Tender Type** and the amount of the deposit (Previous Paid) as a negative amount, another line will show the **Balance Due**. This should also be a negative number. These numbers should be the same as the original numbers only negative.

Print Special Orders

For a selected range of store(s) and date(s)

Stores is used to enter the store(s) that you wish to have Special Orders printed for. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately.

Print from ___ to ___ is used to enter the date range that the Special Orders should be printed for.

Select from posted sales, when checked any Special Orders that occurred in the specified date range that have been posted will print. For more information, see Post Sales to Inventory.

Select from unposted sales when checked you can use a date range. It is recommended to leave the beginning date and ending date blank. This will ensure that all unposted Special Orders are printed. Only Special Orders from sales that have NOT yet been posted will print. If sales have been posted, or your date range is incorrect, nothing may print.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

You may also use *Mail List*, *Print Mail List* to print out all Special Orders regardless of date.

Layaway - Overview, Payment, Pickup

Overview

A layaway is done when the customer puts a down payment on merchandise that the customer wants you to "hold". The customer would then make payments on the merchandise to pay off the balance owed. Layaway sales are taken out of inventory and credited for the complete sale when the item is first put on layaway. Layaways consist of two separate types of transactions, the Layaway Sale **#4** and the Layaway Payment **#8** both parts must be done to track Layaways properly. A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders. [You Can Require Account Numbers for All Layaways](#)

Layaway Sale is done when the customer first is going to put a deposit down on an item. **This is their deposit.** The item is then taken out of inventory, and it becomes a sale.

Layaway Payment is done when the customer is going to make a payment or the item is picked up. Print Layaways will print Layaway Transactions from a selected range of store(s) and date(s)

Layaway Reports from Print Mail List will print a report on Layaways allowing criteria selections.

Layaway - Payment

Layaway Sale or Deposit is done when the customer first puts a deposit down for an item. **This is their deposit.** The item is then taken out of inventory, and becomes a sale. A salesperson then gets credit for the sale. A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders.

[You Can Require Account Numbers for All Layaways](#)

In the **Ticket Header Section** enter **Transaction - 4 Layaway Sale** and a Customer **Account** number.

In the **Ticket Detail Section** enter **SKU** - Enter the SKU number, column, and row.

The SKU entered must be a valid SKU previously entered in **RICS**, then the description and price will display on the screen.

In the **Ticket Tender Section** enter the **Tender Type** and the amount of the deposit another line will show the **Balance Due**, this will also print on the customer's receipt.

Layaway - Pickup

Layaway Payment is done when the customer is going to pay on or pick up an item they had already put in Layaway. A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders.

[You Can Require Account Numbers for All Layaways](#)

In the **Ticket Header Section** enter **Transaction - 8 Layaway Payment** and a Customer **Account** number.

In the **Ticket Detail Section** enter **Payment on Ticket #** - this would be the original Ticket # when the item was put in Layaway it will then show you the **Originally Due, Less Paid** and the **Balance**. Enter the **Amount** of the payment, it will then show you the **New Balance**.

If you don't know the Original Layaway Ticket # **[Mail Detail]**, or **[Alt] + [D]** will display the purchase history information of the account number entered. For more information see [Mail Detail](#)

In the **Ticket Tender Section** will show the amount to be paid this amount will be taken off the balance. If you need to change the amount of the payment entered, press **[Change Amount]** or **[Alt] + [A]**.

Layaway – Refund, Print

If a customer is returning a Layaway that has already been picked up (Paid for) you would do a regular Refund. A CUSTOMER ACCOUNT NUMBER IS REQUIRED to track special orders.
[You Can Require Account Numbers for All Layaways](#)

When a customer needs a refund on a Layaway Deposit, enter all information just as you would on the Layaway Sale, except change the quantity to a negative number (i.e. **-1**). DO NOT change the price to a negative number.

In the **Ticket Header Section** enter **Transaction - 4 Layaway Sale** and a Customer **Account** number.

In the **Ticket Detail Section** enter **SKU** - Enter the SKU number, column, row, and price just as it was entered on the original Layaway Ticket, except change the quantity to a negative number (i.e. **-1**). DO NOT change the price to a negative number.

In the **Ticket Tender Section** enter the **Apply Layaway Balance to Ticket #** this is the original Layaway ticket this will then show the amount **Originally Due, Less Paid** and **Balance**, another line will show the **New Balance**, this should be a negative number. Enter the tender type and amount, press enter and the **New Balance**, will recalculate this should now be -0-.

If you are charging the customer a layaway fee you can **[Tab]** back to **Other Charges** and enter in the amount.

If you don't know the Original Layaway Ticket # **[Mail Detail]**, or **[Alt] + [D]** will display the purchase history information of the account number entered. For more information see [Mail Detail](#)

Print Layaways

For a Selected Range of Store(s) and Date(s)

Stores is used to enter the store(s) that you wish to have Layaways printed for. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately.

Print from ___ to ___ is used to enter the date range that the Layaways should be printed for.

Select from posted sales, when checked any Layaways that occurred in the specified date range that have been posted will print. For more information, see [Post Sales to Inventory](#).

Select from unposted sales when checked you can use a date range. It is recommended to leave the beginning date and ending date blank. This will ensure that all unposted Special Orders are printed. Only Layaways from sales that have NOT yet been posted will print. If sales have been posted, or your date range is incorrect, nothing will print.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

You may also use *Mail List*, [Print Mail List](#) to print out all Layaways regardless of date.

Gift Certificate – Sale

This transaction type is used to record a sale of a gift certificate. The Ticket Detail section will prompt for the amount of the gift certificate. [You Can Require Account Numbers for All Gift Certificates](#)

In the **Ticket Header Section** enter **Transaction - 5 Gift Cert. Sale** and a Customer **Account** number (Optional).

In the **Ticket Detail Section** enter **Gift Certificate Sale - Amount**.

In the **Ticket Tender Section** enter the **Tender Type** and **Amount**.

If your store tracks Gift Certificates, you may be required to enter a Gift Certificate #

Gift Certificate - Redeemed

When a gift certificate is redeemed, there is a gift certificate tender type in the Ticket Tender section of the screen. [You Can Require Account Numbers for All Gift Certificates](#)

Enter **Ticket Header Section** and **Ticket Detail Section** as you always would.

In the **Ticket Tender Section**, enter the **Tender Type #10 Gift Cert** and the amount of the Certificate being redeemed.

If you are tracking Gift Certificates, and you are requiring a Gift Certificate # when redeeming, you are taken to the Redeem Gift Certificates screen, where you enter the Gift Certificate # and Sequence.

House Charge – Sale, Payments, Print

A House Charge is another tender type # **9 House Charge**. When using House Charges **Always Enter an Account Number**, this will track the balance of the customer's account. [You Can Require Account Numbers for All House Charges](#)

Enter **Ticket Header Section** and **Ticket Detail Section** as you always would.

In the **Ticket Tender Section**, enter the **Tender Type #9 House Charge** and the amount of the Sale.

[Mail Detail], or **[Alt] + [D]** will display the House Charge Balance and purchase history information of the account number entered for the current sales ticket. For more information see [Mail Detail](#)

If the customer makes a purchase with a store credit and the credit is for more than the purchase, enter the tender (# **11 Store Credit**) for just for the amount of the sale, and RICS will keep track of the balance of the store credit under their account.

House Charge - Payments

This transaction type is used to record a House Charge Payment. The Ticket Detail section will prompt for the amount of the payment. [You Can Require Account Numbers for All Charge Payments](#)

In the **Ticket Header Section** enter **Transaction - 6 Charge Payment** and a Customer **Account** number.

In the **Ticket Detail Section** enter **House Payment - Amount**.

In the **Ticket Tender Section** enter the **Tender Type** and **Amount**.

Print House Payments/Charges

For a selected range of store(s) and date(s)

Stores is used to enter the store(s) that you wish to have House Payments/Charges printed for. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately.

Print from ____ to ____ is used to enter the date range that the House Payments/Charges should be printed for.

Select from posted sales, when checked any House Payments/Charges that occurred in the specified date range that have been posted will print. For more information, see [Post Sales to Inventory](#).

Select from unposted sales when checked you can use a date range. It is recommended to leave the beginning date and ending date blank. This will ensure that all unposted House Payments/Charges are printed. Only House Payments/Charges from sales that have NOT yet been posted will print. If sales have been posted, or your date range is incorrect, nothing may print.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

You may also use *Mail List*, [Print Mail List](#) to print out all House Payments/Charges regardless of date.

Print Sales by Time

For a selected range of store(s) and date(s)

This report will show, for each hour of business, the quantity and dollar amounts sold. This report may be useful for scheduling purposes. The two date ranges allows you to do comparisons.

Stores is used to enter the store(s) that you wish to have Sales by Time printed for. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately.

Date Range 1 from ____ to ____ is used to enter the date range that the Sales by Time should be printed for.

Date Range 2 from ____ to ____ is used to enter the second date range that should be printed. This would be for a comparison of the two ranges and would print side by side.

Select from posted sales, when checked any Sales by Time that occurred in the specified date range that have been posted will print. For more information, see [Post Sales to Inventory](#).

Select from unposted sales when checked you can use a date range. It is recommended to leave the beginning date and ending date blank. This will ensure that all unposted Sales by Time are printed. Only Sales by Time from sales that have NOT yet been posted will print. If sales have been posted, or your date range is incorrect, nothing may print.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

Print % of Total prints the percentage of sales for the day and hour for each hour there are sales.

☒ Select from posted sales

☒ Select from unposted sales

☐ Print percentages by department/vendor

☐ Print Cashier Summary

☒ Print SKU Subtotals

Add Job and Run Add Job and Continue Clear Selections Exit

The Sales Person Summary will show, for each sales person, the quantity sold, dollar amount sold, and perks per department or vendor. The summary will also print void and refund information **only** if no categories, vendors, or SKUs are selected.

Report Options

Print from ____ to ____ is used to enter the date range that the Salesperson Summary should be printed for.

Subtotal by will print a subtotal for each department or vendor per salesperson and as a total.

Select from posted sales, when checked will cause only **saved** posted sales transactions to be considered for the report. For more information, see [*Post Sales to Inventory*](#).

Select from unposted sales when checked will cause only the sales you have not yet posted to inventory to be considered for the report.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

Print percentages by department or vendor will print the percent of quantity sold and the percent of sales on the report for each salesperson and as a total to help determine strengths and weaknesses in your sales.

Print Cashier Summary will print a cashier summary for each salesperson at the end of the report.

Print SKU Subtotals will print the quantity and dollar value of each SKU the salesperson sold.

Criteria

	Stores	
	Salespeople	
	Categories	
	Vendors	
	SKUs	
	Groups	
	Keywords	

All selected stores are combined. You may select **stores**, **salespeople**, **categories**, **vendors**, **SKUs**, **groups**, and **keywords**. As with all RICS reports, leaving a selection blank will cause RICS to not use that selection as a basis of what is to be included in the report. The category and vendor selections will be very useful to verify the results of sales incentives contests (a \$50 dollar bonus for the salesperson selling the most western boots or a specific vendor's belts. You can click the lookup button  or press [CTRL] + [P] to lookup criteria.

Print Sales by SKU

For a selected range

This report will print a list of SKUs sold for a selected date range. This report can be run from sales that are posted, unposted, or both. Using this report as a "pick list", you would know which SKUs and sizes to restock on the sales floor from the warehouse or stockroom.

Report Options: Select Sales by SKU information by:

Print from ____ **to** ____ is used to enter the date range that the Sales by SKU should be printed for.

Select from posted sales, when checked any Sales by Time that occurred in the specified date range that have been posted will print. For more information, see [Post Sales to Inventory](#).

Select from unposted sales when checked you can use a date range. It is recommended to leave the beginning date and ending date blank. This will ensure that all unposted Sales by Time are printed. Only Sales by Time from sales that have NOT yet been posted will print. If sales have been posted, or your date range is incorrect, nothing may print.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

Sort by:

SKU The report will be sorted by the SKU number.

Category/SKU The SKUs will be sorted within their respective category.

Vendor/SKU The SKUs will be sorted within their respective vendor.

Print format:

Size Grid Format will print the SKUs in a size grid format (columns X rows).

Columnar Format will print the SKUs in a list by sizes sold.

Other report options that can be checked are:

Include Returns customer refund (returns).

Print Retail Price will include the retail price for the SKU on the report.

Print Store Totals will print the totals sold by store.

Print Category/Vendor Subtotals will print the subtotals if sorted by Category or Vendor.
Print SKU Subtotals will print subtotals by SKU.

Criteria: Choose whether you want to select/print a particular portion of your report by **Stores, Categories, Vendors,** or **SKUs**. For more information about selecting see Criteria or Wild Cards.

Print Sales Journal

Prints the Daily Sales Transactions

This journal will show a detailed listing of selected daily sales transactions. This report will print separate journals for each day, store, and register.

You must **Print a Sales Journal** and also Post Sales to Inventory for your inventory to be accurate, regardless if the sales were entered on the main or POS. A sales journal must be printed before you post sales. **DO NOT** post sales for a selected store and/or date unless all the sales are printed successfully and everything is correct. Review and keep your sales journals. You can print a sales journal as often as necessary before you post sales. The sales will post only once. But once you post sales you can no longer get a sales journal for those sales.

Stores is used to enter the store(s) that you wish to have Sales Journal printed for. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately.

Print from ____ to ____ is used to enter the date range that the Sales Journal should be printed for. **It is recommended that the 'Print from' and 'Print to' date ranges be left blank to ensure that all unposted items will print on the sales journal.**

Printing and Posting Using the Date Range: When you print and post your sales you will have the ability to enter a date range. This date range is used as a "filter" to decide if your sales should be printed and posted.

Print Sales Ticket Time: The time of each sales ticket can be printed on the Sales Journal. This can make it easier to research specific sales transactions. To print the time for each sale, perform the following:

1. At the RICS Main Menu select Utilities 2
2. Under **Section** select **SALES SCREEN**, and for **Item(s) for selected Section** select **JOURNALTIME**
3. Change the **Entry for selected Section and Item** to 'Y'.

Printing: For example, assume you have sales for three different days on your computer. The days are: 11/15/98, 11/16/98, and 11/17/98. The date range on your sales journal screen is 11/01/98 through 11/15/98. Any sales that have occurred in the specified date range that have not yet been posted will print. The only sales that will print are those that occurred from 11/1/98 thru 11/15/98.

Posting: Using the above example, when you post sales to inventory, the date range on your screen is 11/01/98 through 11/30/98. The only sales that will post are the sales that occurred 11/15/98. Why? Because only the sales that have been printed on a sales journal can be posted. What happens to the other two days, Nothing, and they are not lost. Just print a sales journal for those sales, by changing the date range, and then you can post them. To prevent a problem similar to this example, **leave the date range blank**.

When a Sales Journal is printing, it is possible for errors to occur. Below, is an example of an error message that can occur.

{bmc JournalError.bmp}

In the example above, SKU **2617** has either been deleted or discontinued. If that SKU really should exist, it would need to be added into inventory using **File Setup - SKUs**. Otherwise, you would need to void the ticket using **Sales - Void a Ticket**. If you void the ticket, all items on that ticket are NOT deducted from inventory or credited as sales. You would need to start a batch of sales on the MAIN COMPUTER and re-enter the ticket correctly.

Post Sales to Inventory

Posting Sales will deduct the items sold from inventory

This option will post your sales tickets. Posting sales will deduct the items sold from inventory and the sales dollars and quantities will increase. It is a good idea to post sales every day.

If you try to post sales before you Print a Sales Journal, those **SALES WILL NOT POST**. Instead, you will get a message stating all of your sales are not posted.

Stores is used to enter the store(s) that you wish to have Sales Posted for. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately. This screen will also show you **The current month and year** that the system is set for.

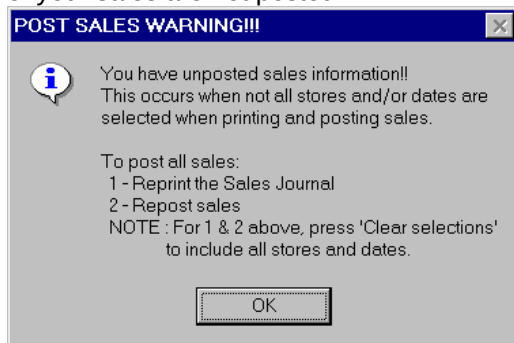

Post from day___ of the current month to day___ of the current month is used to enter the date range that the Sales should be posted for. **It is recommended that be left blank to ensure that all unposted items will be posted for the current month.**

Print negative on-hand report when checked on it will print a negative on-hand report which can help make you aware of items and/or sizes that were sold that you did not have entered in the computer. Knowing this information may help you correct your inventory on a more timely basis.

Printing A/R Detail - If not doing Accounts Receivable, leave this unchecked.

IMPORTANT: At the start of a new month, sales can **not** be posted for that month until the previous month is closed out. For example, sales can not be posted for March until February is closed out. For more information, see *Close/Clear - Close Month/Season/Year*.

NOTE: If the following notice is displayed when you are done posting sales, **DO NOT ignore it**. It means all of your sales are not posted.

Reasons sales might not have posted:

1. The sales you tried posting have not been printed on a sales journal.
2. The sales occurred for a different store than the store selected. Check the store number on the sales journal. Post the sales again, this time leave stores blank, or select the proper store.
3. The sales occurred for a date that is not included in the selected date range. Make sure the date range includes the date of your sales. If you still cannot determine why you have sales that are not posted, do the following:

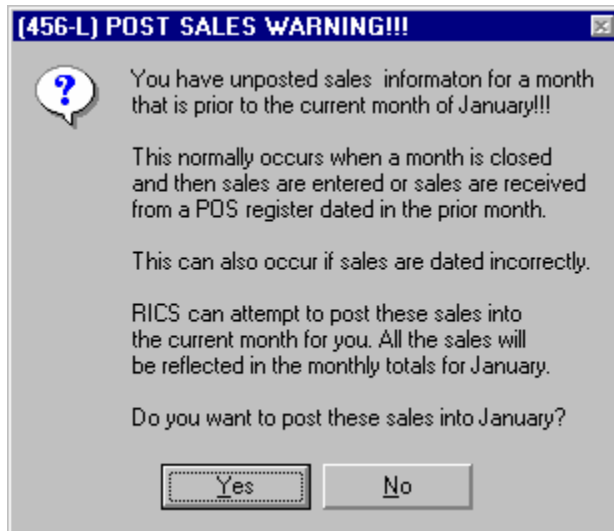

1. Print a Sales Journal but click the  or press the **[Alt] + [L]** keys at the same time before running. This will clear the current entry that was displayed.

2. Repost the sales but click the  or press the **[Alt] + [L]** keys at the same time before running. This will clear the current entry that was displayed. .

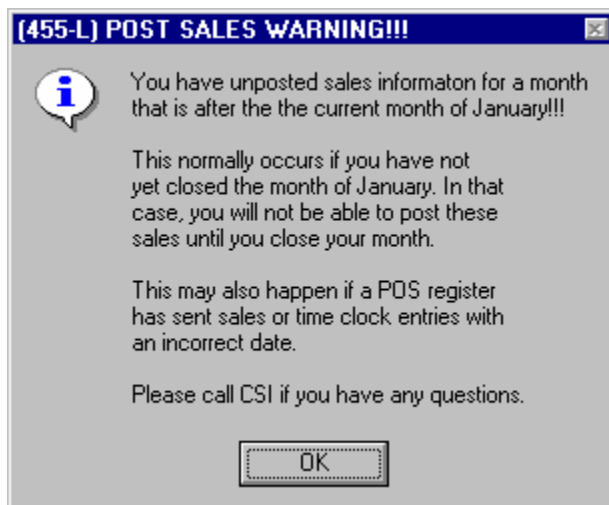

There may be times that you do not want all sales posted. Some reasons may be that you have sales that occurred in two different months the sales for the next month can not and should not be posted until you

closed out the previous month. Your months are on a weekly not monthly basis. Another reason is that you have sales on the computer for multiple stores and/or days. You notice a problem for one of the stores and/or one of the days. So, you select a store number and/or date range that does not include the sales in question.

If you have sales for a month before the current month as indicated in the Company Setup, you will receive the following message. It is recommended you click Yes which post the sales into your current month. Contact [Technical Support](#) for additional options.

If you have sales after the current month, you will receive the following message warning you that there are sales that are for a month after. An example of this message is entering sales on the first day of the month without closing the previous month's sales. Close the month and re-post the sales.

If you still can not determine why you have sales that are not posted, or how to get rid of them, please call [Technical Support](#) .

Print Sales Tax Recap

Summarize your sales and taxes collected by the customer's state

Screen Spool file

Job Name :

Stores

Print from to

☒ Print Store/State Report ☒ Select from posted sales

☒ Print State/Store Report ☒ Select from unposted sales

Print Sales Figures from

☒ Sales Ticket Totals

☐ Sales Ticket Detail (accurate except for rounding and cashier overrides)

This report will show your sales and taxes summarized by the mail file state of the customer. This report is ideal for mail order or catalog departments, where sales tax payments may have been made to multiple states.

Stores is used to enter the store(s) that you wish to have the recap consider. If you only have one store, or you want all stores printed, leave stores blank. Each store will print separately.

Date Range from ___ to ___ is used to enter the date range whose sales the Recap will use.

Select from posted sales, when checked any sales that occurred in the specified date range that have been posted will print. For more information, see [Post Sales to Inventory](#).

Select from unposted sales, when checked any sales that occurred in the specified date range that have been unposted will print. For more information, see [Post Sales to Inventory](#).

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

Print Store/State Report, Print State/Store Report options will print the report in the selected order, You may print both reports at one time.

Select from unposted sales, when checked any sales that occurred in the specified date range that have been unposted will print. For more information, see [Post Sales to Inventory](#).

Another choice is where to get the sales and tax figures from, either the ticket totals or ticket detail lines. If the ticket detail lines are selected then the sales tax calculated is the line item tax amount calculated for that line of the ticket. The collected tax is the amount that was collected for each sale. This could be different from the calculated tax if there are multiple line items. Each line individually could have a remainder of a cent. The collected tax is the line item tax for each line added together and then rounded. The difference is the amount collected at the sale and the total of the line item tax.

An example is 2 separate line items at \$10.95 each. A tax of 8% makes each line item tax \$ 0.876. The sales tax for the ticket shows \$ 1.75. The individual line items are \$ 0.88 each. In this example the calculated tax is \$ 1.76 and the collected tax is \$ 1.75.

Track returned sales by running a returned sales report. Each return shows the important ticket information for the return.

Print from _____ **to** _____ is used to enter the date range to print returned sales for.

Check the **Select from posted sales** checkbox to include returns from all posted sales.

Check the **Select from unposted sales** checkbox to include returns from all unposted sales.

Sort by SKU, Category and SKU, Vendor and SKU, Cashier, Salesperson, or Return Code.

Check the **Combine Stores** checkbox to show a summary for each return.

Check the **Include Price** checkbox to show the price the item was returned for on the report.

Check **the Include Only Trackable Returns** to show returns setup as trackable in the Return Code Setup form.

Check the **Include Return Code Subtotals** checkbox if you want subtotals for each return code when not sorting by

Promotion Code Analysis

Analyze the effectiveness of your promotions

The screenshot shows a Windows-style dialog box titled "Promotion Analysis Report". It has a menu bar with "Options" and "Help". The main area contains several input fields: "Job Name:", "Stores", "Promotion Codes", and "Print from" followed by "to". There are three checkboxes: "Combine Stores", "Select from posted sales", and "Select from unposted sales". At the bottom, there are four buttons: "Add Job and Run", "Add Job and Continue", "Clear Selections", and "Exit". Below the buttons is a status bar with the text "Add the job to the job list and continue working" and three keyboard shortcuts: "INS", "CAPS", and "NUM".

This report will summarize sales tickets using promotion codes and compare the data against the cost of the promotion. This will allow the user to compare the profits and response rates of different promotions.

Criteria: Choose which **promotions** and **stores** you wish to analyze. For more information about selecting see [Criteria](#) or [Wild Cards](#).

Print from ____ to ____ is used to enter the date range of the sales to analyze.

Select from posted sales, when checked any sales that occurred in the specified date range that have been posted will print. For more information, see [Post Sales to Inventory](#).

Select from unposted sales when checked allows you to include sales that have not yet been posted.

Check both **Select from posted sales** and **Select from unposted sales** to choose **ALL Transactions**.

Combine Stores should be checked, if available. If this option is not checked or not all the stores on file are selected, RICS will not calculate the response rate or promotion.

Void a Ticket - After the Sale

Voiding a Completed, but Unposted Sales Ticket

This option is used to void a ticket that has not been posted. It may be necessary to void a ticket because of a problem on a sales journal, or because the ticket was entered incorrectly. Once a ticket is voided it will still print on the sales journal, but it will not post. It still prints on the sales journal as a record of the transaction, and a void summary will show the number of voids, amount of voids, and % of net sales voided.

To Void a Ticket:

Listed will be all unposted sales sorted by **Store#, Date, and Ticket #**, this will also show the **transaction type** and **account #** for each ticket. Select (highlight) the ticket you want voided and click **[Void]** or press the

[Alt] + [V] keys at the same time.

Change Sales Passwords

To Create a New or Change an Existing Sales Passwords

This screen is used to set up and change passwords that are used on the sales screen. These passwords can be set up any time and will take affect immediately after being saved.

Manager Password is used to prevent people from Closing a Batch of Sales, changing Manager's Options, and issuing a Payout unless they know that password. If a password is not set up, you would not be prompted for a password on those screens.

Ticket Password is used to prevent people from Voiding a Ticket unless they know that password. If a password is not set up, you would not be prompted for a password when a ticket is voided. The ticket password can also be used to prevent: a return, a change in price, a perk from being entered, or a discount percentage or amount. For more information about setting these options call Technical Support.

Setting New Passwords If a password has not been created enter pass the current password, then **Enter New Password**, then **Enter New Password Again** and click **[Save]** or press the **[Alt] + [S]** keys at the same time.

Changing Passwords - If a password has been set up before, **Enter Current Password**, then **Enter New Password**, then **Enter New Password Again** and click **[Save]** or press the **[Alt] + [S]** keys at the same time.

You can change any of these passwords at anytime. It does not matter if you have already started a new batch of sales.

Sales By Day

The screenshot shows a software window titled "Screen Spool file". It contains several input fields and a group of radio buttons. At the top is a "Job Name" field. Below it are "Print from" and "to" date fields, followed by a "Stores" field. A section titled "Comparison Date" contains three radio buttons: "52 weeks ago" (selected), "# Days", and "# Weeks". To the right, a section titled "Week Ends on:" contains six radio buttons arranged in two columns: Sunday (selected), Monday, Tuesday, Wednesday, Thursday, Friday, and Saturday. At the bottom right is a checkbox labeled "Combine Stores". At the bottom are four buttons: "Add Job and Run", "Add Job and Continue", "Clear Selections", and "Exit".

Compare daily sales to last year by day of the week, a specific number of days ago, or a specific number of weeks ago. This provides the ability to compare current sales by day to the sales by day from last week, last month, last quarter, or last year. The report can be printed by store or all stores sales can be combined.

Print from _____ to _____ is used to enter the date range to compare sales by day to. These fields are required to run the report.

Comparison Date:

52 weeks ago - Compares the date range specified to 52 weeks ago based on the Week End on day.

Days - When clicked, a text box appears allowing the user to enter the number of days (maximum of 999) to compare the date range specified against.

Weeks - When clicked, a text box appears allowing the user to enter the number of weeks (maximum of 999) to compare the date range specified against.

Week Ends on - Select the day of the week to have the report use as the last day of the week.

Check the **Combine Stores** checkbox to show a summary for every day in the range for all stores combined.

Inventory Inquiry

Look at SKU's On-hand, On-order, Sales, quantities and other SKU information

Enter a SKU number and press **[Enter]** (You may use  or **[Ctrl] + [P]** to display a list of existing SKUs.).

Enter a **Store** number and press **[Enter]** (You may use  or **[Ctrl] + [P]** to display a list of existing Stores.)
Row is used only for certain Display options for a selected row of an SKU that has multiple rows.

This will display the SKU **Description**, and information on the **Category, Vendor, Vendor SKU, Style/Color, Size Type**, and **Last received** date for this SKU. Displayed in the upper right corner of the screen will be the **Retail Price, Markdown 1, and Markdown 2**, along with the **Average Cost, Current Cost** and **List Price** for this SKU. Sales totals for **Qty, Net, Markdown, Profit**, for the period **Week, Month, Season, and Year** are displayed below that.

The lower half of the screen will display the size grids based on the **Display Options** selected.

Options- This option will allow you to change the displayed quantities. Click **Options** or press **[Alt] + [O]** to display the list of Options A menu similar to the following will be displayed:

RICS - Inventory Inquiry	
Options	Help
✓ On Hand	F2
On Order (Current)	F3
On Order (Future)	F4
Model Quantities	F5
Short Quantities	F6
Month-to-Date Sales	F7
Season-to-Date Sales	F8
Year-To-Date Sales	F9
Column Only	F11
All Stores - On Hand	F12
All Stores - 1 Row	Shift+F1
All Stores Summary	Shift+F2

Hint: To quickly change the display, press the appropriate function key **[F1]** through **[F12]**, or shift and the appropriate function key. **[Shift]+[F1]** or **[Shift]+[F2]**

[F2] On Hand is the quantity and sizes on hand in the system.

[F3] On Order (Current) is the quantity and sizes on At Once Orders.

[F4] On Order (Future) is the quantity and sizes on Future Orders.

[F5] Model Quantities is the model quantity and sizes entered in the system

[F6] Short Quantities is the model quantity less the on hand quantity. If short is a positive number, on-hand inventory is greater than the model. If short is a negative number, on-hand inventory is less than the model.

[F7] Month-to-Date Sales is the quantity and sizes sold Month to Date.

[F8] Season-to-Date Sales is the quantity and sizes sold Season to Date.

[F9] Year-to-Date Sales is the quantity and sizes sold Year to Date.

[F11] Column only displays the quantity on hand, on order, model, short and MTD, STD and YTD sales for an SKU that does not have rows or for a selected row on an SKU that has multiple rows.

[F12] All stores on hand display the quantity on hand of all stores for an SKU that doesn't have any rows, or for a selected row of an SKU that has multiple rows.

[Shift] + [F1] All stores-1 row displays the quantity on hand, on order, and MTD, STD and YTD sales of all stores for an SKU that doesn't have any rows, or for a selected row of an SKU that has multiple rows.

[Shift] + [F2] All stores-summary displays the total quantity on hand, on order, and MTD, STD and YTD sales of all stores for an SKU, with no column or row information.

[Shift] + [F3] Max Quantities is the max quantity and sizes entered in the system.

[Shift] + [F4] Reorder Quantities is the reorder quantity and sizes entered in the system.

Process in Store Order - When this option is selected (a checkmark appears to the left of the option) and you click the **[Prev]** or **[Next]** buttons, the items are shown in Store, SKU order showing you all SKU's for 1 store, then when the store changes it starts with the first SKU. When this is not selected and you click the **[Prev]** or **[Next]** buttons, each store is displayed before getting to the next SKU.

Print Directly to Printer (if possible) - When this option is selected (a checkmark appears to the left of the option) and you click the **[Print]** button, the screen is printed directly to the printer, if possible. Otherwise it is printed to a screen pool file.

[Prev] or **[Alt] + [P]** - This option will display the previous SKU#.

[Next] or **[Alt] + [N]** - This option will display the next SKU#.

[UPCs] or **[Alt] + [U]** - This option will display the UPC codes for this SKU.

[POs] or **[Alt] + [S]** - This will display outstanding PO's of the selected SKU. A display box similar to the following will be displayed:

RICS - PO Lookup for SKU 436358975 for store # 1						
Store	PO Number	Ship Date	Cancel Date	Ordered	Received	Open
1	1250	7/15/98	7/31/98	8	0	8
1	1273	8/1/98	8/30/98	8	0	8
1	1294	8/15/98	9/15/98	8	0	8

OK

Page:  

[Trend] or **[Alt] + [T]** - This option will display the eight week trending information for the selected SKU. For more information, see [Eight Week Trending](#).

[Info] or **[Alt] + [I]** - This option will display additional information for the selected SKU/Store.

Additional information displays the **Season**, **Label Code**, **Group Code**, **Date 1st Received**, **Date Last Markdown**, **Perks**, and **Comments**. Also displayed is the **Last 12 Months Sales** for **Qty** and **Sales \$** listed by **Month** and also **Total**. Included on this screen is **G.P.%, ROI**, and **URNS** for the SKU/Store by **M-T-D**, **S-T-D**, and **Y-T-D**.

[Detail] or **[Alt] + [D]** - This option will display detailed Inventory Change Detail to see when you have

received, returned, transferred, or physically adjusted the inventory of the selected SKU.

[Print] or **[Alt] + [R]** - This option will print the current screen.

Inventory Change Detail

From the Inventory Inquiry screen, click the **[Detail]** button to view transaction for this SKU including, Manual Receipts, Returns, Purchase Order and Purchase Order Receipts, Transfers In, Transfers Out, and Physical Inventory Adjustments.

The information displayed is Store Number, Transaction Date, Transaction Type, Quantity, Cost, and any comments. The comments are Bill To/Ship From store information and Purchase Order numbers, and RMA numbers for returns.

The information is displayed in store order with most recent activity shown first.

You can **[Print]** the page by clicking the button.

Check the Detail check box to view size detail. Remove the check to show summary activity.

Check the Show All Stores check box to view all store activity for this SKU. If you selected an All Stores option from the Inventory Inquiry screen this option is not available and all store activity for this SKU is shown summarized.

If you want more detailed information, run the Inventory Detail Report.

PURCHASE ORDERS

Enter Purchase Orders

Create a New, or Look at /Change an existing Purchase Orders

PO Number - Enter a new number, or accept the default, which is one number higher than the last PO number. You can use any combination of letters and numbers in a PO number. However, a PO cannot start with the letters 'A' or 'V'; they are reserved for Automatic and Direct Sale Purchase Orders respectively.  or **[Ctrl] + [P]** will display a list of existing PO numbers. If you use letters in your PO number, the system may not be able to automatically increment to the next PO number.

Enter the **Bill-to Store** and **Ship-to Store** number(s). Enter the **Vendor** number. If you are not using EDI, the cursor will skip **Order Type**, which will default to **RO - Regular Order**. If using EDI you will have the options **RE for At Once Order**, and **SA for Future Order** and an Option box for **Export** will appear. Click "on" or "off" the option for **Storing Labels**, or press **[Alt] + [L]**.

Header Info.	SKU Info.
--------------	-----------

You then have two folder options **Header Info** and **SKU Info**. Start with the **Header Info**. You may then enter a **Confirmation #**. The **Account #**, **Terms**, and **Ship-Via** fields defaults to information setup in the Vendor file. Any of this information can be changed. **Backorder & Split shipment** can be Click "on or "off", If you leave either field blank, that information will not print on the PO.

Order, Ship, Cancel, and **Pymt dates** should be entered. Ship dates are used to determine if the order is an **At Once** or **Future Order**. It is also used in the *Open-to-Buy*, *Purchase Order Reports*, and *Open POs by Month Report*. Payment date is used to calculate, and print a cash payments projection at the end of the *Purchase Order Report*. The current date on the computer is the default order date. **Program Code** is used only when entering some EDI purchase orders. **Comments** or special instructions can also be entered on the purchase order.

SKU Info - A purchase order can have as many SKUs as necessary. An SKU must be set up before you can enter it on a purchase order, if an SKU is not yet set up simply click **[Add]** in the SKU Lookup After an SKU number is entered, the description and style/color are displayed from the inventory screen. The **Retail Price** and **Current Cost** are also displayed; and you can change these values (Changing the values here will also change them in the master file unless you choose to change a RICS.CFG entry).

Casepacks: If you enter a casepack number, the sizes set up for that casepack will automatically be displayed. **X__** can be used to order more than 1 casepack for that SKU. A casepack must be set up before you can enter it on a purchase order, if a casepack is not yet set up simply click **[Add]** in the Casepack Lookup . The casepack number will print on the Purchase Order.

Save

Enter the quantities that you want to order. After entering quantities for a SKU click **[Save]** or press **[Alt] + [S]** to save. The SKU will clear and the cursor will go back to SKU. You can then enter another SKU and its quantities. You would click **[Save]** after each SKU and its quantities are entered.

Click **[Save & Print PO]** or press **[Alt] + [a]** after the last SKU is entered for that PO. The purchase order will print and the screen will clear, which will allow you to enter another Purchase Order.

When looking at an existing PO, click  or press **[Ctrl] + [O]** to view all the SKUs on this PO. Click **[Next SKU]** or press **[Alt] + [N]** to see the next SKU on that PO.

Delete

Display the SKU or PO you wish to delete. Click **[Delete]** or press **[Alt] + [D]** to delete, the screen will then ask if you want to delete the entire PO, **[P]** or the current SKU, **[S]**.

Modifying quantities on order

Display the SKU you wish to change and enter the new quantity you wish to order. Do not enter the plus/minus difference. For example, you have 5 on order, and you need to have 6 on order. Enter a 6. That will become your new on-order quantity then **[Save]**.

Duplicate Purchase Orders

Enter the **Copy PO#** that you want to copy and enter a new **To PO#**, (or accept the default which is one number higher than the last PO number) with the **Bill-to Store #** and **Ship-to Store #**. All date information will default to the original PO dates, but can be overwritten.

Click **[Save]** or press **[Alt] + [S]** to save this information, or Click **[Save & Print PO]** or press **[Alt] + [a]** the purchase order will print and the screen will clear and the information will be saved.

Click "on" or "off" the option for **Storing Labels**, or press **[Alt] + [L]**.

Note: You can go back to Enter Purchase Orders to modify a duplicate purchase order.

Receive Purchase Orders

This screen is used to receive a PO that was entered in Enter Purchase Orders. If you want to receive an SKU that is not on a PO use Enter Manual Receipts.

To Receive a Purchase Order: Enter the

PO Number you are receiving, the PO information will then be displayed, and the first SKU on that PO will be entered, with the original quantity ordered, less any quantity previously received also being displayed.

Storing Labels Click "on" or "off" the option or press **[Alt] + [L]**.

Discount % would be for a volume discount and would lower the entered cost per item.

Freight Each would be a per pair charge and would increase the entered cost per item.

To enter a different SKU on a PO, **with SKU line cleared** (blank) enter the SKU#, or click  or press **[Ctrl] + [O]** to view all the SKUs on this PO.

To clear the SKU click  or press the **[Alt] + [C]** keys at the same time.

[Full] or **[Alt] + [F]** to receive the entire Purchase Order in full with no changes.

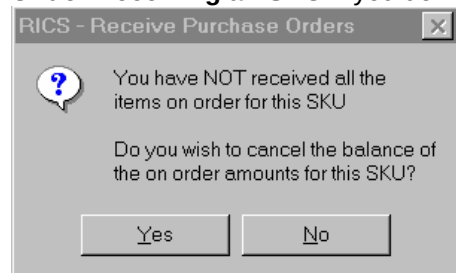

[End PO] or **[Alt] + [E]** only is used when scanning the UPCs to end the PO.

[Scan] or **[Alt] + [A]** before entering PO #, then enter the PO # and scan the UPCs.

[Next SKU] or **[Alt] + [N]** will display the next SKU on the PO.

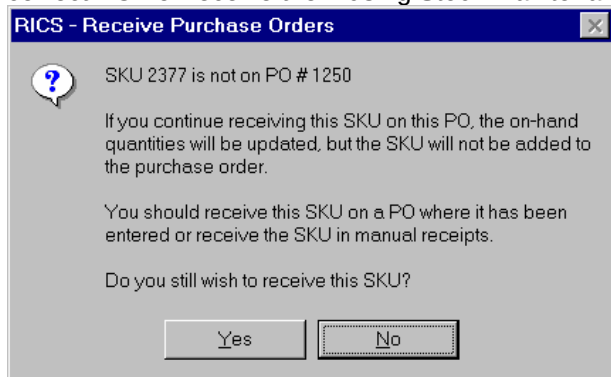

[Delete] or press **[Alt] + [D]** to delete, the screen will then ask if you want to delete the entire PO, **[P]** or the current SKU, **[S]**.

Under Receiving an SKU If you do not receive an SKU in full, the following message will be displayed:

[Yes] will cancel the on-order balance, **[No]** will leave the balance as a backorder.

SKU NOT on a PO An SKU not entered on the PO can be received. However, the SKU will not be added to the PO unless an in-transit Purchase Order is being received. These SKUs should be received under the correct PO# or receive them using *Stock Maintenance - Enter Manual Receipts*.

Over Receipt of an SKU in Error - Re-enter the SKU that was over-received and enter a minus quantity to offset the mistake. For example: four of a size were received when three of that size should have been received. Enter a quantity of a minus one. That entry will take the item out of inventory and put it back on the Purchase Order. However, four labels will print instead of three.

Other Purchase Order Information - After a purchase order is received in full, it is not immediately deleted from the system. Purchase Orders received in full will

stay in **RICS** until you close out the month. If a PO is NOT ever received in full, it will stay in **RICS** until it is received in full, or deleted. It is your responsibility to delete any purchase orders that are no longer valid. The *Purchase Order Reports* could be used to locate those past due purchase orders by printing a ship date range with a blank beginning date, and the ending date being the last day of last month.

After a purchase order has been received, either in full or partial, if you display that purchase order in *Enter Purchase Orders* it will display the original quantities ordered. The purchase order WILL NOT display just what is left on order. To view just what is left on order you have two choices. 1. Run a *Purchase Order Reports* **PO format (open quantities)** 2. View the purchase order *on this screen*.

Combine Purchase Orders

Enter the **Combine PO#** that you want to add to the **Into PO#**. The combine purchase order items will be added to the Into PO# and the Combine PO is deleted from the system.

Click [**Save**] or press [**Alt**] + [**S**] to save this information, or Click [**Save & Print PO**] or press [**Alt**] + [**a**] the purchase order will print and the screen will clear and the information will be saved.

Click "on" or "off" the option for **Storing Labels**, or press [**Alt**] + [**L**].

Note: You can go back to *Enter Purchase Orders* to modify a combined purchase order.

Purchase Orders Reports

Reports on existing Open Purchase Orders

You can use the **Report Options** to:

Sort by: The options are to sort by **Store, PO#**, by **Store, Vendor**, or by **Store, Ship Date**. The report will also show category totals and cash payments projection.

Po's to Print: The options are to print **All PO's**, **At Once PO's**, **Vendor**, or **Future PO's**.

Report to Print: The options are to print:

Complete PO (Report format) will print POs showing the original amount ordered, the amount received, and the open balance.

PO Totals will print PO Totals showing the original amount ordered, the amount received, and the open

balance.

Store Totals will print the Total of POs by Store, showing the original amount ordered, the amount received, and the open balance, by category.

PO format (order quantities) will print your original POs with the original on-order quantities. You'll also have the option to **Print Cost on** and/or **Print Retail Price on PO's**.

PO format (open quantities) will print your original POs with the remaining on-order quantities (to use when checking back orders). You'll also have the option to **Print Cost on** and/or **Print Retail Price on PO's**.

You can use the **Criteria** to select normal criteria selection but you may also:

Print a list of all past due open orders, or a list of all orders due to arrive next month, by selecting **Ship date from ____ to ____**, **Order date from ____ to ____**, **Cancel date from ____ to ____**, **Date Last Received from ____ to ____**.

Open P.O. by Month Report

Reports on existing Purchase Orders by Month

This report can be used to view, spread out by the next 12 months, what and when orders are due to be received.

You can use the **Report Options** to:

Sort by: The report can be summarized by **Vendor**, or by **Category**.

Data to Print: The options are to print the **Open Quantity** on order, the dollar amount on order **Open at Cost** or the dollar amount on order **Open at Retail**.

Date by: This report will print a summary of the open purchase orders by **Ship Date**, **Cancel Date**, **Payment Date**, or spread out between **Ship/Cancel Date Spread**.

Detail to Print: The options are to print the **SKU Detail** or **Category/Vendor subtotals**.

PO's to Print: The three options are to print **All PO's**, **At Once PO's**, or **Future PO's**.

Use Vendor from: The **normal default** is the **SKU File**. The **Purchase Order File** is used if you are buying from someone other than the original vendor. **Example:** You are buying **Nike** from both **Nike** and also a **Jobber**, you could then have orders for the same SKU from two different vendors. This option would allow you to separate who the vendor is that the orders are placed with, where as if you if you ran it by SKU File all the orders would show up as Nike

Combine Stores: Leave unchecked to separate store totals.

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Generate Automatic Purchase Orders

This option will create purchase orders for stores based upon model, on-hand, and on order quantities. For each store, if the on hand quantity plus the order quantity for an SKU is less than the model quantity, the amount short is added to an Automatic Purchase Order.

Before running Automatic Purchase Orders you need to Enter Model Quantities. The model quantity for each store-SKU-column-row combination is the quantity of that item you would like to have on hand. Before running this option you should have entered, printed, and posted all sales transactions so that the on hand quantity for

your stores is current. All Automatic Purchase Orders start with the letter **A**, and are considered **AT-ONCE** orders.

If you have entered maximum quantities in your model quantities, the order quantities generated will bring you to that maximum quantity. Otherwise, the order quantities will bring you to your model quantity. If you have entered reorder amounts in your model quantities, the order quantities generated will be the multiple of that reorder quantity that will bring you up to or over the applicable minimum or maximum quantity.

P.O. Options

Choose whether you want to make purchase orders for selected **Stores** or **Vendors**. For more information about selecting see *Criteria* or *Wild Cards*.

Bill-to-Store is a required field. This is the store that will be listed on the PO as the bill-to store.

Combine to Store – acts as a warehouse or central distributing store for companies with multiple stores. If the Combine to Store is used, the total need is gathered from all selected stores based on the highest model of the selected stores. The on hand amount from the Combine to Store is then subtracted from total quantity short from all of the stores used to get the quantity ordered. This creates a single purchase order for the Combine to Store.

Backorder & **Split shipment** - can be on or off.

Ship, **Cancel**, and **Payment dates** should also be entered.

Automatically Generate Labels should be checked if you want labels printed.

Hint: You can use Enter Purchase Orders option to manually adjust the automatically created PO.

Criteria

P.O. Options	Criteria
Categories	
Seasons	
SKUs	
Groups	
Keywords	

Choose whether you want to order a particular portion of your inventory by selecting **Categories**, **Seasons**, **SKUs**, **Groups**, or **Keywords**. For more information about selecting see *Criteria* or *Wild Cards*.

Replicate the current order without printing the new orders

Enter the Purchase Order you wish to replicate in the **Replicate PO#** field.

(The Bill-to Store, Order date, Ship date, Cancel date and Payment date fields will be filled in with the information from the **Replicate PO#**. You may modify these fields as desired.)

Enter a 5 character prefix that will be assigned to each new purchase order. All the purchase orders that are replicated will contain the 5 character prefix and the ship-to store. For example, if the prefix '**02AUG**' has a purchase order created for store **12** the purchase order number will be '**02AUG012**' (notice that the store number has is padded with zeroes to 3 places).

Enter the store or range of ship-to stores you want to replicate the purchase orders to.

Note: If a purchase order number that would be created is already on file, that purchase order will **NOT** created.

Click **[Save]** or press **[Alt] + [S]** to create the orders, or Click **[Save & Print]** or press **[Alt] + [a]** to create the orders and print a copy of all the purchase orders that have been created.

Click "on" or "off" the option for **Storing Labels**, or press **[Alt] + [L]**.

Note: You can go back to Enter Purchase Orders to modify a replicated purchase order.

In-Transit Order for store # 3 INS CAPS NUM

Enter the Purchase Order you wish to merge the in-transit purchase orders into. The 'Available Purchase Order' list box will be filled with all unreceived in-transit purchase orders which are going to the selected purchase order's ship to-store and from the selected purchase order's bill-to store.

You may modify the ship and cancel dates of the selected purchase order.

Double-clicking on a purchase order will move it to the other list box.

The **[Move >>]** and **[<< Move]** buttons will move all selected purchase orders to the other list box.

The **[Select All]** button will select all the purchase orders in the appropriate list box.

The **[Unselect All]** button will unselect all the purchase orders in the appropriate list box.

Click **[Save]** or press **[Alt] + [S]** to merge the orders, or Click **[Save & Print]** or press **[Alt] + [a]** to merge the order and print a copy of the newly merged order.

Note: The orders that have been merged will no longer exist. All the order quantities will have been combined into the selected purchase order. Once merged, the purchase orders cannot be reclaimed.

Order Worksheet

To prepare your sizes for Future Buys

By using an order worksheet you can ensure you are buying the correct sizes, quantities and Retail \$ Dollars you need for your store before you Enter Purchases Orders. By planning ahead you can greatly improve your ROI% by investing your Open-to-Buy in the right sizes. A key to using Order Worksheets is running Size Type Analysis.

Enter the **Store#**, **Category#**, **Size Type**, **Season**, **Total Order Quantity** (Total # of pairs) and **Total Order at Retail** (Total Retail \$Dollars).

Next enter in the **Projected Sales by Sizes** (The total of all percentages must equal 100). Then click on the **[SKU]** or **[ALT] + [S]** and enter in the **SKU #** (the SKU does not need to be created to do a worksheet this is only a reference), **Retail Price**, and **Month** to be shipped in (number from 1-12), and **[Save]**.

When you select **[Totals]** a report will appear similar to the one below.

SKU	070	075	080	085	090	095	100	105	110	115	120	130
Projected Percentages	2.0	4.0	6.0	8.0	8.0	10.0	12.0	15.0	15.0	10.0	7.0	3.0

Receive ASN Cartons

Receive entire carton with single barcode scan

Receive an entire carton from a vendor by scanning the carton barcode. The barcode is created by the vendor for the carton. The barcode and items in the carton are sent to the store via EDI. When the carton is received at the store, the store scans the barcode and each item in the carton is received. The store also has the option to create a label for each item in the carton.

Carton		Order Date	
PO Number		Ship Date	
Ship-to Store		Cancel Date	
Vendor		Payment Date	
# of Items		☒ Storing Labels	

UPC	SKU	Desc	Col	Row	Qty	Note

To edit the ASN Carton, see [ASN Carton Maintenance](#).

ASN Carton Maintenance

Create, Delete, or Modify Cartons

The ASN Carton Maintenance screen is used to modify the ASN Carton. This should be used with caution because when the ASN Carton is received, the items and quantities of the received items come from the ASN Carton.

To add a new item to the carton, click the **[New]** button. To edit an existing entry, click the **[Edit]** button. To delete an item from the carton, click the **[Delete]** button.

Carton Number	12345678901234567898

Add Job and Run Add Job and Continue Clear Selections Exit

INS CAPS NUM

RICS determines whether your Purchase Orders are At-Once or Future based on whether the difference in the entry date and the ship date is greater than the number of days you determine in RICS.CFG under section [Purchase Orders] items DyFut. The Purchase Orders are also optionally realigned when you close your month. This job afford the user the opportunity to realign orders in the middle of the month or just to change the criteria that determines how many days in advance a future order is.

STOCK MAINTENANCE

Enter Manual Orders

Enter orders without generating a Purchase Order

Use this option to enter manual orders. Both manual orders and purchase orders will update the on-order amounts in the inventory files. However, with manual orders you do not have the other information stored with a PO such as order dates and due dates of specific SKUs so orders are much easier to track if you Enter Purchase Orders. **You probably will not use this option very often.**

Enter Manual Receipts

Receive merchandise not on a Purchase Order

Use this option to receive merchandise **NOT** on a purchase order. **You would also use this option to enter inventory in RICS for the first time.** When this option is used to receive merchandise, it will also update the "date last received" that is displayed in Inventory Inquiry.

Enter the **Store**, and the **SKU**, this will then display the **SKU description, Category, Vendor, Vendor SKU, and Style/Color**. You may also change the **Retail Price** and **Cost**.

Case packs: If you enter a casepack number, the sizes setup for that casepack will automatically be displayed. To enter multiple case packs of the same SKU, use the **X__** field.

Click **Storing Labels**, or press **[Alt] + [L]** to toggle the option to store labels for received items.

Enter the quantities received. After all of the quantities are entered for a SKU click **[Save]** or press **[Alt] + [S]** to save this information. The SKU will clear and the cursor will go back to SKU. You can then enter another SKU and its quantities. You would click **[Save]** after each SKU and its quantities are entered.

Click **[UPC]** or press **[Alt] + [U]** to display a UPC line to scan manual receipts into the computer.

Click **[Change Store]** or press **[Alt] + [G]** to clear the SKU and store and the cursor will go back to **Store**. You can then enter a different Store #.

Enter Manual Returns

Decrease on-hand quantities, or returns to vendors

Use this menu option to decrease the on-hand quantities of selected SKUs. For example, defective items that should be returned to the vendor. The numbers entered here will reduce the on hand amounts in your inventory by the quantity entered. A journal of your transactions will be printed.

Enter the **Store**, and the **SKU**, this will then display the **SKU description, Category, Vendor, Vendor SKU, and Style/Color**. You may also change the **Cost**.

Case packs: If you enter a casepack number, the sizes setup for that casepack will automatically be displayed. To enter multiple case packs of the same SKU, use the **X__** field.

Enter the quantities received. After all of the quantities are entered for a SKU click **[Save]** or press **[Alt] + [S]** to save this information. The SKU will clear and the cursor will go back to SKU. You can then enter another SKU and its quantities. You would click **[Save]** after each SKU and its quantities are entered.

Click **[UPC]** or press **[Alt] + [U]** to display a UPC line to scan manual receipts into the computer.

Click **[Change Store]** or press **[Alt] + [G]** to clear the SKU and store and the cursor will go back to **Store**. You can then enter a different Store #.

Click **[On Hand]** or press **[Alt] + [O]** to show the On-hand quantity for this SKU. You may make changes to these quantities.

Enter Price Changes

Change prices immediately or make future price changes

This option provides a way to: **Immediately change prices**, enter a price change to take place at some **future date**, enter a price change to take place at some **future date and revert back** to the current price at a later date, and to **use different prices for different locations** (contact CSI for more information). You may also use the option *File Setup*, **SKUs** to change prices.

Date to change price: To **immediately change the price** of a SKU, use the default of today's date as the date to change price. To enter a **future price change**, enter the date the price is to change (RICS will inform you of the # of days until the price change is to take effect). The price change then takes effect when you click **[Save]** or press **[Alt] + [S]** to save this information.

Date to change price back: If left blank the Price Change becomes **"PERMANENT"**. You can include a date to automatically have the prices revert back to their pre-sale values after the sale by entering that date (Optional). RICS will inform you of the # of days after the price change is to take effect until it reverts back to the current price.

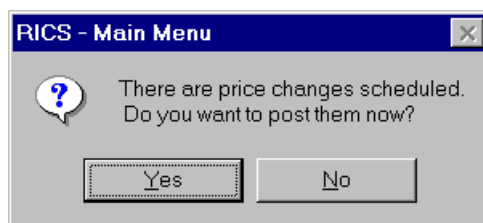

SKU: Enter the SKU (use  or **[Ctrl] + [P]** to lookup a list of existing SKUs) you want to change the price on. It displays the description and current pricing for this SKU.

Click on the current price option (**Retail Price**, **Markdown 1**, and **Markdown 2**) of the desired price or enter the new price. Each of the current price options display the **G.P. %** based on the current cost.

You can make multiple price changes for the same SKU. For example, you could enter a reduced price for a SKU effective March 1, another price reduction effective April 1, and yet another price reduction effective May 1.

You can use *File Printouts*, **Print SKU File**, to print a list of future price changes.

Each morning, when someone logs into **RICS**, the computer will check to see if any "future" price changes should be made today. If so, the following is displayed:

If you click **[Yes]**, the computer will then post the price changes for today. If you press **[No]**, the computer will ask the above question each time someone logs in, until the price changes have been posted (or the file is deleted).

Change Average Cost

Changes the average cost associated with an SKU

RICS will automatically calculate the average cost of a SKU for each store, or all stores whenever needed. If necessary, you can manually adjust this amount using this option.

Enter the **Store**, (Enter zero [0] for all stores) and the **SKU**. This will then display the **SKU description**. You can then change the **Average Cost**.

IMPORTANT: Average cost is used to compute your gross profit. If you receive SKUs at the wrong cost, changing the current cost under *File Setup*, **SKUs** will not correct the average cost. You must also change the average cost.

If you enter sales and post sales for SKUs with the wrong average cost, an incorrect gross profit is calculated. When the average cost is corrected it does not retro-actively correct the past gross profit on sales of the corrected SKU. You must first reverse the sale (as a return) *with the incorrect average cost* and then post the sale. Then correct the average cost, re-enter the sale, and then print and post the sales.

Enter Model Quantities

Setup or change your Model Quantities

Model quantities can be setup for each store/SKU/column/row. A model can be either the desired quantity to maintain on hand or it can be the minimum level reorder point. Model quantities are used in both *Automatic Transfers* and *Automatic Purchase Orders*. When printing the *Stock Status Report*, you have the option to print only those SKUs that are short. This means the quantity on hand has fallen below the model quantity. Entering models is an optional feature. Many **RICS** users create models only for faster moving items, or basic stock that would require fill in orders. You don't have to create models for all SKUs.

Enter Model Quantities

Help

SKU: 2632 ROCKSPORT TIE Category: 110 Men's Casual

Store: 1 A B C Shoes-Downtown Vendor: ROCK Rockport

(Enter '0' for all stores)

Vendor SKU: 2632

Style/Color: TAUPE

Current Cost: 41.00

Average Cost: 41.00

Last Received: 01/11/2002

Case Pack: x

Additional stores to copy the model to:

Model: 2 Max: 4 Reorder: 0 Model Total: 45

	065	070	075	080	085	090	095	100	105	110	115	120	130	140	150	TOT

M				1	2	2	3	2	1	1						12
W					1	2	2	3	3	2	1					14
WW						1	1	2	2	2	1	1				10

Clear Save Delete Model Max Reorder Copy Exit

Model Quantities

INS CAPS NUM

Enter the **SKU**, and the **Store** (Enter zero [0] for all stores. To set model quantities for all stores, except for selected stores such as a warehouse, call CSI.), this will then display the **SKU description**, **Category**, **Vendor**, **Vendor SKU**, **Style/Color**, **Current Cost**, **Average Cost** and date **Last Received**.

Case packs: If you enter a casepack number, the sizes setup for that casepack will automatically be displayed. To enter multiple case packs of the same SKU, use the **x** ___ field.

If you want to enter or adjust the model quantities for multiple stores with one entry, enter the first store to update as "**Store** ___", and then enter the other stores (either individual or ranges, i.e. 2,5-8,11,14) as **Additional stores to copy the model to**. You will have to click in the text area to get into this field.

Enter the Model Quantities that you want. After all of the quantities are entered for a SKU click **[Save]** or press **[Alt] + [S]** to save this information. The SKU will clear and the cursor will go back to SKU. You can then enter another SKU and its Model Quantities. Click **[Save]** after each SKU and its Model Quantities are entered.

In addition to model quantities, RICS supports Maximum (Max) and Reorder Quantities. If a max quantity is entered, RICS will treat all quantities with on-hand below the model quantity as short by the amount it is below the max quantity. Using max quantities is optional and allows you to order or transfer quantities up to the max quantity amount. This can reduce the amount of fill-in orders and transfers needed to replenish stock. Reorder quantities allow Automatic Purchase Orders to order multiple quantities. This can be useful for items like socks that must be orders in groups of 3 or 6.

RICS will always show the model, max, and reorder quantity amounts of the current size. Click **[Max]** or press **[Alt] + [A]** to enter max quantities. Click **[Reorder]** or press **[Alt] + [R]** to enter reorder quantities. Click **[Model]** or press **[Alt] + [M]** to enter model quantities. When either of the **[Max]**, **[Reorder]**, or **[Model]** buttons are clicked, focus remains on the same size. Click **[Copy]**, or press **[Alt] + [O]**, to copy the Max, Reorder, or Model quantities to another type of quantity for the current SKU.

Discontinue SKUs

Discontinue or change an existing SKU #

This option can be used if the vendor changes the SKU number of an item, or to combine (discontinue) several SKUs into a single SKU. **For example:** at the end of a season you decide it is no longer necessary to track the history of several SKUs (perhaps they can no longer be ordered) and it's no longer important to compare how one performed vs. another. You DO NOT want to delete these SKUs and lose the totals on your reports.

Enter the **Store** (Enter zero **[0]** for all stores), under the column **Item being discontinued** enter the **SKU #**, this will then display the **Vendor, Vendor SKU, Category, Size Type, Group, Description, Style/Color, Season, Current Cost, Retail Price, Markdown 1, Markdown 2, and Perks**. None of these items can be changed here.

Under the column **Item retaining information**, enter in the new **SKU #**, This SKU # can either be an inventory item that already exists (in which case the discontinued SKU information is added to this existing SKU) or it can be a brand new item (in which case the item will be added with the discontinued SKU amounts).and press **[Enter]**. This will display the SKU information **Vendor, Vendor SKU, Category, Size Type, Group, Description, Style/Color, Season, Current Cost, Retail Price, Markdown 1, Markdown 2, and Perks**. You may change any of these items, plus the **Current Pricing**.

Click **[Save]** or press **[Alt] + [S]** to save this information after everything is filled in properly. All information about the discontinued SKU (on hand quantity, on order quantity, quantity sales, dollar sales, etc.) will be transferred into the new SKU number with one exception: Model Quantities of the SKU being discontinued will not be added to the new SKU if the new SKU already has activity. When any discontinued SKU is on an Open Purchase Order, the PO will be changed to reflect the new SKU# as still on order.

Before using this option to combine SKUs

Decide which of the following information is important for you to track: **Sales information by vendor, Sales information by category, Sales information broken down by size, all of that information, or none of that information**. The more information you track, the more hash (discontinued) SKUs you will have in **RICS**.

For example, if none of that information was important to keep, you would have one hash SKU to combine everything. If it were important for you to track sales information by vendor broken down by size, you would have a SKU for every vendor/size type combination. If it were important for you to track sales information by just category, you would have one SKU for every category. If all the information was important for you to track, you would have one SKU for every category/vendor/size type combination.

Other important information

Because much of the SKU history is stored by size and width, the SKU being discontinued, and the SKU retaining the information must have the same size type. There is one exception to this rule: if you no longer care about the individual column/row amounts, you can discontinue an SKU with a size type into an SKU with a zero or no size type. The information for all the sizes and widths will be added together and only the totals will be saved.

Hint: It is sometimes convenient to define a category 999 and/or a vendor ZZZZ just for discontinued items. Then, when printing reports indexed by category and/or vendor, the discontinued items will appear at the end of the report and will not be added into other sub-totals.

Inventory Inquiry

Look at SKU's On-hand, On-order, Sales, quantities and other SKU information

Enter a SKU number and press **[Enter]** (You may use  or **[Ctrl] + [P]** to display a list of existing SKUs.).

Enter a **Store** number and press **[Enter]** (You may use  or **[Ctrl] + [P]** to display a list of existing Stores.)
Row is used only for certain Display options for a selected row of an SKU that has multiple rows.

This will display the SKU **Description**, and information on the **Category, Vendor, Vendor SKU, Style/Color, Size Type**, and **Last received** date for this SKU. Displayed in the upper right corner of the screen will be the **Retail Price, Markdown 1, and Markdown 2**, along with the **Average Cost, Current Cost** and **List Price** for this SKU. Sales totals for **Qty, Net, Markdown, Profit**, for the period **Week, Month, Season, and Year** are displayed below that.

The lower half of the screen will display the size grids based on the **Display Options** selected.
Options- This option will allow you to change the displayed quantities. Click **Options** or press **[Alt] + [O]** to display the list of Options A menu similar to the following will be displayed:

RICS - Inventory Inquiry	
Options	Help
✓ On Hand	F2
On Order (Current)	F3
On Order (Future)	F4
Model Quantities	F5
Short Quantities	F6
Month-to-Date Sales	F7
Season-to-Date Sales	F8
Year-To-Date Sales	F9
Column Only	F11
All Stores - On Hand	F12
All Stores - 1 Row	Shift+F1
All Stores Summary	Shift+F2

*Hint: To quickly change the display, press the appropriate function key **[F1]** through **[F12]**, or shift and the appropriate function key. **[Shift]+[F1]** or **[Shift]+[F2]***

[F2] On Hand is the quantity and sizes on hand in the system.

[F3] On Order (Current) is the quantity and sizes on At Once Orders.

[F4] On Order (Future) is the quantity and sizes on Future Orders.

[F5] Model Quantities is the model quantity and sizes entered in the system

[F6] Short Quantities is the model quantity less the on hand quantity. If short is a positive number, on-hand inventory is greater than the model. If short is a negative number, on-hand inventory is less than the model.

[F7] Month-to-Date Sales is the quantity and sizes sold Month to Date.

[F8] Season-to-Date Sales is the quantity and sizes sold Season to Date.

[F9] Year-to-Date Sales is the quantity and sizes sold Year to Date.

[F11] Column only displays the quantity on hand, on order, model, short and MTD, STD and YTD sales for an SKU that does not have rows or for a selected row on an SKU that has multiple rows.

[F12] All stores on hand display the quantity on hand of all stores for an SKU that doesn't have any rows, or for a selected row of an SKU that has multiple rows.

[Shift] + [F1] All stores-1 row displays the quantity on hand, on order, and MTD, STD and YTD sales of all stores for an SKU that doesn't have any rows, or for a selected row of an SKU that has multiple rows.

[Shift] + [F2] All stores-summary displays the total quantity on hand, on order, and MTD, STD and YTD sales of all stores for an SKU, with no column or row information.

[Shift] + [F3] Max Quantities is the max quantity and sizes entered in the system.

[Shift] + [F4] Reorder Quantities is the reorder quantity and sizes entered in the system.

Process in Store Order - When this option is selected (a checkmark appears to the left of the option) and you click the **[Prev]** or **[Next]** buttons, the items are shown in Store, SKU order showing you all SKU's for 1 store, then when the store changes it starts with the first SKU. When this is not selected and you click the **[Prev]** or **[Next]** buttons, each store is display before getting to the next SKU.

Print Directly to Printer (if possible) - When this option is selected (a checkmark appears to the left of the option) and you click the **[Print]** button, the screen is printed directly to the printer, if possible. Otherwise it is printed to a screen spool file.

[Prev] or **[Alt] + [P]** - This option will display the previous SKU#.

[Next] or **[Alt] + [N]** - This option will display the next SKU#.

[UPCs] or **[Alt] + [U]** - This option will display the UPC codes for this SKU.

[POs] or **[Alt] + [S]** - This will display outstanding PO's of the selected SKU. A display box similar to the following will be displayed:

RICS - PO Lookup for SKU 436358975 for store # 1						
Store	PO Number	Ship Date	Cancel Date	Ordered	Received	Open
1	1250	7/15/98	7/31/98	8	0	8
1	1273	8/1/98	8/30/98	8	0	8
1	1294	8/15/98	9/15/98	8	0	8

OK

Page:

[Trend] or **[Alt] + [T]** - This option will display the eight week trending information for the selected SKU. For more information, see Eight Week Trending.

[Info] or **[Alt] + [I]** - This option will display additional information for the selected SKU/Store.

Additional information displays the **Season, Label Code, Group Code, Date 1st Received, Date Last Markdown, Perks,** and **Comments**. Also displayed is the **Last 12 Months Sales** for **Qty** and **Sales \$** listed by **Month** and also **Total**. Included on this screen is **G.P.%, ROI,** and **URNS** for the SKU/Store by **M-T-D, S-T-D,** and **Y-T-D**.

[Detail] or **[Alt] + [D]** - This option will display detailed Inventory Change Detail to see when you have received, returned, transferred, or physically adjusted the inventory of the selected SKU.

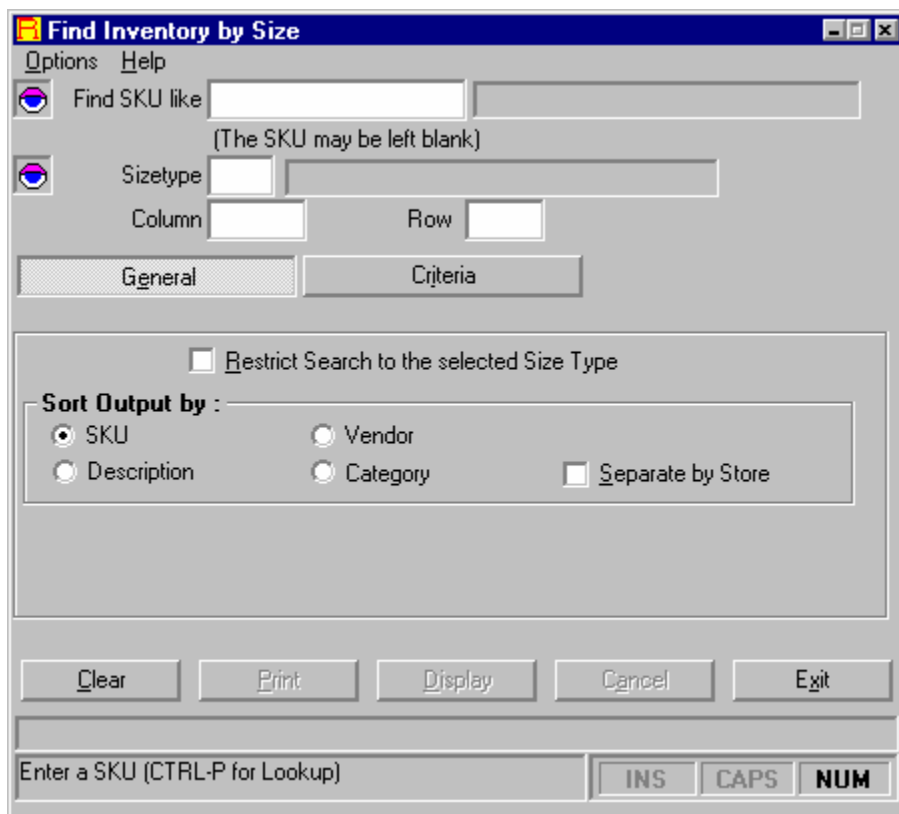

[Print] or **[Alt] + [R]** - This option will print the current screen.

Find Inventory by Size

Displays On-hand SKUs for a Specific Size

Use this option to display SKUs that have an on hand quantity for a specific size. You can limit the choices to a specific range of categories, vendors, and/or style/colors. This will come in handy when a customer wants a SKU that is out of stock and you want to quickly locate a similar, in-stock item.

You can optionally enter a **SKU** number that is similar to the one you are looking for. The computer will then automatically fill in the size type, category, vendor and style/color. Or, you can skip the SKU field and enter the information in the other fields yourself. **(The SKU may be left blank.)**

Enter a **Size Type** number and press **[Enter]** (You may use  or **[Ctrl] + [P]** to display a list of existing Size types.)

Enter a **Column** and **Row** that are valid for this size type.

Categories, Vendors, Styles/Colors and **Stores** are all optional fields that can be used to fine tune your size search.

Click "on" or "off" the option to **Restrict Search to the selected Size Type**, or press **[Alt] + [R]**. When clicked off a search would then find all of that size entered no matter what the size type is in. **Example:** All Size **080**,

Row **M** would show up even though there are three different size types- **Men's**, **Women's** and **Children's** all using the same size.

If you are doing different prices at different stores, there is a RICS.CFG setting to specify the report to display the price from a specific store.

Sort Output by: will sort the list by one of the following options **SKU**, **Description**, **Vendor**, **Category**, with the extra option to **Separate by Store**.

[Print] or **[Alt] + [R]** - This option will print the current screen. The Option menu at the top of the form allows you to print directly to the printer; otherwise it will print to a screen pool file.

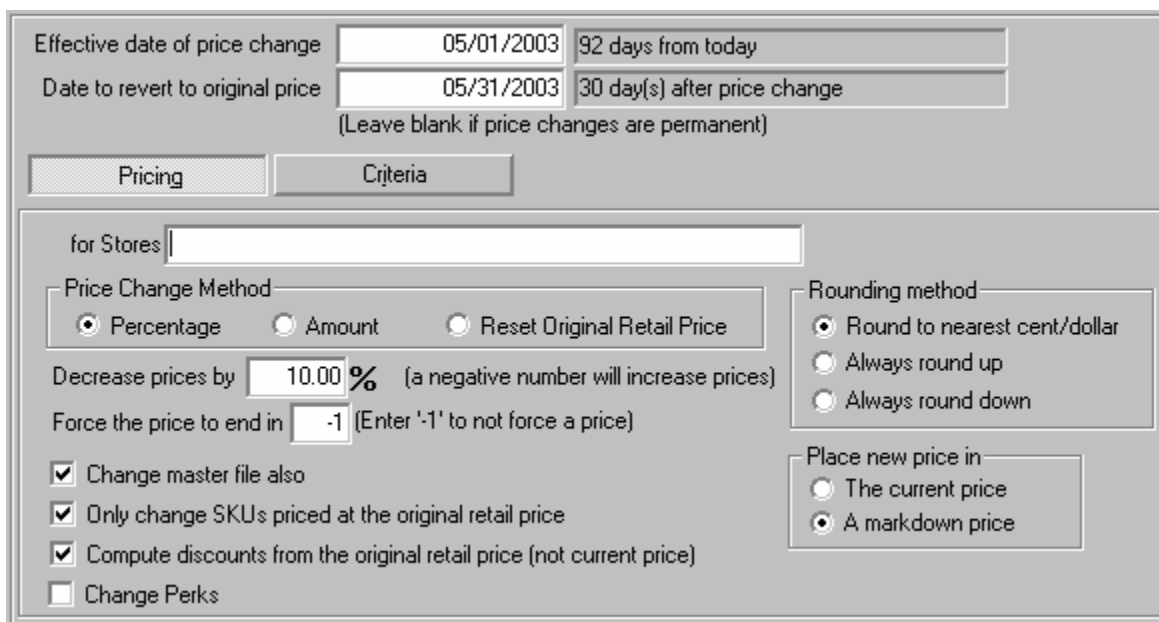

[Display] or **[Alt] + [D]** - This option will display the list on screen.

Enter Price Discounts

Changes Retail Prices by a Percentage or fixed Amount.

This option works like *Enter Price Changes*, only this option will allow you to markdown or markup **all items** in the store, or for selected SKUs, categories, vendors, seasons, colors, or groups in a simple process by a selected percentage or by a fixed dollar amount. You can also force them to end in a set cent (such as .95 or .99). This is an ideal tool for running specials such as \$10 off all Dexter, or 20% all running shoes.

HINT: This program may change the prices for many SKUs, and there is no way to reverse these price changes if you change your mind or select the wrong SKUs. Always make a **backup** of your data first, and you may want to print a Preview report of those SKUs to change to review first.

Effective date of change price: To **immediately change the price** of an SKU, use the default of today's date as the date to change price. To enter a **future price change**, enter the date the price is to change (RICS will inform you of the # of days until the price change is to take effect).

Date to revert to original price: If left blank the Price Change becomes **"PERMANENT"**. Optionally, you can include a date to automatically have the prices revert back to their pre-sale values after the sale, by entering that date. (RICS will inform you of the # of days after the price change is to take effect until it reverts back to the current price).

for Stores: Enter the Stores the price changes will take effect for. This option is only displayed when you have different prices at different stores.

Decrease by: Determine whether the discount will be by a **Percentage**, a fixed **Amount**, or **Reset Original Retail Price**.

Decrease prices by: The percentage or amount of the discount. **(If you want to increase prices, enter a negative number)**

Force the price to end in : If you are discounting a **Percentage**, you have the option to force the resulting changed price to end in a specified decimal amount. Entering -1 in this field will cause RICS to round the price to the nearest decimal amount. This option is used to make all the new prices conform to the pricing conventions of the store. For example, if an item priced 69.99 is going to be discounted by 25%, the new price would be 52.49. However, by entering '99' in the force price field, the resulting price will be 51.99 or 52.99, depending on the rounding method chosen.

Change master file also: This option is only available when you have different prices at different stores. If check, this will update the default prices in the SKU file to the new prices.

Only change SKUs priced at the original retail price: This option will prevent any items currently at a markdown price from being effected by the price discount changes.

Compute discounts from the original retail price (not current price): This option will cause the discount to be calculated from the original retail price (not a markdown). This enables the user to have items 10% off retail, 20% off retail, and 30% off retail without having to calculate discounts of discounts.

Change Perks allows you to set a new dollar amount for the perks.

Rounding Method allows the user to choose how to round the changed price. The choices are to **Round to the nearest cent/dollar, Always round up or Always round down**. Normally, the rounding will be to the nearest penny, but if the **Force the price to end in** option is chosen, the rounding will be done to the nearest amount ending in the decimal chosen.

Place new price in: You may choose to place the new price in the current price (retail or markdown) being used in the first available **markdown price**. **(If all the available markdown price slots are in use, the new price will be placed in the last markdown bucket)**

The 'Criteria' dialog box has two tabs: 'Pricing' and 'Criteria'. The 'Criteria' tab is active. It contains several input fields for selection criteria: SKUs, Categories, Vendors, Seasons, Styles/Colors, Groups, and Keywords. At the bottom, there are five buttons: Clear, Process, Preview, Cancel, and Exit.

Criteria: Enter your selections for **SKUs, Categories, Vendors, Seasons, Style/Color, Groups, or Keywords.**

Click **[Process]** or press **[Alt] + [R]** to save or process the price changes.
YOU MUST MAKE A BACKUP OF YOUR DATA BEFORE PROCESSING.

Click **[Preview]** or press **[Alt] + [P]** to preview the price changes before you process them.

Transfer All Inventory

Transfer all the Inventory in one store to another store

This option will transfer the entire inventory in a store (both positive and negative) from one store to another store. This is ideal for internet stores that sell merchandise but do not carry inventory. The sales can be posted to the internet store and then the after the inventory is reduced from the store (creating negative inventory), this job will create a transfer from a warehouse or brick and mortar store to the Internet store, zeroing out the inventory

The 'Transfer All Inventory' dialog box has a title bar with a red icon and the text 'Transfer All Inventory'. Below the title bar are 'Options' and 'Help' menus. A 'Screen Spool file' label is in the top right. A 'Job Name:' label is followed by an input field. A large blue box contains the following text: 'This job will TRANSFER ALL inventory (both positive and negative) from the selected store into the selected 'To' store. Please contact CSI Services if you do not understand how to use this job.' Below this box are two rows of controls, each with a circular icon and a label: 'Transfer from Store' and 'to Store', each followed by an input field. At the bottom are four buttons: 'Add Job and Run', 'Add Job and Continue', 'Clear Selections', and 'Exit'. At the very bottom are three buttons: 'INS', 'CAPS', and 'NUM'.

The system will always keep this report to the screen spool file, even if you print directly to the printer.

Enter Manual Transfers

Transfer inventory from one store to another

This option is used to transfer inventory from one store to another. The quantity on hand for both stores is updated immediately. The system does not track transfers in transit between stores. A journal will be printed and these transfers will also appear on the Transfer Summary report.

Enter the **From Store**, **To Store**, and the **SKU**. This will then display the **SKU description**, **Category**, **Vendor**, **Vendor SKU**, **Style/Color**, **Current Cost**, **Average Cost**, and **Last received** date for this SKU. When sizes or quantities are entered the system will total them as they are entered.

Click **[UPC]** or press **[Alt] + [U]** to display a UPC line to scan manual transfers into the computer.

Click **[Change Store]** or press **[Alt] + [G]** to clear the SKU and store and the cursor will go back to **Store**. You can then enter a different Store #.

[Transfer All] or press **[Alt] + [A]** to default the screen with all of the on hand quantity of the "from" store.

[Show On-Hand] or press **[Alt] + [O]** to display the "from" store's on hand quantities for the selected SKU.

After entering transfers between stores, an option is available to print a transfer pick list on 8 1/2 by 11" paper, sorted by store. With this option, you can enter all transfers to and from any store, in any order, and when completed, a transfer pick list will sort the entries and print all transfers grouped by each store. This report can then be sent or faxed to each store to instruct them with which items to ship to each other store. If you answer "N", you can enter more transfers at a later time and all transfers will be sorted and printed together.

Generate Automatic Transfers

Automatically transfer inventory from the warehouse to the stores

This option is for users who use a warehouse to receive all their merchandise and update their stores periodically from this warehouse based upon model quantities. This option will calculate the SKUs and quantities to transfer, print a pick list (or transfer journal), and will always print a transfer journal to the screen spool file, and post the transfers to the inventory files. Before running Automatic Transfers you need to Enter Model Quantities. The model quantity for each store-SKU-column-row combination is the quantity of that item you would like to have on hand. Each day, you should have entered, printed and posted all sales transactions so that the on hand quantity for your stores is current. Enter Manual Transfers to reverse any Automatic Transfer transaction.

Sort Report by: Selects how the report will print by **SKU**, **Vendor**, **Category**, or **Location** (Store)

Enter the criteria for **Vendors**, **Categories**, **Seasons**, **Groups**, **Keywords**, **SKUs**, the **Warehouse Store**, and the **Transfer into stores** and run.

Additionally, the transfers may be made into In-Transit Purchase Orders. These transfers will reduce the on-hand levels at the warehouse but must be received at the stores in order to have the transfer completed. To Reverse an Automatic Transfer made into an In-Transit purchase Order, the In-Transit Purchase Order must be cancelled and the transfer amount placed back into the warehouse stores on-hand inventory, either by Manual Receipts or as part of a Physical Inventory. Please contact Technical Support to find out more about In-Transit Purchase Orders.

The lower numbered stores are transferred before the higher numbered stores (i.e., all transfers to store 1 are computed, posted and printed, and then all transfers for store 2 are done, and so on). If you want to transfer to stores in a different order, other than store number order, contact CSI.

To determine what is short in the warehouse, print the Stock Status report excluding the warehouse store,

and print only the short items (quantity on hand is less than the model quantity). This report will list the SKUs that could not be transferred.

If multiple copies of this report are needed, either (a) use multi-part paper or (b) print from the screen spool file. When viewing the report on the screen, any number of copies can be printed. The system will always print the report to the screen spool file, even if you print directly to the printer.

Generate Balancing Transfers

Generate Transfers that move inventory to stores based on ROI, Turns, or Sell Thru

This option is for users with multiple stores. Generate Balancing Transfers calculates the SKUs and quantities to transfer based on ROI, Turns, or Sell Thru sending items from the lowest performing stores to the best performing stores.

Sort Transfers by: ☒ Category ☐ Vendor ☐ SKU	Balancing Method: ☐ Transfer SKUs Over/Under Models (only for SKUs with models) ☐ Transfer SKUs without models ☒ Transfer SKUs without considering models
Transfer based on Sales Period: ☐ Month to date ☐ Season to date ☒ Year to date ☐ Last # of months	Transfer inventory based on: ☒ ROI ☐ Turns ☐ Sell-Thru - When deciding to transfer inventory, give priority to stores with ☐ Turns/ROI/Sell-Thru 0.5 more than another store ☒ Turns/ROI/Sell-Thru 25.0 % higher than another store

When using the **Balancing Method Transfer SKUs Over/Under Models**, only SKUs with a model setup are affected. To setup models, see [Enter Model Quantities](#). The model quantity for each store-SKU-column-row combination is the quantity of that item you would like to have on-hand. Each day, you should have entered, printed and posted all sales transactions so that the on hand quantity for your stores is current. [Enter Manual Transfers](#) to reverse any Generate Balancing Transfer transactions. When this option is selected, SKUs without a model setup are not included in the transfer. If the **Transfer SKUs without models** option is selected, only SKUs without models are included in the transfer. The Transfer SKUs without considering models option considers all inventory items that meet the selection criteria.

Sort Transfers by: Selects the sort order the report print: **Category**, **Vendor**, or **SKU**

Balancing Method selections allow you to choose which method to determine the quantities to transfer. **Transfer SKUs without considering models** (default) and **Transfer SKUs without models** transfer single items to stores that have zero on-hand in a store that is better than a store. Transfer SKUs

Transfer based on Sales Period allows you to select the sales period to calculate the ROI, Turns, and Sell-Thru.

Transfer inventory based on allows you to select which performance monitor you want to base the transfer criteria on (**ROI**, **Turns**, or **Sell-Thru**). The stores' priority is determined based on the selection made here. If there is a decision the computer has to make to transfer the last item and there are more than 1 store to transfer it to, **When deciding to transfer inventory, give priority to stores with** selection provides two options. The first option is **Turns/ROI/Sell-Thru ____ more than another store** where the deciding factor to transfer the item is based on the Turns, ROI, or Sell-Thru being X amount more than another store. The second option is **Turns/ROI/Sell-Thru ____ % higher than another store** where the deciding factor to transfer the item is based on the Turns, ROI, or Sell-Thru being X % more than another store.

☒ Transfer doubles to lower priority stores

☐ Transfer all inventory out of stores that have less than sizes on-hand

☐ Print a journal of what would be transferred without making the transfer

☒ Make the transfers and print the journal

☒ Make In-Transit PO's The current In-Transit P.O. suffix is ('GMJ')

☒ Print In-Transit PO's ☐ Print Columnar PO's

Transfer doubles to lower priority stores is an option that when selected has higher priority stores send an item to a lower priority store if the higher priority store has two or more on-hand and the lower priority store has zero on-hand.

Transfer all inventory out of stores that have less than ____ sizes on-hand is an option that when selected takes inventory out of a store that has less than the specified number of sizes on-hand. Those items are then transferred to other stores.

You can preview the transfers without actually making the transfers by selecting the **Print a journal of what would be transferred without making the transfer** option. This prints a report showing which items are affected by running the Generate Balancing Transfers job with the options and criteria selected.

Make the transfers and print the journal option MAKES the transfers. The **Make In-Transit PO's** option can be checked to make the transfers In-Transit purchase orders. When selected, you also have the option to **Print In-Transit PO's** and if that is checked, the option to **Print Columnar PO's** is also available and when selected does not print the purchase order in the size grid format, but lists each size and column on its own line.

☐ Stores

☐ Categories

☐ Vendors

☐ Seasons

☐ Style/Colors

☐ SKUs

☐ Groups

☐ Keywords

☐ Include only SKUs at the original retail price ☐ Include only SKUs at markdown prices

☐ Include only SKUs with Perks

Enter criteria for **Stores**, **Categories**, **Vendors**, **Seasons**, **Style/Colors**, **SKUs**, **Groups**, and **Keywords**. Click the eye to lookup any of the criteria options and add them to criteria. You have the option to **Include only SKUs at the original retail price** or **Include only SKUs at markdown prices** to further limit the quantity of items in the transfer. You also have the option **include only SKUs with Perks**.

Add the job to Job List by clicking either the **Add Job and Run** or **Add Job and Continue** buttons.

NOTES:

If a SKU has a size with a negative on-hand quantity an exception is printed. No Items are transferred to this SKU for the size with the negative on-hand.

Recommended Transfer Report

*Report for recommended transfers
This report can help you balance your inventory between stores*

The screenshot shows the 'Report Options' tab of a software interface. It contains three main sections: 'Sort Report by:', 'Sales Period to use:', and 'Print based on:'. The 'Sort Report by:' section has three radio buttons: 'Category' (selected), 'Vendor', and 'SKU'. The 'Sales Period to use:' section has three radio buttons: 'Month-to-Date' (selected), 'Season-to-Date', and 'Year-to-Date'. The 'Print based on:' section has three radio buttons: 'Uneven on hand (doubles)', 'High turnover variance of at least', and 'Over/Under Models' (selected). Below this is a checked checkbox for 'Include SKUs with no models'. In the bottom right corner, there is a checked checkbox for 'Print Size Grid'.

Report Options:

Sort Report by: Selects how the report will print by **Category, Vendor, or SKU**.

Sales Period to use: Selects the sales period to report on (**Month, Season, or Year-to-Date**).

Print based on: Selects the method to report by. **Uneven on hand (doubles)** prints SKUs that have two or more on hand of a size at one store and none at another. Selecting **High turnover variance of at least** prints SKUs that are selling at a faster % rate (regardless of size) at one store than they are at another. Example: 500% would print any SKU selling 5 times faster at one store than another. Selecting **Over/Under Models** prints SKUs that are over the model quantity at one store and under the model quantity at another with the option to print SKUs with no models at all.

Check the **Print Size Grid** option to print all the recommended sizes.

The screenshot shows the 'Criteria' tab of the software interface. It features a list of criteria on the left and corresponding input fields on the right. The criteria are: 'Stores', 'Categories', 'Vendors', 'Seasons', 'Style/Colors', 'SKUs', 'Groups', and 'Keywords'. Each criterion has a text input field next to it. The 'Seasons' field is partially filled with a grey bar.

Criteria:

Choose whether you want to select a particular portion of your inventory by **Stores**, **Categories**, **Vendors**, **Seasons**, **Style/Color**, **SKUs**, **Groups**, or **Keywords**. For more information about selecting see *Criteria* or *Wild Cards*. Use the *Lookup* icon to insert a selection.

Transfer Summary Report

Summary Report of transfers

This report prints a monthly transfer summary showing both quantity and cost of items transferred to and from each store.

Click "on" or "off" the option to **Show Detail**. Choosing the Show Detail option will show you the totals for each transfer but not the SKU detail, to see the SKU detail totals for transfers run a [Sales Analysis Report](#) showing SKU Detail and Beginning Balances.

Inventory Detail Report

When inventory on-hand amounts are changed through receiving, returns, transfers, purchase orders, and physical inventory adjustments a record of the transaction is logged. If you want to see how an item reached its current on-hand amount, run the Inventory Detail Report.

INS CAPS NUM

Print activity from _____ **to** _____ limits the dates in the reports.

Check the **Combine Stores** checkbox to show a summary for each SKU combining stores.

The **Sort by** option allows you to sort the records by SKU, by Category and SKU, or by Vendor and SKU.

The **Report Type** option allows you to select the type of detail you want to see in the report. There are five (5) report type options to choose from:

Size Detail shows the SKU information with inventory detail lines by date, type, and size.

SKU Detail shows the SKU information with inventory detail lines by date and type.

SKU Summary shows the SKU information with inventory detail type totals.

Category/Vendor Summary shows the Category/Vendor information with inventory detail type totals

Store Summary shows the Store information with inventory detail type totals

The **Detail Types to Include** checkboxes allow you to check which inventory detail types you want to show in the report. There are six (6) different types to choose from:

Manual Receipts

Purchase Order Receipts

Returns

Transfers In

Transfers Out

Physical Inventory Adjustment

Check the **Include Costs** checkbox to see the cost of the inventory detail items at the time the transaction occurred.

Criteria:

	Seasons	
	Group Codes	
	Keywords	

Choose whether you want to select/print a particular portion of your inventory detail by **Stores**, **Categories**, **Vendors**, **SKUs**, **Seasons**, **Groups**, or **Keywords**. For more information about selecting see Criteria or Wild Cards. Use the Lookup icon to insert a selection.

LABELS

Setup Stock Label Printer

A bar code label is a printed series of vertical bars that vary in width. Bar codes can be "read" and decoded by a bar code scanner. A bar code contains no information about the SKU. The Bar code Cross Reference refers the bar code # to a SKU#, column, and row. (Example: Bar code# 4 2724243415 5 refers to SKU# 47532 in Size 070 Width M). All information (prices, cost, etc.) then comes from what has been entered for that SKU#.

To set up your Stock Label Printer

You only need to setup your printer once, unless you change printers. To setup a printer click: **[Change Printer]**, and select from the list of [Printers Setup in Windows](#). Printers must be setup in Windows before they will be listed here. Make sure you have answered the question "**Automatically generate labels**" in [Company Setup](#) before hand.

Select the label type/size you are using for your printer.

Dot Matrix Printers: select either the **1" X 3 1/2** or **1" X 2 1/2 (1 across)**

Laser Printers: select **Laser or Ink jet (3X10 sheets)** (Avery label #5160)

Zebra* (LP/TLP) Printers: Select **Zebra (LP/TLP)**

Barcode Blazer: Select **Barcode Blazer**

Select the font to use. The fonts listed are the fonts that you have in your computer. Recommended fonts in both compressed and un-compressed are **Courier New**, **Line Printer** or **Lucida Console**. You may want to experiment with some of the other fonts to get a different look to your labels.

Indicate how many copies of each label should be printed. The Number of labels to print will default to 1, but can be up to 9.

***PLEASE NOTE:** Zebra printers were formerly manufactured under the name Eltron. All settings and instructions under either name are interchangeable with regards to appropriate model number.

Enter Stock Labels

To generate labels without affecting inventory

Most people generate labels automatically when they are entering orders or receipts. You can, however, use this menu option to generate labels to print without affecting either on-hand or on-order quantities.

If you use this option after you order or receive merchandise you run the risk of duplicating your labels. In other words, if you were receiving merchandise and "Storing Labels", you DO NOT need to use this option to generate stock labels. You need to answer the question **How are labels to be selected:** one of five ways.

#1- **All SKU's one label for each item on hand** is used to print labels for all SKUs on hand for selected **Stores, Categories, Vendors, SKUs, Groups, Keywords, Season, Date Last Received or Markdown, or Pricing status (retail or markdown)**. For more information about selecting see [Criteria](#) or [Wild Cards](#).

#2- **Selected SKU's one label for each on hand** is used to generate labels for a selected SKU/store. What ever your on-hand quantity is for the selected SKU/store is the number of labels that will print for that SKU. For example, if you selected SKU# 1234 for store 1, and its on-hand quantity was 10, 10 labels will print for that SKU. You can change the default quantities.

#3- **Selected SKU's user enters what labels to print** is used to create labels for a selected SKU/store. You select how many labels you want for each SKU/size. For example, if you selected SKU# 1234, you would choose the quantity of each size that you wanted. This is ideal for an item returned by a customer with no label on it, or when a label was ruined before it was put on the merchandise.

#4- **Purchase Order SKU's one label for each item on PO** is used to create labels for each item on a Purchase Order. Choose whether you want to select/print a particular purchase order by **Stores, Categories, Vendors, SKUs, Groups, Keywords, Season, or Purchase Order**. For more information about selecting see [Criteria](#) or [Wild Cards](#).

#5- **Display labels SKU's one label for each SKU/Store** is used to print 1 label for each selected SKU/Store. You may select SKUs by **Stores, Categories, Vendors, SKUs, Groups, Keywords, Season, Date Last Received or Markdown, Pricing Status (retail or markdown), or select only SKUs that are on-hand**. For more information about selecting see [Criteria](#) or [Wild Cards](#). This option is available to print a custom label for a display rack. For more information, please contact CSI Services.

Print Stock Labels

Prints labels currently in the label file

Label Type - A label code is assigned to each SKU created in [File Setup - SKUs](#). Select the type of label of label you want to print. Items in the label file with the selected code will print.

Label Indent - moves to the right the # of characters entered.

Print date - If checked the current date will print on the label. It will appear after the description in a coded format: the last digit of the year followed by the month in reverse order. For example, March, 1999 would appear as 930.

Printing Format

- **No Price on label:** No price will not print on the label
- **Original Price on label:** The original selling price of the item will print on the label. Even if the item is on sale, the original price will be printed.
- **Current Price on label:** The current selling price of the item will print on the label. If the item is on sale, the sale price will be printed.
- **List Price (no price if List=0):** Prints only List prices or no price if List is blank or 0
- **List Price (original price if List=0):** Prints only List prices or the original price if the List price is blank or 0.
- **List Price (current price if List=0):** Prints only List prices or the current price if List price is blank or 0.
- **Current & List Price:** The current selling price and the list price will print on the label.
- **Original & List Price:** The original selling price and the list price will print on the label.

NOTE: List Price Label may be changed to SUGG, REG., COMP, OUR, etc., up to 4 characters.

Print UPCs - When checked, a UPC barcode will print on the label. **RICS** will automatically assign a UPC number. DO NOT Change starting #.

This is the choice of all new users who will print bar code labels.

Printing Labels - Check to make sure the labels are lined up in the printer properly. Click the **[Test Pattern]** button to print a test label. This can be used to determine if the labels need to be moved up, down, left, or right in the printer. It may be pressed as often as necessary. When the labels are lined up properly, click the **[Print Labels]** button and all labels for the selected store and label code will print.

Laser Printer - A test pattern can not be done with a laser printer. Lasers can use a sheet of labels that is partially used, it will then ask **Start printing labels on row**.

Deleting Labels - Click the **[Delete Labels]** button to delete all unprinted labels. A question will appear confirming that all labels should be deleted.

Common Problems for all Printers:

Printer jams: Press **[Esc]** to cancel printing, adjust the forms and then start printing again. It will not print all labels -- it should resume printing a few labels before the jam occurred. If all labels have been printed and need to be re-printed, **before trying to reprint the labels**, click the **[Restore Labels]** button and then select to print stock labels again and the last batch of labels will print again.

Labels will not print:

1. Make sure the proper store and/or label code is selected.
2. Make sure the printer is turned on and is on-line.
3. Make sure the printer is connected to the computer properly.

Enter UPC Cross Reference

Manually create or look at a UPC cross-reference

This option can be used to manually create a UPC cross-reference, or to look up an existing UPC cross reference. A UPC number represents a single SKU/COLUMN/ROW.

Creating a UPC Cross-Reference - Type in the UPC number to be added to the cross-reference file. Enter in the SKU/COLUMN/ROW that the UPC number represents. Click **[Save]** to save the information.

UPC Cross-reference Lookup: This will determine which SKU/COLUMN/ROW is assigned to a particular UPC number. Enter the UPC number. The SKU/COLUMN/ROW it represents will be displayed. If no SKU information is displayed, the UPC cross-reference has not yet been created for that number.

Import Vendor UPCs

To get vendor UPCs from diskette or thru EDI

This option is used to read a UPC cross-reference diskette (GMAIC format) from the manufacturer, or thru EDI. Before this option can be run, the NRF Codes and the Vendor SKU must be entered for the appropriate size types and SKUs.

File Name - The complete file name is the **drive letter**, **directory name**, and **file name** with **extension**.

Example: C:\UPC\GMAIC.TXT

Drive letter = C:
Directory name = \UPC
File name = \GMAIC
Extension = .TXT

DO NOT read a file that has a ".zip" or ".exe" extension. Files with those extensions are "compressed" files and need to be "de-compressed" before they are processed.

Drive letter - the disk drive containing the UPC cross-reference file. Valid choices are usually 'A', or 'C'. Use the 'A' drive when the file is being processed from a diskette. Select 'C' when the file is on the hard drive.

Directory name - It is recommended that a directory be created for UPC files processed from the hard drive. For example, a directory called **UPC** would be created at the DOS Prompt by typing **[mdlupc]** and pressing **[enter]**. **DO NOT process files in the RICS directory.**

File name - Is the name the vendor gave the file.

Extension - There are usually three different ways vendors provide the UPC cross-reference file: **TXT**, **EXE**, or **ZIP**. The following is more information on each. **Note:** These directions are not exact; they are meant as a reference.

- 1) **TXT** - The file can be read directly from the diskette. For **file name**, just indicate the diskette drive (i.e. A:) place the first diskette in that drive, and click **[Add Job and Run]**.
- 2) **EXE** - The file is compressed in a self-extracting file. A file that is self-extracting usually has an "EXE" extension. In this instance the diskette is copied to the hard drive before it is de-compressed.

For example, at the **C:>** prompt type **[copy a:*. * lupc]** and press **[Enter]**. This would copy the file(s) to the UPC directory in drive C (**Note:** The UPC directory must be created first). Change to the UPC directory once the copy is complete. For example, type **[cdlupc]** and press **[Enter]**. Type in the name of the file contained on the diskette with ".EXE". The file to be read in **RICS** will be "extracted" and renamed. The new file name will usually have a ".TXT" extension.

- 3) **ZIP** - The file is compressed using PKUNZIP. A file compressed with PKUNZIP usually has a "ZIP" extension. In this instance, while the file is unzipped to the hard drive it is un-compressed. For example, with the diskette in the diskette drive, from the **A:>** prompt, type **[pkunzip upc_data.zip c:lupc]** and press **[Enter]** to un-compress the file to a directory called UPC on drive C (**Note:** The UPC directory must be created first). The file to be read in **RICS** will be "Unzipped" and renamed. The new file name will usually have a ".TXT" extension.

If two different vendors use the exact same Vendor SKU number, **RICS** will use the vendor's qualifier and ID from the vendor file to determine which SKU to reference the UPC to.

Note: Many vendors will send many more SKUs on their UPC diskettes than what retailers use in their store. If an NRF code is not found, **RICS** will print an exception report of all invalid UPC entries. The report will print the vendor's description and of that size to help explain or identify the exception. The system will automatically print this sometimes lengthy report to the screen spool file, even if the printer preferences are set to print to your local printer. Use [Look at Screen Spool File](#) to view this report.

You also have the option to **Delete file after import**, or to **Re-import Bar codes that are already on file**, by checking the appropriate boxes.

Print UPC Cross Reference

Prints report on UPC bar codes.

There are two different types of UPCs. The Vendor UPCs where the Vendor gives you a cross-reference file to read their bar codes either by a diskette or thru EDI, or user-generated UPCs where the UPCs are created by the system when you print labels.

Report Options:

Include SKUs that have no Vendor UPCs?:

Yes will list **All SKUs** based upon the selected Criteria.

No will list **ONLY SKUs** with **Vendor UPCs on file** based upon the selected Criteria.

Only print SKUs with no Vendor UPCs will list **ONLY SKUs** with **No Vendor UPCs on file** based upon the selected Criteria.

Print Vendor UPCs when checked on will also print the Vendor UPCs to the selected report.

Print user-generated UPCs when checked on will also print the user-generated UPCs to the selected report.

Criteria: Choose whether you want to select/print a particular portion of your UPCs by **Categories, Vendors, Seasons, SKUs, Style/Color, Size Types, Groups, or Keywords**. For more information about selecting see Criteria or Wild Cards.

Generate UPC Numbers

Generate UPC barcodes for all items in the system

This option will create a UPC barcode for every SKU/Column/Row combination presently in the system. This option would be used so any POS location could then print their barcode labels. **If the POS location is not going to print labels it is not necessary to run this option.**

SALES REPORTS

Overview

Sales Analysis Report - Most commonly used report because of all its options.

Eight Week Trending - Will maintain and report on eight weeks of sales information.

Best Sellers Report - This report can be used to print your best/worst selling SKUs.

Sales History by Month Report - Reports quantities or dollars sold for the current month and each of the last 12 months.

Stock Status Report - This will print reports by Sizes (Column/Row).

Size Type Analysis Report - This will report Analysis by Sizes (Column/Row)

Open-To-Buy vs. Sales Report - This report compares the actual sales for the month and year with planned sales.

Open-To-Buy Report - This report prints a 12 month open-to-buy projection.

General Ledger Summary Report - This report prints the monthly debit/credit totals.

The following are some of the headings listed on reports:

Qty - Quantity.

Retail - The Current Retail Price

Avg. Cost - The Average Cost

Curr Cost - The Current Cost

Mkdn Cost - The Markdown Cost

Value - Total Value of the Quantity at Retail or Cost

%-Str - Percent of store total

%-Rpt - Percent of Report total

Age - Number of days between the date last received and the current date

Sales - Total retail sales less markdowns and returns

Mkdown% - The markdown percent (To determine markdown \$, multiply the **Sales** x **Mkdown %**.)

Profit - Profit (**Sales** less the cost of goods sold)

GP-% - Gross profit percent the percent of **Profit** (divided by) **Sales**

ROI% - Return on investment percentage. Sometimes known as GMROI (Gross Margin Return On Investment) is a combined measurement of how quickly your inventory sold, and how profitable it was. The ROI% is always annualized regardless of what period is being analyzed.

It is strongly recommended that you use ROI% as part of your inventory review, because it is the best overall indicator of performance.

Turns - Turnover rate is a measurement of how quickly your inventory is selling. Turnover is always annualized even if the period analyzed is for a month or season.

V-SKU - Vendor SKU #

Weeks - The number of weeks supply on hand based upon current month sales

Sales Analysis Report

The most commonly used report because of all its options

The sales analysis report always prints the current On-Hand Inventory Quantity, inventory value amounts, and the age of SKUs in addition to any sales information that may be requested.

Report Options:

Analyze by:

- **Category** will list the report in order of the SKUs category
- **Vendor** will list the report in order of the SKUs vendor code
- **Season** will list the report in order of the SKUs season code
- **Group** will list the report in order of the SKUs group code

Store Options:

- **Separate Stores** will print each store separately
- **Compare Stores** will print each store's information for each item. This method provides an easy comparison
- **Combine Stores** will print each item's data for all stores at once

Type of Report:

- **SKU Detail** prints individual SKUs sorted by the 'Analyze by' Option. Each SKU will be on a line by itself. If you select this report type you may summarize the data by SKU description by checking the ☐ Combine SKUs by Description box that will appear
- **Category Summary** prints 1 category per line sorted by the 'Analyze by' Option. Department totals will also be printed
- **Department Summary** prints 1 department per line sorted by the 'Analyze by' Option
- **Style/Color Summary** prints 1 style/color per line as per the SKU file sorted by the 'Analyze by' Option
- **Vendor Summary** prints 1 vendor per line as per the SKU file sorted by the 'Analyze by' Option
- **Price Point Summary** allows you to analyze the price points within the 'Analyze by' option or **Store Totals Only**. You will be asked to determine the price points to analyze by entering a **Beginning Price Point**, a **Price Increment**, and an **Ending Price Point**.
- **Season Summary** prints 1 season per line as per the SKU file sorted by the 'Analyze by' Option
- **Group Summary** prints 1 group code per line as per the SKU file sorted by the 'Analyze by' Option.

Report Options	Criteria	Values and Dates	Printing Options	Trending Options
----------------	----------	------------------	------------------	------------------

	Stores	
	Categories	
	Vendors	
	Seasons	
	Style/Colors	
	SKUs	
	Groups	
	Keywords	

☐ Include only SKUs at the original retail price ☐ Include only SKUs at markdown prices
☐ Include only SKUs with Perks

Criteria:

Choose whether you want to select/print a particular portion of your inventory by **Stores**, **Categories**, **Vendors**, **Seasons**, **Style/Color**, **SKUs**, **Groups**, or **Keywords**. For more information about selecting see Criteria or Wild Cards. Use the Lookup icon to insert a selection.

You may also choose to include only SKUs priced at the original retail price or SKUs prices at a markdown price by checking the appropriate check box. Leave both unchecked to include SKUs regardless of the current price. The other option is to include SKUs with perks which shows only items with a sales perk.

Report Options	Criteria	Values and Dates	Printing Options	Trending Options
----------------	----------	------------------	------------------	------------------

Show Percentages : (Sales, Profit, Value) ☐ Percent of store ☐ Percent of Report ☒ No Percents	Value On-Hand Inventory at : ☐ Retail Price ☒ Retail Price and Average Cost ☐ Average Cost ☐ Retail Price and Current Cost ☐ Current Cost ☐ Markdown Cost
--	---

Date Last Received from to Date First Received from to	Age by: ☐ Date Last Received ☒ Date First Received
---	--

Values and Dates:

Show Percentages:

RICS can show you a percentage of each line item's on-hand value, sales, and profit as compared to the total of your choosing.

Percent of Store compares the line items to the entire store, even items not selected to print.

Percent of Report compares the line items to what has been selected to print for this store.

No Percents prevents any percentages from printing. Choosing this report will make your report run faster.

Value On-Hand Inventory at:

RICS can show you the value of your on-hand inventory in the following ways

Retail Price values your inventory by the current retail price of each SKU.

Average Cost values your inventory by the average cost of each SKU.

Current Cost values your inventory by the current cost of each SKU.

Markdown Cost computes market value of inventory that has been marked down from its original retail price.

This figure is sometimes used as the inventory valuation for accounting purposes. If an SKU does not

have a markdown retail price, then markdown cost will equal the current cost. Otherwise, the markdown cost is computed by taking the markdown price and dividing by the original retail price. That total is multiplied by the current cost. The result is markdown cost.

Retail Price and Average Cost or **Retail Price and Current Cost** will value your inventory by the current retail price and the average or current cost of each SKU. When running the report by one of these two options you will be able to select only one of the **Printing Options**.

Aging Options:

Date Last Received selects only those SKUs that have been last received in the specified date range.

Date First Received selects only those SKUs that have been first received in the specified date range.

NOTE: When comparing or combining stores, the date first received for an SKU will be considered the **earliest** date first received for any store and the date last received will be considered the **latest** date last received for any store. The SKUs data will be printed for all the stores or the SKU will not be printed at all. The dates an SKU is first and last received can be set by transferring merchandise if the user has selected to activate that option.

Age by allows you to age the merchandise by the date first received or the date last received. This option is only available when printing SKU detail.

Printing Options:

You may not select more than two of the **Print Selections**.

Week-to-Date prints the sales totals for Week-to-Date. You may not choose Prior Year or Inventory Summary.

Month-to-Date prints the sales totals for Month-to-Date. You may not choose Inventory Summary.

Season-to-Date prints the sales totals for Season-to-Date. You may not choose Inventory Summary.

Year-to-Date prints the sales totals for Year-to-Date. You may not choose Inventory Summary.

Prior Year prints the prior year Month-to-Date, prior year Season-to-Date, or prior year Year-to-Date totals depending on which sales period you selected. If you are in the middle of a month and run a prior year report, the report will give you the totals through the entire month of last year. You may not choose Inventory Summary, On order amounts, or Last number of months when this printing option is selected.

Inventory Summary allows you to review the inventory activity for **Month**, **Season**, or **Year to date**, and by **Quantity**, **At Costs**, or **At Retail** (when run by month to date) showing Beginning Balance, Receipts, Sales, Returns, Transfers In, Transfers Out, Physical Inventory Adjustments, Markdowns, and Ending Inventory along with Sell Thru Percentages.

On Order amounts prints on order quantities and amounts with options for **At-Once**, **Future**, or **In-Transit Orders**. However, **In-Transit Orders** cannot be combined with any other type of purchase order on this report.

Last number of months requires you to answer the **How many months (2-12) question**. Enter the number of months from 2 to 12 that you want this report for. The current month is included in one of the months

selected. For example, if the last 2 months were selected, this will print the current month and the last month combined.

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Trending Options:

This will give you the option to print the 8-week trending information for each line item when you check the **Include 8 week trending** box.

If you are printing SKU detail you will also be able to select SKUs having a **Weekly** or **Period sell thru % Greater than or Less than ____% for ____ of the last ____ weeks**. **Example:** You could run a report to show any SKU with a sell thru percent that was greater than 15% for 3 of the last 4 weeks (up to 8 weeks). For more information see Eight Week Trending. Note that when comparing or combining stores, the trending for all stores are combined and then checked against the trending criteria before the SKU is printed. The SKUs data will be printed for all the stores or the SKU will not be printed at all.

Eight Week Trending

Will maintain and report on eight weeks of sales information

RICS can maintain eight weeks of sales information (Current + the prior 7 weeks). You can view the total number sold, inventory adjustments, sell thru percentages, and weekly supply on-hand. This information can be printed in a Sales Analysis Report or "viewed" in the Inventory Inquiry for any SKU. It also provides you with two types of **sell through percentages (Weekly or Period)** for the current week and the last seven weeks. This information can be used to spot and adjust to trends in your sales and inventory.

IMPORTANT NOTE: You must always Close Week each and every week, on the same day each week for 8 week trending to track accurately. You may want to use Reminders to give you a reminder every seven days to close out your week.

8-week trending format: Below is a sample format of what the eight-week trending may look like on the Sales Analysis report, or from Inventory Inquiry.

	7	6	5	4	3	2	1	Curr
Avail/Week	-	34	28	23	32	27	85	75
Avail/Period	-	34	34	34	32	32	85	85
Rec/Tran/Adj	-	34	-	-	14	-	63	-
Sales	-	6	5	5	5	5	10	10
ST%/Weekly	-	17.6	17.9	21.7	15.6	18.5	11.8	13.3
ST%/Period	-	17.6	14.7	14.7	>15.6	15.6	>11.8	11.8

The > (greater than sign) next to some of the period sell through percentages indicates that your period "reset" on that week. An inventory adjustment (**Rec/Tran/Adj**) "resets" the period. A Period is the length of time between inventory adjustments.

Avail/Week = Total Available On-Hand Inventory for Week (Weekly beginning balance + **Rec/Tran/Adj** for that week)

Avail/Period = Total Available On-Hand Inventory for the Period (Period beginning balance + Total of **Rec/Tran/Adj** for all weeks thru the current week)

Rec/Tran/Adj = Any receipts (PO or Manual), returns to vendors, transfers (In or Out), or inventory adjustments (+ or -), but NOT A SALE or Customer Return.

Sales = All SALES, Lay-a-way sales, special order pickups, or Customer Returns (-).

ST%/Weekly = Weekly Sell through Percentage (The percentage of what sold that week (**Sales**) divided by the Total Available On-Hand Inventory for that week (**Avail/Week**)).

ST%/Period = Weekly Sell through Percentage (The percentage of what sold that week (**Sales**) divided by the Total Available On-Hand Inventory for that period (**Avail/Period**)).

Example: ST%/Weekly Calculation - In week **5** you sold a quantity of **5** (**Sales**) and Available inventory to sell for the week is **28** (**Avail/Week**) $5 / 28 = 17.9\%$

Example: ST%/Period Calculation - In week **4** you sold a quantity of **5** (**Sales**) and Available inventory to sell for the period is **34** (**Avail/Period**) $5 / 34 = 14.7\%$

Example: ST%/Period > Reset Calculation - In week **3** you have a beginning on hand inventory of **18** (Week 4 **Avail/Week** of **23** minus Week 4 **Sales** of **5**, $23 - 5 = 18$) you receive (**Rec/Tran/Adj**) a quantity of **14**. The **Avail/Period** week **3** is then rest to **32**, ($18 + 14 = 32$)

Best Sellers Report

This report can be used to print your best or worst selling SKUs

This report can be used to print your best or worst ranking SKUs, ranked by quantity sold, dollars sold, dollars profit, ROI%, Turns, On-Hand Inventory Value, or Sell-Thru percentage.

Report Options Criteria Export Options

Best :

- ☐ SKUs by Category
- ☐ SKUs by Vendor
- ☐ SKUs
- ☐ Vendors
- ☐ Categories
- ☐ Stores
- ☒ SKUs by Group

In order of :

- ☐ Quantity Sold
- ☒ Net Sales
- ☐ Profit
- ☐ ROI %
- ☐ Turns
- ☐ Inventory Value
- ☐ Sell Thru %

In sales period :

- ☐ Week to date
- ☐ Month to date
- ☐ Season to date
- ☒ Year to date
- ☐ Last # of months

Print which items :

- ☐ All items
- ☒ Top number of items
- ☐ Best above a cutoff point
- ☐ Worst below a cutoff point

Top # to print

Print Inventory value by :

- ☒ Retail Price
- ☐ Average Cost
- ☐ Current Cost

☐ Combine Stores

Report Options:

Best: (Select what you want to rank)

- **SKUs by Category** - the SKUs are ranked within their respective category
- **SKUs by Vendor** - the SKUs are ranked within their respective vendor
- **SKUs** - the report ranks all SKUs irrespective of category, vendor, or group
- **Vendors** - the report ranks each vendor's totals
- **Categories** - the report ranks each category's totals
- **Stores** - the report ranks each store's totals
- **SKUs by Group** - the SKUs are ranked within their respective group code

In order of: (Select how the ranking is to be performed)

- **Quantity Sold** - the number of items sold
- **Net Sales** - the total retail sales less markdowns and returns
- **Profit** - total **Sales** less the cost of goods sold
- **ROI%** - the return on investment percentage
- **Turns** - the Turnover rate of your inventory
- **Inventory Value** - the value of your on-hand inventory valued by the 'Print Inventory Value' option
- **Sell-Thru %** - the quantity sell thru rate for the selected period

In sales period:

Select the sales period the report is ran of the following options: **Week, Month, Season, Year-to-date**, or **Last # of Months**. For Last # of Months, the number of months **must be between 2 and 12** (If you are ranking by Inventory Value, this option will just print the selected period's sales data).

Print which items:

- **All items** - based on the desired selections, will be sorted from highest to lowest number.
- **Top number of items** - the top number of items to print based on the number entered.
- **Best above a cutoff point** - a selected cutoff point that only items above that cutoff would print.
- **Worst below a cutoff point** - a selected cutoff point that only items below that cutoff would print.

Print Inventory value by:

Select how the report values the inventory and sales: **Retail Price, Average Cost, or Current Cost**

Check on **Combine Stores** to combine all stores data.

Report Options Criteria Export Options

☐ Stores

☐ Categories

☐ Vendors

☐ Seasons

☐ Groups

☐ Style/Colors

☐ SKUs

☐ Keywords

☐ Include only SKUs at the original retail price ☐ Include only SKUs at markdown prices

☐ Include only SKUs with Perks

Criteria: Choose whether you want to select/print a particular portion of your inventory by **Stores, Categories, Vendors, Seasons, SKUs, Style/Colors, Groups, or Keywords**. For more information about selecting see *Criteria* or *Wild Cards*. Use the Lookup icon to insert a selection.

Another option is to include only SKUs priced at the original retail price or SKUs prices at a markdown price by checking the appropriate check box. Leave both unchecked to include SKUs irrespective of price. The other option is to include SKUs with perks which shows only items with a sales perk.

Report Options Criteria Export Options

☐ Export as comma delimited file

Export Filename

Export Options:

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Sales History by Month Report

Reports quantities or dollars sold for the current month and each of the last 12 months

You can use this report to spot trends or determine monthly requirements for future orders

Report Options: Select bestseller sales information by:

Sort by:

- **Vendors** - lists the report in order by Vendors, alphabetically
- **Categories** - lists the report in order by category numbers

Data to Print:

- **Quantity Sold** - the number of items sold
- **Net Sales** - the total retail sales less markdowns and returns
- **% of Store Sales** - the % of the stores total sales

Detail to Print:

- **SKU Detail** - lists each SKU based upon the selected criteria
- **Category/Vendor Subtotals** – summarizes; NO SKUs print, just subtotals
- **Department Summary** – summarizes; NO SKUs print, just Department totals

Check on **Combine Stores** to combine all stores data.

Criteria:

Choose whether you want to select/print a particular portion of your inventory by **Stores, Categories, Vendors, Seasons, Style/Colors, or Groups**. For more information about selecting see Criteria or Wild Cards.

Export Options:

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Stock Status Report

This prints reports by Sizes (Column/Row)

This report can be used to print quantities by column/row (size/width, color/size, waist/length, etc.) and works well when used in conjunction with the Sales Analysis report.

Report Options:

The screenshot shows a dialog box titled 'Report Options' with four tabs: 'Report Options', 'Criteria', 'Printing Options', and 'Aging Options'. The 'Report Options' tab is active. It contains two main sections: 'Sort by:' and 'Store Options:'. The 'Sort by:' section has three radio buttons: 'Category' (selected), 'Vendor', and 'Location'. The 'Store Options:' section has five radio buttons: 'Separate Stores' (selected), 'Compare Stores', 'Combine Stores', and 'Store Summary'. To the right of these sections is a larger section titled 'Select which inventory items' with eight radio buttons: 'All items' (selected), 'Only short items', 'Only items that are critical', 'Only items that are on order', 'Only items with a negative on-hand quantity', 'Only items with models', 'Only items with less than [text box] sizes On-Hand', and 'Only items with Week-to-Date sales'.

Sort by:

- **Category** - the SKUs are sorted within their respective category
- **Vendor** - the SKUs are sorted within their respective vendor.
- **Location** The SKUs are sorted within their respective location.

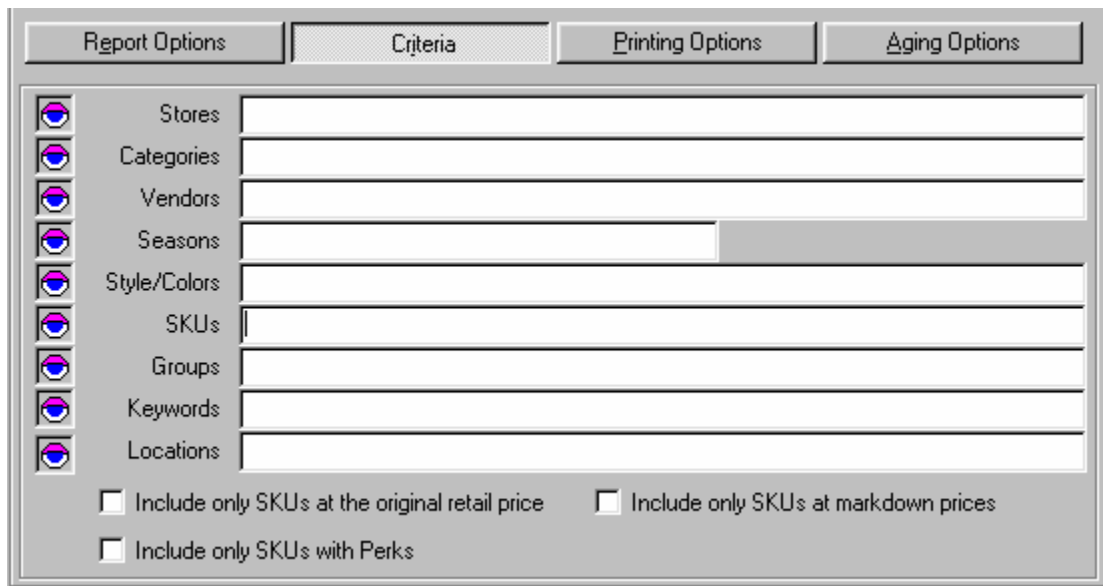

Store Options:

- **Separate** - prints all SKUs for each store in store order with size detail
- **Compare** - prints each store separately for each SKU in SKU order for easy comparison with size detail
- **Combine** - prints the combined summary for all stores with size detail
- **Store Summary** - prints the store totals only for each selected SKUs without a size grid. Great for multi-store comparisons when size detail is not needed.

Select which inventory items:

- **All items** - based on the desired selections
- **Only short items** - lists only inventory items that are short (on hand is less than model stock)
- **Only items that are critical** - lists only inventory items that are critical (on hand is less than model stock and is not on order)
- **Only items that are on order** - lists only inventory items that are currently on order
- **Only items with a negative on-hand quantity** - lists only inventory items having a negative on-hand quantity
- **Only items with models** - lists only inventory items having model quantities entered
- **Only items with less than ____ sizes On-Hand** - lists only inventory items having less than "X" number of sizes left on-hand. A great tool for odds and ends.
- **Only items with Week-To-Date sales** - lists only inventory items having sales in the current week

Criteria:

The 'Criteria' dialog box features four tabs: 'Report Options', 'Criteria', 'Printing Options', and 'Aging Options'. The 'Criteria' tab is active, showing a list of selection criteria on the left and corresponding text input fields on the right. The criteria are: Stores, Categories, Vendors, Seasons, Style/Colors, SKUs, Groups, Keywords, and Locations. Each criterion has a small circular icon with a magnifying glass to its left. Below the input fields, there are three checkboxes: 'Include only SKUs at the original retail price', 'Include only SKUs at markdown prices', and 'Include only SKUs with Perks'.

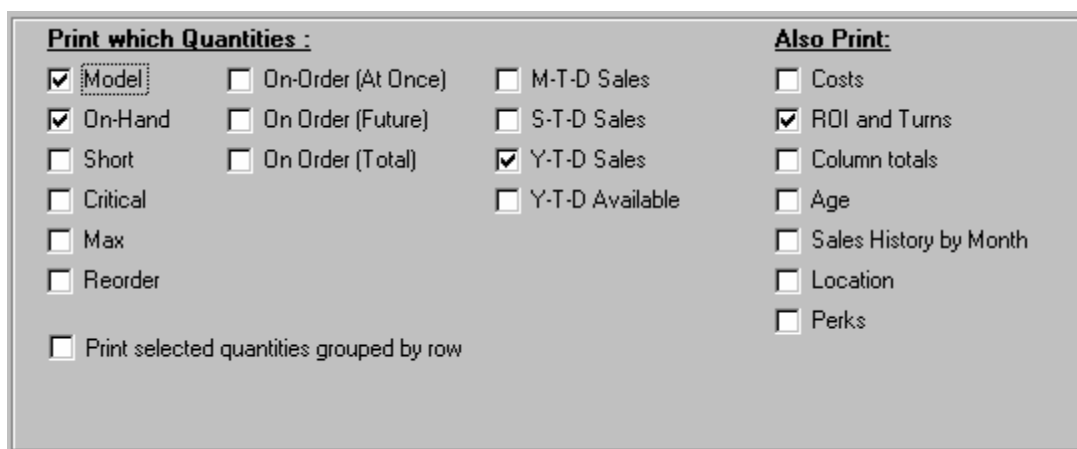

Criteria	Input Field
Stores	
Categories	
Vendors	
Seasons	
Style/Colors	
SKUs	
Groups	
Keywords	
Locations	

☐ Include only SKUs at the original retail price ☐ Include only SKUs at markdown prices
☐ Include only SKUs with Perks

Choose whether you want to select/print a particular portion of your inventory by **Stores, Categories, Vendors, Seasons, Style/Colors, SKUs, Groups, Keywords, or Locations**. For more information about selecting see [Criteria](#) or [Wild Cards](#). Use the Lookup icon to insert a selection.

You may further limit the SKUs selected to SKUs that provide **Perks** to salespeople and SKUs that are priced at the **original retail price** or at a **markdown price**. If your RICS system has different prices at different stores, you may not use the pricing options unless you are separating stores.

Printing Options:

The 'Printing Options' dialog box is divided into two main sections: 'Print which Quantities :' and 'Also Print:'. The 'Print which Quantities :' section contains a grid of checkboxes for various quantity types, with 'Model' and 'On-Hand' checked. The 'Also Print:' section contains checkboxes for additional information to be printed, with 'ROI and Turns' checked. At the bottom, there is a checkbox for 'Print selected quantities grouped by row'.

Print which Quantities :			Also Print:
☒ Model	☐ On-Order (At Once)	☐ M-T-D Sales	☐ Costs
☒ On-Hand	☐ On Order (Future)	☐ S-T-D Sales	☒ ROI and Turns
☐ Short	☐ On Order (Total)	☒ Y-T-D Sales	☐ Column totals
☐ Critical		☐ Y-T-D Available	☐ Age
☐ Max			☐ Sales History by Month
☐ Reorder			☐ Location
☐ Print selected quantities grouped by row			☐ Perks

You may select any number of the **Printing Options**.

Print which Quantities:

- **Model** - prints the model quantities entered for the SKUs
- **On-Hand** - prints the On-Hand quantities for the SKUs
- **Short** - prints the short quantities (on hand is less than model stock)
- **Critical** - prints the critical quantities (on hand is less than model stock and is not on order)
- **Max** - prints the maximum model quantities for the SKUs
- **Reorder** - prints the reorder quantities

- **On Order** - prints on order quantities with options for **At-Once, Future, or Total**
- **M-T-D Sales** - prints the sales totals for Month-to-Date
- **S-T-D Sales** - prints the sales totals for Season-to-Date
- **Y-T-D Sales** - prints the sales totals for Year-to-Date
- **Y-T-D Available** - the quantity on-hand at the beginning of the year plus all changes (ex: receipts, transfers, returns)

Also Print:

- **Costs** - prints the average cost for each SKU
- **ROI and Turns** - prints the ROI and Turns for the selected sales period
- **Column Totals** - prints the totals for each size column
- **Age** - prints the number of days since the merchandise was first brought into the store (Date First Received) or the number of days since the merchandise was last received (Date Last Received)
- **Sales History by Month** - prints the last 12 months of sales for the SKU (all sizes included)
- **Location** - prints the location entered on the SKU File maintenance screen
- **Perks** - prints the amount perk to the salesperson for selling the item

Aging Options:

Report Options	Criteria	Printing Options	Aging Options
Date Last Received from to Date First Received from to			

Date Last Received - selects only SKUs last received between the specified dates

Date First Received - selects only SKUs first received between the specified dates

NOTE: When comparing or combining stores, the date first received for a SKU will be considered to be the **earliest** date first received for any store and the date last received will be considered to be the **latest** date last received for any store. The SKUs data will be printed for all the stores or the SKU will not be printed at all. The dates a SKU is first and last received can be set by transferring merchandise if the user has selected to activate that option.

Size Type Analysis Report

This Analyzes by Size Types (Column/Row)

The key to this report is timing. It should be run periodically during the year and at the end of the season before any large-scale markdowns. The intent is to determine which columns/rows are selling at the best rate and which columns/rows are over or under stocked. If a sell thru percentage for the season is 10%, it would be safe to say that particular column/row was overstocked. On the other hand, if the sell thru percentage was 100%, you might have been under stocked and losing potential sales. A key consideration is your size type file. This report will only combine percentages on like size types. Therefore, the more different size types you use, the more totals there will be on this report to analyze.

It can be used to determine the best selling columns/rows (sizes/widths, colors/size, waist/length, etc.) by reviewing the sell thru percentage for each vendor or category. You can also check next season's future orders to see if you ordered the right sizes by running on-order (Future) quantity. Check by color and size (ex: white shoes on order), to compare with a previous report to see if on order quantities reflect previous sell thru %.

Report Options:

Sort by:

- **Category** - SKUs are sorted by their respective category
- **Vendor** - SKUs are sorted by their respective vendor
- **Combine** - prints the combined summary for all stores
- **Print SKU Detail** - prints detail for each SKU (this could be a very lengthy report)

Criteria:

Choose whether you want to select/print a particular portion of your inventory by **Stores, Categories, Vendors, Seasons, Style/Colors, SKUs, Groups, or Keywords**. For more information about selecting see Criteria or Wild Cards.

Printing Options:

Print:

- **On-Hand** - prints the On-Hand **Quantity** and/or **% of Total**
- **On-Order (At-Once)** - prints the At-Once On-Order **Quantity** and/or **% of Total**
- **On-Order (Future)** - prints the Future On-Order **Quantity** and/or **% of Total**
- **On-Order (Total)** - prints the Total On-Order **Quantity** and/or **% of Total**
- **Sales** - prints the **Quantity** sold and/or **% of Total** sold, and/or **Sell thru %**. Sell thru percent is the percentage of your inventory that was available for sale that sold.
- **Available** - prints the Available **Quantity** and/or **% of Total**. Available is the quantity that was on-hand at the beginning of the year plus all changes (i.e. receipts, transfers, returns).

Open-To-Buy vs. Sales Report

This report compares the actual sales for the month and year with planned sales

This report compares the actual sales for the month and year with planned sales. It gives you a feel for whether your planned sales have been accurate for the last several months. Using this information, you can adjust your planned sales, which is important for the O-T-B report. You need to set up an [Open-To-Buy Plan](#) before running this report.

You may select **Stores** and/or **Categories** for this report.

If you choose not to **Include Category Totals**, only department and store totals will be printed.

Open-To-Buy Report

This report prints a 12 month Open-to-Buy projection

This report prints a 12 month open-to-buy projection based upon planned sales, turnover, and gross profit percentage showing last years' sales, planned sales, required beginning of month inventory, on order, and open-to-buy (at retail, cost and quantity). You need to set up an [Open-To-Buy Plan](#) before running this report.

You may select **Stores** and/or **Categories** for this report.

If you choose not to **Include Category Totals**, only department and store totals will be printed.

You may also select to combine **Stores** for this report.

General Ledger Summary Report

This report prints the monthly debit/credit totals

This report prints the monthly debit/credit totals for the different accounts and can then be entered into your general ledger system. These account totals include **Cash, Non-Cash, House Accounts, Special Orders, Layaways, Gift certificates, Sales Tax, Sales, Cost of Goods Sold, Other Charges, Payouts, and Over/Short.**

You may select only **Stores** for this report.

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Create NPD Export File

Exports the Inventory On Hand and On Order Quantities

This job is used to output a file of SKUs with either monthly sales or on-hand quantities into a format that can be read by the NPD Group. NPD is working with the NSRA to create compiled retail sales reports. **In order to run this job, you must have a NPD-assigned ID code**. An audit file will also be generated in RICS to allow you to verify the information being exported. The job is designed to be run at month-end. The following options are available:

Export Options Criteria

Export file name: \\RICS73\\NPDEXP.TXT

This job will export your sales and on-hand inventory information in a NPD compatible format.

Your NPD ID is (RICS).

Export Options:

Export file name: This is the path and file name of the export file that will be created from running this job. If the created file has an extension of 'ZIP', the exported file will be called NPDFILE.TXT and will be compressed into the selected file name. Otherwise, the created file must have an extension of 'TXT'.

Export Options Criteria

Stores

Categories

Vendors

Seasons

Style/Colors

SKUs

Groups

Keywords

Criteria:

Choose whether you want to limit your export to a particular portion of your inventory by **Categories, Vendors, Seasons, Style/Colors, SKUs, Groups, or Keywords**. For more information about selecting see Criteria or Wild Cards.

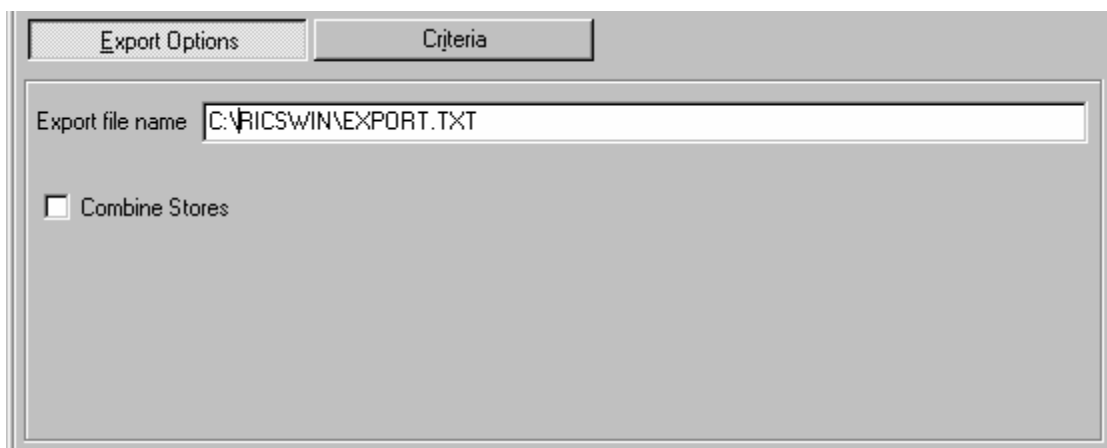

Export Inventory Quantities

Exports the Inventory On Hand and On Order Quantities

This job will export your SKU information, including on hand and on order quantities into a Comma-delimited file. This file can then be loaded into spreadsheets, database programs, or even to your internet store provider for further processing.

Information exported:

Store, SKU, Size Row, Size Column, On Hand Quantity, On Order Quantity (Current), On Order Quantity (Future), Current Selling Price, Vendor Code, Category, Vendor SKU, Vendor Color Code, Description, Style Color, Season Code, Group Code, Size Type, UPC Code.

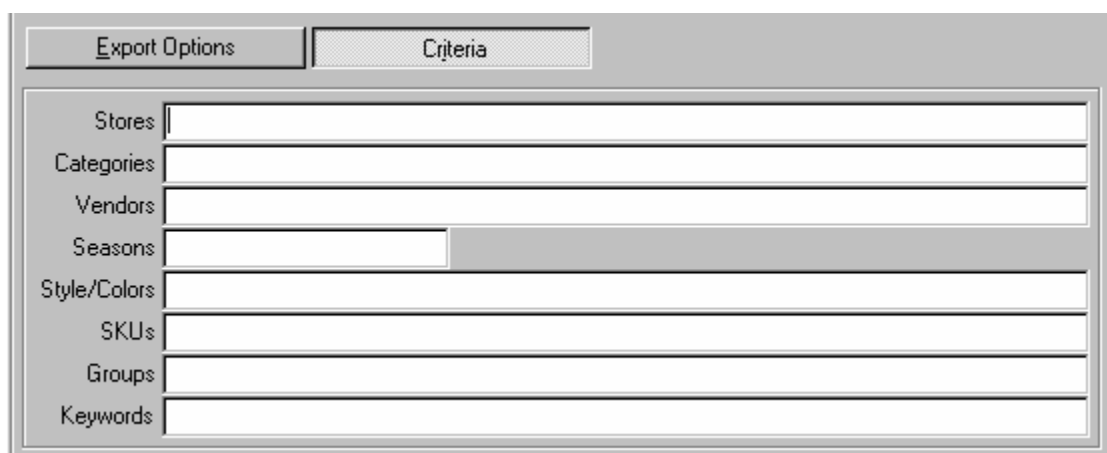

The screenshot shows a dialog box with two tabs: 'Export Options' and 'Criteria'. The 'Export Options' tab is active. It contains a text field for 'Export file name' with the value 'C:\R1CSWIN\EXPORT.TXT'. Below this is a checkbox labeled 'Combine Stores' which is currently unchecked.

Export Options:

Export file name is the path and file name of the export file that will be created from running this job. If the created file has an extension of 'ZIP', the exported file will be called QUANTITY.TXT and will be compressed into the selected file name. Otherwise, the created file must have an extension of 'TXT'.

Combine Stores should be checked if the on hand and on order are to be combined. Leaving this option unchecked will cause each store's data to be exported separately.

The screenshot shows the same dialog box with the 'Criteria' tab selected. It contains eight text input fields for filtering the export: 'Stores', 'Categories', 'Vendors', 'Seasons', 'Style/Colors', 'SKUs', 'Groups', and 'Keywords'. The 'Seasons' field is partially filled with a grey bar.

Criteria:

Selections: Choose whether you want to limit your export to a particular portion of your inventory by **Categories, Vendors, Seasons, Style/Colors, SKUs, Groups, or Keywords**. For more information about selecting see Criteria or Wild Cards.

Export SKUs to HTML

This job exports SKU information (including pictures) into an HTML format

This job is used to output SKU information, including SKU pictures, into an HTML formatted document that can be viewed with an internet browser. This is most often helpful when you need to view a number of SKU pictures at the same time. The following options are available:

The screenshot shows the 'Export Options' tab selected. It features a text field for 'HTML File Prefix (8 characters)' with the value 'JABL0003'. Below this are two sections: 'Primary Sort' and 'Secondary Sort'. Each section contains four radio button options: Category, Vendor, SKU, and Season. In the 'Primary Sort' section, 'Vendor' is selected. In the 'Secondary Sort' section, 'SKU' is selected.

Export Options:

HTML File Prefix: This is an 8-character name that **ALL** the HTML pages that are created will start with. The files will be created in an 'HTML' subdirectory under your RICS data directory. Each prefix should be unique to avoid overwriting existing HTML pages.

Primary Sort: Sort the SKUs by **Category, Vendor, SKU, or Season**. If the primary sort is by Category, Vendor or Season, every new category, vendor, or season will trigger a new HTML page being created.

Secondary Sort: If you are not sorting by SKU, you can further sort the SKUs by **Category, Vendor, SKU, Season, or Style/Color**. This only affects the order in which the SKUs are displayed and will not cause any new HTML pages to be created on a change of sort value.

The screenshot shows the 'SKU Criteria' tab selected. It contains several text input fields for 'Categories', 'Vendors', 'Seasons', 'Style/Colors', 'SKUs', 'Groups', and 'Keywords'. At the bottom, there is a checkbox labeled 'Only process SKUs with pictures' which is currently unchecked.

SKU Criteria:

Selections: Choose whether to select/print a particular portion of inventory by **Categories, Vendors, Seasons, Style/Colors, SKUs, Groups, or Keywords**. For more information about selecting see Criteria or Wild Cards.

Only process SKUs with pictures: Check this box to only show SKUs that you have assigned pictures on the HTML pages that will be produced. To find out how to assign pictures to SKUs, see File Setup - SKUs.

PO Criteria:

Use Purchase Order Criteria: Check this box to use purchase order criteria to determine which SKUs are processed.

Ship-to Stores: Select only SKUs on purchase orders shipping to the selected stores.

PO's: Choose only SKUs on selected Purchase Orders. For more information about selecting see [Criteria](#) or [Wild Cards](#).

Ship Dates: Select only SKUs on purchase orders shipping in a selected range of dates.

Order Dates: Select only SKUs on purchase orders in a selected range of order dates.

Cancel Dates: Select only SKUs on purchase orders in a selected range of cancel dates.

The screenshot shows a software window with five tabs: "Export Options", "SKU Criteria", "Stock Criteria", "PO Criteria", and "Layout". The "Layout" tab is selected. Inside the window, there is a "Format File Name" label followed by a text box containing "RICS" (which is highlighted in blue) and "HTM.CFG" to its right. Below this, there is a "Show Qtys. For Store(s)" label followed by an empty text box. At the bottom of the window, a note states: "(Quantities will be combined for all stores selected)".

Layout:

Format File Name: The HTML pages will be created according to a format file that can be interpreted by RICS. All HTML format files will end with 'HTM.CFG'. A generic format file is supplied with RICS called 'RICSHTM.CFG'. If you would like a specific format file, please contact [CSI Services](#) to discuss this.

Show Qtys for Store(s): Select the stores that will be used when displaying on-hand, on-order, and sales quantities in the generated HTML pages.

SALESPeOPLE

Enter Salespeople

Salesperson # 100
Name Ron Sulley
Other Information
Commission % 8.00
☒ Commissions are based on Sales
☐ Commissions are based on Profit
Time Clock Options
Password TIME
☐ This salesperson may access time clock functions for all salespeople
☒ This salesperson may access time clock functions for only themselves
Clear
Save
Delete
Copy
Exit

Note: If the Time Clock is not turned on in RICS you will not see the **Time Clock Options** for salespeople.

Salesperson # - can be up to 4 characters (numbers and/or characters). This will be the # they will enter to make a sale.

Name - the employee's name

Other Information - used to store a person's title, social security number, phone number, etc.

Commission % - based on sales or gross profit (If commissions are not paid you can leave this blank).

Time Clock Overview

The Time Clock System has several separate areas that you work with after the Time Clock has been turned on. To Turn Time Clock On

Passwords - created in Enter Salespeople.

Log In or Log Out - entered in the Time Clock.

Time Clock Administration - Allows adjustments to Time Clock Data.

Print Time Clock Data - Prints a report on Time Clock Data.

Clear Saved Time Clock Data - Clears the Saved Time Clock Data.

If using the time clock option you will not be able to enter hours in the Enter Hours/Percs option, but you can enter salesperson time adjustments in the Time Clock Administration. All employees and Passwords must be created, and changes made at the main computer, and the information must be transferred to the POS computer before they can take effect (unless you are using a Network). **If using the time clock option in RICS a Password is required for the employees in Enter Salespeople.**

Salesperson hours will print at the end of Salesperson Summary at the POS, and also at the end of the Sales Journal at the main computer. Salespeople cannot be clocked in for more than 24 continuous hours at a time.

When closing a batch of sales, coping sales to disk, or waiting for a call, the user will be notified if there are salespeople still on the Time Clock. If the salesperson is not clocked out first they **WILL NOT BE CREDITED** for their hours at the main computer, and a message like the below will appear. Simply clock out the employees and then continue.

Passwords

In addition to the normal Enter Salesperson information you must enter Time Clock Options and Passwords which will appear when the Time Clock option is turned on.

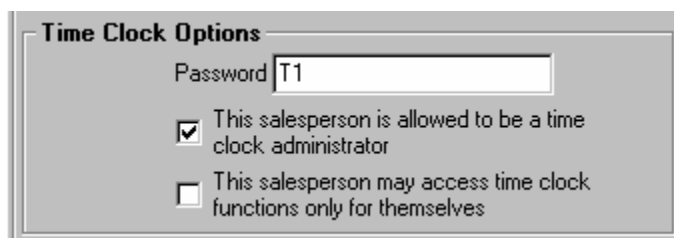

Password - any combination of numbers and/or letters up to 12 characters. **If you do not want a salesperson to be able to clock in/out on their own DO NOT GIVE THEM A PASSWORD, (leave password blank).** A password can be changed for an existing ID.

After entering a password for an employee the following two options may be checked:

This salesperson is allowed to be a time clock administrator – when checked, a time clock administrator can make adjustments to existing hours.

This salesperson may access time clock functions only for themselves - when left unchecked, this person can clock anyone in/out.

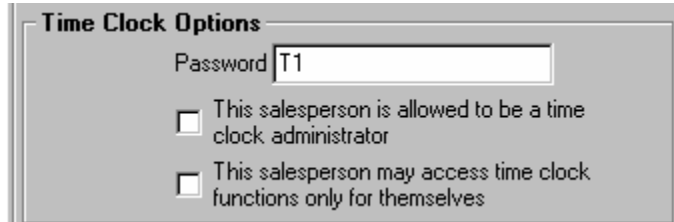

The four combinations of how these boxes are checked and their functions are explained below.

The screenshot shows a dialog box titled "Time Clock Options". It contains a "Password" field with the text "T1". Below the password field are two checkboxes. The first checkbox, labeled "This salesperson is allowed to be a time clock administrator", is checked. The second checkbox, labeled "This salesperson may access time clock functions only for themselves", is also checked.

When checked as above, this person is allowed to clock ANY/EVERYONE in/out, and to make adjustments for ANY/EVERYONE.

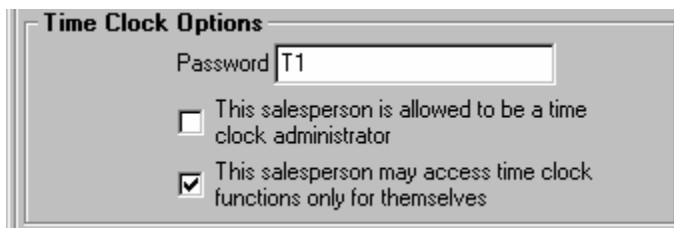

This would be the setup for owners, supervisors or office managers.

The screenshot shows a dialog box titled "Time Clock Options". It contains a "Password" field with the text "T1". Below the password field are two checkboxes. The first checkbox, labeled "This salesperson is allowed to be a time clock administrator", is unchecked. The second checkbox, labeled "This salesperson may access time clock functions only for themselves", is also unchecked.

When checked as above this person is allowed to clock ANY/EVERYONE in/out, but is NOT ALLOWED to make any adjustments.

This would be the setup for store managers, assistant managers, or key employees.

The screenshot shows a dialog box titled "Time Clock Options". It contains a "Password" field with the text "T1". Below the password field are two checkboxes. The first checkbox, labeled "This salesperson is allowed to be a time clock administrator", is unchecked. The second checkbox, labeled "This salesperson may access time clock functions only for themselves", is checked.

When checked as above this person is allowed to clock only THEMSELVES in/out, and is NOT ALLOWED to make any adjustments. **This would be the normal setup for most employees.**

Time Clock Options

Password

☒ This salesperson is allowed to be a time clock administrator

☒ This salesperson may access time clock functions only for themselves

When checked as above this person is allowed to clock only THEMSELVES in/out, and to make adjustments for only THEM.

This would be a seldom used setup.

Salesperson Login

Password

Salesperson

Time In

☐ Non-Sales Hours

Log In – to clock in the time clock, simply enter the

Salesperson Login - Enter a Salesperson #.

Password - Enter the password for this Salesperson. You must have a Password setup in Salesperson to Login.

Salesperson - Enter the Salesperson to login.

Time In - The login time will default to the current time.

Non-Sales Hours - Check on for Non-Sales Hours.

Store - (Multiple Stores Only) - Enter the store #.

[Save] - Save the information.

Log Out in the time clock, simply enter the

Salesperson Login - Enter a Salesperson #

Password - Enter the password for this Salesperson.(You must have a Password setup in Salesperson to Login)

Salesperson - Enter the Salesperson to logout, it will then show you the clocked in time.

Time Out - The logout time will default to the current time, and show the elapsed time.

Non-Sales Hours - Check on for Non-Sales Hours.

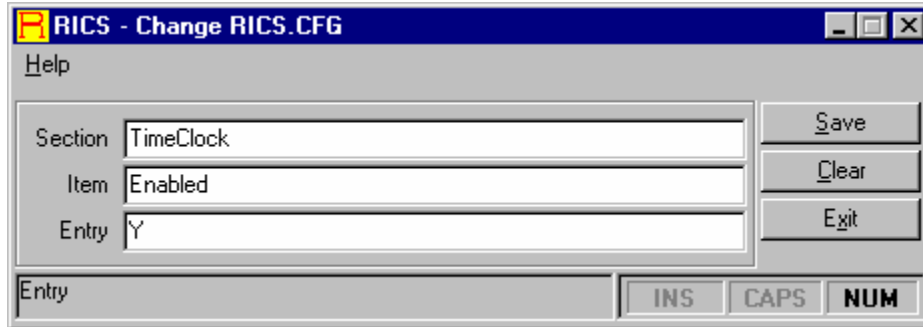

Store - (Multiple Stores Only) - Enter the store #.

[Save] - Save the information.

Turn Time Clock On

To turn on the time clock function in RICS you must first change the RICS.CFG by going to Utilities2 and the Option

Change RICS.CFG at both the **Main Computer** and at **all Point of Sale Computers**.

In the Change RICS.CFG screen enter the following information:

Section: TimeClock (No space between Time and Clock)

Item: Enabled

Entry: Y (Change the N to a Y)

Then **Save** the information.

You can also require a Cashier to be on the Time Clock before entering sales by also entering the following information.

Section: TimeClock (No space between Time and Clock)

Item: ReqCashier

Entry: Y (Change the N to a Y)

Then **Save** the information.

Note: After making the changes in RICS.cfg you must first Exit RICS and then re-enter RICS for these changes to take effect.

Time clock administrator

The time clock administrator is allowed to make adjustments to existing (unposted) time clock records until the sales records are posted. Once the records are posted you can not change the record, but you can make adjustments or reverse hours an employee's hours.

Print Time Clock Data

When printing this report, select the data you want to review.

Print salesperson detail - unchecked shows totals and totals the hours.

1 - A B C Shoes-Downtown

Salesperson	Total Hours	Non-Sales Hours
100 Ron Sulley	40.03	7.30
110 Jane Paulson	2.63	5.03
120 Rhonda Miles	15.85	15.85
* Store 1 Totals	58.51	28.18

Print salesperson detail - checked shows every clock in/out and totals the hours.

Salesperson	Time In	Time Out	Total Hours
100 Ron Sulley	12/15/1999 09:59	12/16/1999 08:41	22.70
100 Ron Sulley	12/21/1999 04:35	12/21/1999 09:00	4.42
100 Ron Sulley	12/21/1999 13:33	12/21/1999 16:34	3.02
100 Ron Sulley	12/21/1999 16:11	12/21/1999 18:12	2.02
100 Ron Sulley	01/05/2000 10:07	01/05/2000 13:00	2.88
100 Ron Sulley	01/05/2000 10:45	01/05/2000 11:37	.87
100 Ron Sulley	01/05/2000 11:08	01/05/2000 12:08	-1.00
100 Ron Sulley	01/05/2000 11:38	01/05/2000 16:45	5.12
100 Ron Sulley	01/07/2000 11:56	01/07/2000 13:29	1.55
Salesperson 100 Totals			41.58

To calculate the percentage of hours into minutes in the **Total Hours** column on this report take the percent number X 60. Example: 70% x 60 = 42 minutes

Enter Commission Overrides

Change a salesperson's commission depending on the department's merchandise sold

This job allows a different commission rate for any combination of salesperson/RICS department. If no override is specified, the rate from Enter Salespeople screen will be used.

Salesperson # - a valid RICS salesperson ID

Department - a valid RICS department number

Rate - The rate to be used for sales of this department's merchandise by this salesperson. **Note: The rate will be calculated from the selling price or the profit, depending what has been selected for this salesperson in the Enter Salespeople screen.** You can see all commission overrides by printing the salesperson file.

Enter Hours/Perks

Enter the hours worked or extra Perks earned

Enter hours worked and perks (PMS, multies, spiffs) which appear on the Employee Analysis Report. The hours worked are used to calculate sales per hour and profit per hour on the Employee Analysis report. If you do not need this report, you do not need to enter any hours or perks.

This screen also shows the total Hours and Perks for PTD, MTD, STD, and YTD.

Salesperson Analysis Report

Measure productivity of sales people

Measure the productivity compared to other sales people and to store averages. Whether you pay commissions or not, these reports generate the information to reward excellent performance or critique poor performance, and provide guidelines on areas to improve selling behavior.

The report prints employee performance showing sales, profit, commission, perks, hours and sales per hour for the current pay period, month, season and year. It also prints total number of tickets, number of tickets with more than one item sold, average sale amount, average number of items per ticket, and percentage of tickets with more than one item.

The PTD column on this report stands for period-to-date. A period can be whatever you use for a pay period: weekly, bi-weekly, semi-monthly, etc.

Use Close Salesperson Period to zero out these PTD amounts.

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Close Salesperson Period

Clears the period-to-date sales amounts at the end of your pay period

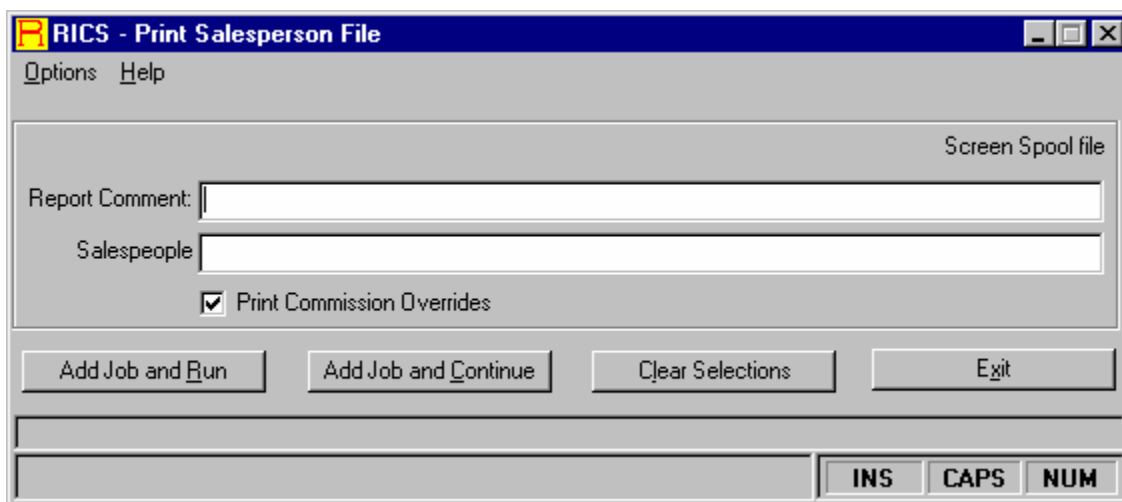

Clear the period-to-date sales amounts for all or individual sales people at the end of your pay period.

If you pay commissions, run the Salesperson Analysis Report before using this option.

You may also find Print Salesperson Summary helpful for viewing salesperson performance by department.

Print Salesperson File

Prints the Salesperson file for the selected Salespeople

The screenshot shows a Windows-style dialog box titled "RICS - Print Salesperson File". It has a menu bar with "Options" and "Help". The main area contains a "Screen Spool file" label, a "Report Comment:" text box, and a "Salespeople" text box. Below these is a checked checkbox labeled "Print Commission Overrides". At the bottom, there are four buttons: "Add Job and Run", "Add Job and Continue", "Clear Selections", and "Exit". At the very bottom right, there are three small buttons labeled "INS", "CAPS", and "NUM".

Select a range of sales people for the information you want to print, and enter report comments.

Salespeople - Enter the salesperson codes to print. For more information about selecting see *Criteria* or *Wild Cards*

Check **Print Commission Overrides** to list any commission overrides in place for the selected salespeople.

CLOSE/CLEAR

- Overview

Use these options to clear amounts from your data files for specific time periods, (i.e., period, week, month, season and year) or to clear certain files

IMPORTANT: RUN ALL REPORTS BEFORE CLOSING. You must close the selected period AFTER running all the desired reports for a period and BEFORE entering new data from the next period.

Close Week

Clears out weekly sales information

IMPORTANT: RUN ALL WEEKLY REPORTS BEFORE CLOSING. This option is used to clear weekly sales information. A week can be any user defined time frame. For example, your week can go from Monday thru Sunday, Sunday thru Saturday, or you may choose to close your week every other week. In the last scenario, weekly sales would then become bi-weekly sales. Many users will close the week every Monday, after posting sales for the week end.

Weekly Reports

There are two reports available to you for viewing weekly sales and performance. Those reports are the Sales Analysis, and Best Sellers reports. For more information, see Sales Reports.

Eight Week Trending

If you are going to use the eight week trending feature, you will need to close your week out every week. See Eight Week Trending.

You need to make a backup of your data before running this option.

You may choose to close only selected stores.

If you are not interested in weekly sales figures it is not necessary to clear the sales each week. However, you should clear them at the end of the month so that quantities do not become too large.

Close Month/Season/Year

Clears month, season, or year sales information

Before using this option:

Make sure all sales are printed and posted for the month you have just finished. Run any necessary month end reports. **Once you have closed out your month you will not be able to re-run monthly reports.**

You need to make a backup of your data before running this option.

You may choose to close only selected stores.

If you are not interested in weekly sales figures it is not necessary to clear the sales each week. However, you should clear them at the end of the month so the quantities do not become too large.

You must use this option at the end of each month to close out the month you have just completed. **RICS** will not allow sales for the next month to be posted until you run this option. The screen will indicate which month you are closing.

IMPORTANT: DO NOT forget to backup. It is recommended to **use different diskettes for labeled each month** and save them. This provides additional security, and provides the ability to re-run this month's reports at a later time if needed.

Report Suggestions

There are no right or wrong reports to run at the end of the month. Whatever information is important to you will determine the reports you should run. Some suggestions are:

Sales Analysis - Analysis by category and category summary

Sales Analysis - Analysis by vendor and vendor summary

Best Sellers - Top SKUs in each category

General Ledger Summary

Purchase Order Reports - Looking at all past due POs

Salesperson Analysis Report - Review monthly salesperson performance

Recommended Transfer Report - Balance inventory between stores

Transfer Summary Report - Totals the amount of transfers between stores

Close Season/Year - This is done automatically when you close the month setup as the End of Year month in Company Setup.

Clear Saved Sales Transactions

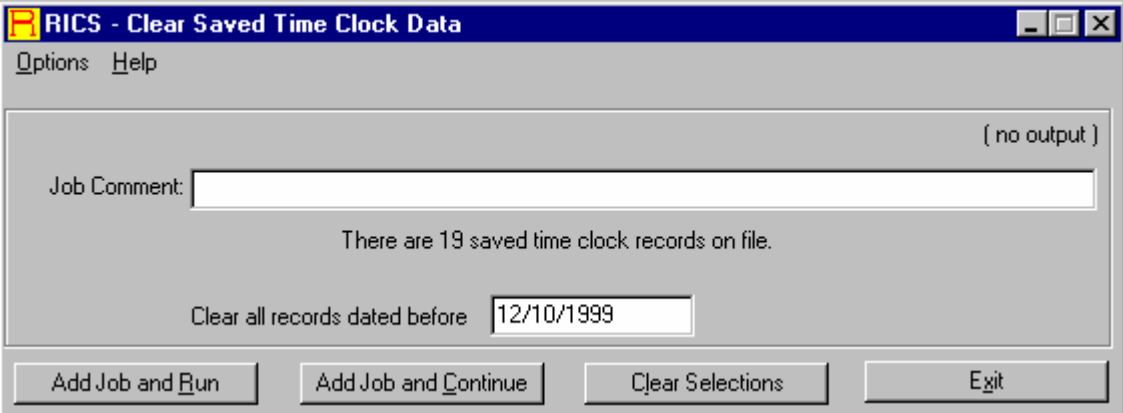

Removes information for Posted/Saved Sales

Each time you post sales the system takes that current batch of sales and adds them to a cumulative saved sales file. These sales are then used to print selected reports from the Sales menu. When running reports such as Print Sales by Time, Print Salesperson Summary, and Print Sales by SKU you may choose to print from current sales (unposted sales) or posted sales. This allows you to run analysis of sales by time, salesperson, or SKU for a selected date range from those older posted sales.

You will want to clear or delete those saved sales once these reports are no longer needed for that time period. If you never need to print these reports for sales older than three months ago, each month you should run this option to clear sales prior to a date of three months ago. Keeping this file smaller will reduce your data backup time and allow the reports to print quicker.

The option to Save Posted Sales is in Company Setup.

Clear Saved Time Clock Data

The screenshot shows a Windows-style dialog box titled "RICS - Clear Saved Time Clock Data". It has a menu bar with "Options" and "Help". The main area contains a "Job Comment:" label followed by a text input field. Below this, it says "There are 19 saved time clock records on file." At the bottom, there is a label "Clear all records dated before" followed by a date input field containing "12/10/1999". At the very bottom, there are four buttons: "Add Job and Run", "Add Job and Continue", "Clear Selections", and "Exit". The status bar at the top right says "(no output)".

Each time you post sales the system takes that current batch of Time Clock information and adds them to a cumulative Time Clock file. This screen shows how many time clock records are in the file. You will want to clear or delete those older saved time clock data files once this data is no longer needed for that time period. For example, if you will never need or review the Time Clock Data older than three months ago, each month you should run this option to clear all records dated before with a prior date of three months ago.

Clear Deleted Record Keys

Clears Deleted records for the POS

This option is only for stores that do communications over the phone.

As records are deleted on the main computer (SKUs, salespeople, customers, etc.) a separate file stores the deleted records. Those deleted records will be transmitted to the Point-of-Sale during communications and then the same records are deleted at the Point-of-Sale computer. Because occasionally communications are not successful, those deleted records are kept in this file so they could be transmitted again. At least once a month, after communications are successful, this file should be cleared.

Automatically Delete SKUs

Deletes SKUs automatically based on selected criteria.

This option prints and/or automatically deletes all SKUs with **NO on hand quantity**, **NO on order quantity**, are **NOT on any purchase order**, has **NO YTD sales** and **NO sales for the prior year**.

Don't delete any SKU that has been modified on or after _____ (date).

This allows you to keep new SKUs entered on or after a given date, but because they have no on-hand, on-order, or any sales history, they would have been deleted.

Include only selected - allows you to pick and choose limited auto delete selection of SKUs based on certain SKUs, Vendors, Categories, Seasons, Size Types, or Groups that you choose.

Selected Stores - Normally leave stores blank to select all stores, and the system will delete all history and SKU information when there is no remaining information or history for all stores combined. If you enter a selected store or stores, the system will only delete the history from those selected stores and will not delete the SKU information.

Note: It's a good idea to run this program after closing out a year.

Clear Saved Inventory Changes

Clear Saved Inventory Changes

Options Keystrokes Help

(no output)

Job Comment:

There are 1934 saved inventory changes on file.

Clear all saved inventory changes dated on or before

Add Job and Run Add Job and Continue Clear Selections Exit

INS CAPS NUM

Each time you change your inventory quantities by receiving, returning, transferring or updating via physical inventory, the system saves those changes and adds them to a cumulative Inventory Change file for review in Inventory Inquiry. This screen shows how many inventory change records are on file. You will want to clear or delete these saved inventory change records once the data is no longer needed for review by entering the date of those inventory changes you wish to purge from the system.

Clear Gift Certificate Data

Options Help

(no output)

Job Comment:

There are 15 gift certificate sales records on file
and 6 gift certificate redemption records on file

Clear all fully redeemed gift certificates with no activity after

☐ Clear over-redeemed certificates

Add Job and Run Add Job and Continue Clear Selections Exit

INS CAPS NUM

As customers fully redeem the gift certificates you may want to clear or delete these gift certificate records once the data is no longer needed for review by entering the date you wish to purge the fully redeemed gift certificates with no activity from the system.

MAILING LIST

Enter Mailing List

Enter customer information

Account # - any combination of 15 characters or numbers. The phone number (5152708182), or the customer's name (JOHNSONMAR), could be used as an account number. Using the **Phone number is strongly recommended**. DO NOT use parenthesis or dashes when entering the phone number.

Name - could be entered one of two ways: First name, then last name (i.e. MARY JOHNSON), or last name, first name (i.e. JOHNSON, MARY). It is **recommended** that you do **last name first**. You could then print your mail list in alphabetical order, and it will make it easier to do a customer lookup. Printing a mail list on labels flips names separated with a comma (i.e. JOHNSON, MARY prints as MARY JOHNSON). This can be up to 35 characters.

Customer Lookup - the lookup can be done by account #, name, or in the name field type in the last name or the first few letters of the last name, and press **[Enter]**. The name with the first occurrence of the letters typed in will then be displayed. See Look Up for more information.

Optional Fields - These optional **Extra Mail List Fields** (up to 6) would appear if setup in Mail List Setup.

Credit Limit - assigned to each customer at the main computer only.

Current Balance - maintained whenever a house charge or payment is made when entering sales. This cannot be changed at the POS.

Store Credit Balance - shows the balance of outstanding Store Credits.

Frequent Buyer Information - displayed if you are using the frequent buyer plan. None of that information can be changed at the POS. For more information, see Frequent Buyer Plan.

Comments - can be added for each customer.

CUSTOMER ALERT: Users can code a customer with an 'ALERT' flag in their comments so that the entire comment is displayed on the sales screen before a sale can be entered for that customer. Sales people can then be automatically alerted to problem customers, such as one who writes bad checks, or one who returns a lot of merchandise, etc.

To set up an ALERT: At the beginning of the 1st comment line, type **[ALERT]**, all in capital letters, then your comments.

[Clear] - clears the screen

[Delete] - **deletes all information** for the displayed customer

[Copy] - copies the screen

[Next] - displays the next name

[Prev] - displays the previous name

[Detail] - displays customer purchases for the displayed name (See Mail Detail)

[Label] - saves the mailing label information for the customer (See Print Stored Address Labels)

[Family] - displays the family member screen, and allows you to enter information, and track sales for all family members under one account number. You can also view Mail Detail for each member.

For more information on Mail List Ideas see Marketing Tools.

Mail Detail - Look At

RICS - Mail Detail Lookup for Account 8905769

Store# Salesperson # Column Row Family Member Vendor

Exit Detail Tender Comments Record: Page:

[Detail] - includes Date **Added** to the system, Date of **Last Purchase**, both **Qty** (Quantity) and **Sales** for **Period-to-Date**, **Year-to-Date**, and **Total-to-Date** Purchases.

Also each item listed has the **Date** sold, **Str** (Store#), **Ticket** #, **Slsp** (Salesperson), **Trans** (Transaction Type), **SKU** #, **Col** (Column/Size), **Rw** (Row/Width), **Qty** (Quantity), **Price** paid, **Fam** (Family Member), **Vend** (Vendor), **Cat** (Category), and **Description** of the item sold.

When Displaying a Customer's Purchase History Detail you may also display either the **[Tender]** and/or the **[Comments]** detail for the sales detail

[Tender] displays for each item listed the **Date** sold, **Str** (Store#), **Ticket** #, **Tender** (Tender Type & Amount), **Tax 1, 2, 3**, **Other Charges**, **Prev Paid** (Previously Paid), and **Change**.

[Comments] will display for each item listed the **Date** sold, **Str** (Store#), **Ticket** #, and any **Comments** that were entered for that Sales Ticket.

Enter Family Member

The Family Member allows you to enter information and track sales for all family members under one account number. You can also view detail on each member separately.

Code - can be any combination of 2 characters or numbers to separate the individual family members.

Name - the individual name and can be up to 35 characters to separate the individual family members.

Gender - can be any 1 character or numbers to separate the individual family members, such as M, F, C (Child). This is not a required field, but is an option when printing Family Mail List.

Birthday - is in MM-DD-YY format, and must be a valid date. This is not a required field, but is an option when printing Family Mail List.

Optional Fields: These optional **Extra Mail List Fields** (up to 6) would appear if setup in Mail List Setup.

Comments - can be added for each family member.

[Clear] - clear the screen

[Delete] - **deletes all information** for the displayed family member

[Detail] - displays customer purchases for the displayed family member

[Label] - saves the mailing label information for the displayed family member (See Print Stored Address Labels)

Print Mail List - Reports and Labels

There are up to four screens of information to fill out when printing the mailing list. All options give you the choice to **Run report in what order:** by **Account #, Name, Zip Code, Year-To-Date Sales, Total-To-Date Sales, Period-To-Date Sales, and Last Year Sales.**

To print all names, leave all fields blank. For more information on Mail List Ideas see [Marketing Tools](#).

Report Options	Account Criteria	Sales Criteria	Detail Criteria	File List Criteria	Misc. Options
----------------	------------------	----------------	-----------------	--------------------	---------------

Report Options - Report to run:

Report to run : ☐ Wide report (1 line per customer) ☒ Narrow report (2 columns) ☐ Narrow report with mail detail ☐ Mail labels ☐ Export comma-delimited file ☐ Special orders ☐ Layaways ☐ Payments/Charges ☐ Store Credits	Run report in what order : ☒ Account # ☐ Name ☐ Zip Code ☐ Year-To-Date Sales ☐ Total-To-Date Sales ☐ Period-To-Date Sales ☐ Last Year Sales
---	--

- **Wide report (1 line per customer)** - prints most customer information on a single line
- **Narrow report (2 columns)** - prints names and address on 8½" X 11" paper in two columns
- **Narrow report with mail detail** - prints all customer information with sales detail on 8½" X 11" paper. Asks **Print detail from ___ to ___** for a range of dates.
- **Mail Labels** - prints names and addresses on the label printer.
- **Export comma-delimited file** - does not print anything. Generates a comma separated data file which can be used for printing and merging documents with most popular word processors. Asks for an **Export file name** which is the name you want to call the file. It also gives you the option to **Overwrite the file if it already exists**. **NOTE:** To export mail list to a diskette, enter file name **A:MAIL.ZIP**. You can use any file name as long as it ends with .ZIP.
- **Special Orders** - prints only customers with special orders and asks **Print detail from ___ to ___** for a date range of tickets. You can also **Print customers with zero balances**.
- **Layaways** - prints only customers with Layaways and asks **Print detail from ___ to ___** for a date range of tickets. You can also **Print customers with zero balances** and/or **Print layaway tickets with zero balances**.
- **Payments/Charges** - prints only customers with Payments/Charges and asks **Print detail from ___ to ___** for a date range of tickets. You can also **Print customers with zero balances**.
- **Credit Slips** - prints only customers with Credit Slips and asks **Print detail from ___ to ___** for a date range of tickets. You can also **Print customers with zero balances**.

Account Criteria -

Account	
Zip Code	
State	
Name	
SETUP #1	
SETUP #2	
SETUP #3	
SETUP #4	
SETUP #5	
SETUP #6	

Select specific choices, ranges or combinations for **Account**, **Zip Code**, **State**, **Name**, and any **optional fields** (**Setup #1-6**) you have setup.

Sales Criteria -

Added to the computer from		to	
Date of last purchase from		to	
Period-to-Date Sales			
Year-to-Date Sales			
Total-to-Date Sales			
Last Year Sales			
Frequent Buyer Plan			
Frequent Buyer Quantity			
Frequent Buyer Dollars			

You have options for **Added to computer from __ to __**, **Date of last purchase from __ to __**, **Period-to-Date Sales**, **Year-to-Date Sales**, and **Total-to-Date Sales**. They can be specific, ranges or combinations. If using the Frequent Buyer Plan you have the option for **Frequent Buyer Plan**, **Frequent Buyer Quantity**, and **Frequent Buyer Dollars**. These apply only if you are if you are saving detail information.

Detail Criteria -

Made a purchase from		to	
Store			
Salesperson			
SKU			
'Column'			
'Row'			
Category			
Vendor			
Return Code			
Selected Detail Sales			

You have options for **Made a purchase from __ to __**, **Store**, **Salesperson**, **SKU**, **'Column'**, **'Row'**, **Category**, **Vendor**, **Return Code**, **Selected Detail Sales**. They can be specific, ranges or combinations.

File List Criteria -

This screen gives you the option to restrict your output to accounts that either are in selected files or are not in selected files by entering the filename to include/exclude names from. The files must be comma-delimited with the RICS account number as the first field, like the export comma-delimited file option that this report makes. You **must** include the full path in the file name fields. If files are entered in the 'Include' section, **only** accounts that are in the specified files are considered for the report (**Note:** the accounts must still match any other criteria you specify). If files are entered in the 'Exclude' section, accounts that are in the specified files will never be considered for the report.

The File List Criteria is a powerful tool when creating comma-delimited export files in the RICS system. For example, consider a user with 2 stores that need 3 sets of mailings as follows:

- 1) A mailing to customers who only have made purchases in store #1
- 2) A mailing to customers who only have made purchases in store #2
- 3) A mailing to customer who have made purchases in **both** stores.

To accomplish this task, first create 2 comma-delimited export files:

- File STORE1 - selecting any customer having made a purchase in store #1
- File STORE2 - selecting any customer having made a purchase in store #2

Next, create a comma-delimited file containing all customers in file STORE1 but not in file STORE2.

File ONLYSTORE1 - including file STORE1, excluding file STORE2 in the file list criteria with no other criteria selections. These are the customers who have only made purchases in store 1.

Now, create the labels:

To create the labels for customers who only have made purchases in store #1, simply include file ONLYSTORE1 with no other file list criteria.

To create the labels for customers who only have made purchases in store #2, include file STORE2 and exclude file STORE1.

To create the labels for customers who have only made purchases in both stores, include file STORE1 and exclude file ONLYSTORE1.

Misc. Options -

You have options for **All selected accounts** (Default Selection), **All selected accounts that have an e-mail address on file**, **All selected accounts that do NOT have an e-mail address on file**.

Another Miscellaneous Option is to limit the report to customers that have an ALERT in their comment field.

[Clear Selections] key clears all selections on all six-option screens.

Export Options

Mail List file name			
☒ Export E-Mail addresses	☐ Export user-defined fields		
	☐ Export customer sales totals		
☒ Export Customer Purchase Detail			
Detail file name			
☐ Export only selected detail			

When Export comma delimited file is selected on the Report Options tab, the Export tab shows export options when clicked on. Here the user enters the filename of the Mail List and chooses additional options to export including email addresses, user-defined fields, and customer sales totals.

If the Export Customer Purchase Detail option is checked, a separate Mail Detail export file is created with the option of exporting only selected detail from the Detail Criteria tab.

Customer Analysis Report

Prints an analysis of customer activity

The customer analysis allows you to select all or a portion of your customer base, and measure their activity further subdivided by where they are from, when they first became your customer, and when the last time they bought anything from you.

There are six screens you use to define the customer analysis.

To analyze all customers, click on the **[Clear Selections]** button, select the Report Options you wish to use, and run the report.

Report Options –

Analyze by :

☐ Zip Code ☐ Month/Year Added

☐ State ☐ Year Last Purchased

☐ Year Added ☒ Month/Year Last Purchased

Analyze mail detail from to

This screen determines how RICS will analyze the selected customers. You may group your customers in 6 ways. If you are analyzing by Zip Code, you are prompted to tell RICS how many characters of the zip code must match to be grouped together. You may also restrict the analysis to mail detail (purchases) in a specified date range. For example, by restricting the detail to the current year, you tell how much of your current business is due to new customers by analyzing by Year/Added.

Account Criteria –

Account	
Zip Code	
State	
Name	
SETUP #1	
SETUP #2	
SETUP #3	
SETUP #4	
SETUP #5	
SETUP #6	

Select specific choices, ranges or combinations for **Account**, **Zip Code**, **State**, **Name**, and any **optional fields** (**Setup #1-6**) you have setup.

Sales Criteria –

Added to the computer from		to	
Date of last purchase from		to	
Period-to-Date Sales			
Year-to-Date Sales			
Total-to-Date Sales			
Frequent Buyer Plan			
Frequent Buyer Quantity			
Frequent Buyer Dollars			

Select options for **Added to computer from __ to __**, **Date of last purchase from __ to __**, **Period-to-Date Sales**, **Year-to-Date Sales**, and **Total-to-Date Sales**. They can be specific, ranges or combinations. If using the Frequent Buyer Plan you have the option for **Frequent Buyer Plan**, **Frequent Buyer Quantity**, and **Frequent Buyer Dollars**.

Detail Criteria –

Made a purchase from		to	
Store			
Salesperson			
SKU			
'Column'			
'Row'			
Category			
Vendor			

Select options for **Made a purchase from __ to __**, **Store**, **Salesperson**, **SKU**, **'Column'**, **'Row'**, **Category**, or **Vendor**. They can be specific, ranges or combinations.

File List Criteria –

<u>Include the accounts in the following files:</u>	
<u>Exclude the accounts in the following files:</u>	

If you have previously output mailing list information in Print Mailing List to a comma-delimited file, you may enter the file name(s) in the 'Include' section to only use the accounts in the file(s). By placing the file name(s) in the 'Exclude' section, you prevent those accounts from being used in the analysis.

Misc. Options -

☒ All selected accounts
☐ All selected accounts that have an e-mail address on file
☐ All selected accounts that do NOT have an e-mail address on file

On this screen, you may restrict your analysis to those customers who either have an e-mail address on file in RICS or those who do not have an e-mail address on file.

Print Mail List - Family

There are up to four screens of information to fill out when printing the mailing list. All options give you the choice to **Run report in what order:** by **Account #**, **Name**, or **Zip Code**.

To print all names, leave all fields blank.

Report Options	Account Criteria	Detail Criteria	Family Criteria
----------------	------------------	-----------------	-----------------

Report Options - Report to run:

Report to run : ☒ Wide report (1 line per customer) ☐ Narrow report (2 columns) ☐ Narrow report with mail detail ☐ Mail labels ☐ Export comma-delimited file	Run report in what order : ☒ Account # ☐ Name ☐ Zip Code
--	--

Wide report (1 line per customer) - prints most customer information on a single line (Wide report)

Narrow report (2 columns) - prints names and address on 8½" X 11" paper in two columns

Narrow report with mail detail - prints all customer information, with sales detail on 8½" X 11" paper. This asks **Print detail from ___ to ___** for a range of dates.

Mail Labels - prints names and addresses on the label printer

Export comma-delimited file - generates a comma separated data file which can be used for printing merge documents with most popular word processors. This asks for an **Export file name** which is the name you want to call the file. It also gives you the option to **Overwrite the file if it already exists**

NOTE: To export mail list to a diskette, enter file name **A:MAIL.ZIP**. You can use any file name as long as it ends with .ZIP.

Account Criteria -

Account	
Zip Code	
State	
Name	
SETUP #1	
SETUP #2	
SETUP #3	
SETUP #4	
SETUP #5	
SETUP #6	

Select specific choices, ranges or combinations for **Account**, **Zip Code**, **State**, **Name**, and any **optional fields (Setup #1-6)** you have setup.

Detail Criteria –

Added to the computer from		to	
Date of last purchase from		to	
Made a purchase from		to	
Store			
Salesperson			
SKU			
'Column'			
'Row'			
Category			
Vendor			

Options for **Added to computer from __ to __**, **Date of last purchase from __ to __**, **Made a purchase from __ to __**, **Store**, **Salesperson**, **SKU**, **'Column'**, **'Row'**, **Category**, or **Vendor**. They can be specific, ranges or combinations.

Family Criteria -

Birth Date from		to	
Birth Month			
Gender			
Name			
SETUP #1			
SETUP #2			
SETUP #3			
SETUP #4			
SETUP #5			
SETUP #6			

Select specific choices, ranges or combinations for **Account**, **Zip Code**, **State**, **Name**, and any **optional fields** (**Setup #1-6**) you have setup.

[Clear Selections] button clears all selections on all four option screens.

Change Account Numbers

Changes Information from one account to another

Most people use a customer's phone number as the account number for the mail file, and phone numbers sometimes change. This option allows you to change a customer's number in the mail file. You can also use this option to transfer the customer detail from one account to another existing account. It simply asks for the **Original Account #** and the **New Account #** click the **[Change]** button for it to take affect. It informs you when the change has successfully been made.

Delete Mail List Names

Selectively deletes mail list accounts

This option is used to clear out accounts in the mailing list that you no longer want.

No customers will be deleted who have a current Accounts Receivable balance OR had balance on their most recent statement.

Delete customers who haven't made a purchase after __ deletes customers (and all their associated detail, if any) who haven't made a purchase after the entered date **and were added to the computer before** __

Accounts can be any selected accounts.

You have the option to **Keep customers who haven't made a purchase** and **Print a listing of names that have been deleted**.

Delete Mail List Detail

Selectively deletes mail list account detail

This choice will **Delete detail from** __ **to** __. It won't delete any customer names or address records.

Accounts can be any selected accounts. You can delete the purchase detail for selected account numbers. You have the option to **Print a listing of deleted detail**.

Clear Mail List PTD Totals

Resets the Mail List Period to Date totals

This option resets the PTD (Period -to- Date) amounts in the mail list file, or for selected account numbers. You decide when the current period ends. For example, it might be quarterly, semi-annually, annually or during a sale period.

Leaving the account field blank will delete All Period-to-Date Totals!!!!

Accounts can be any selected accounts.

You have the option to **Print report of all totals cleared**.

INS CAPS NUM

This job is used to import mail list names from an outside source into your RICS mail list. These names could come from a purchased mail list, an internet site, or even your own mail list exported and sent to be CASS certified for bulk mailing. The file must either be in a comma delimited format or a DBase format(DBF file). It is important that **you have a current backup of your data before importing mail list names** as all the changes to the mail list data will be permanent.

The General Tab requires the following information:

File Name - The file must be in the RICS data directory. Please note that the extension is in a separate field.

Account Number Location - The account number may be a field in the import file, or RICS will create an account number from the Phone Number or Name (not recommended)

Account Name Location - RICS stores the customer names in the format Last,First. In order to keep this format, RICS needs to know the format of the name in the import file. If the first and last names are separated in the import file, select the indicated option and RICS will format the name automatically. If the Name is in 1 field in the file, RICS needs to know whether to leave the name as is 'Use the Name directly from the file', or to determine the last name (and suffixes) by its location in the import file names.

File Format - If the file is a flat file (not comma delimited, the fields are in fixed locations in each record) with a fixed length(each record is not separator by a CR/LF carriage return / line field), RICS will need to know how long each record is. A DBF file is considered a fixed length flat file.

Overwrite existing mail list accounts - When checked , this will allow RICS to overwrite the information for mail list accounts already on file. If unchecked, RICS will not overwrite any accounts that are already on file.

Have you made a backup of your data? - Please make sure you have backed up your RICS data before running this job.

The **Fields Tab** is where you will enter the location of each field. If the import file is comma demited, RICS needs to now which position in each import record to obtain the desired field. If the import file is a flat file, RICS needs to know the starting position and length of each field. When the job is run, RICS will validate each record and provide an audit trail of all exceptions.

Print Stored Address Labels

Prints Saved Address Labels

This prints the stored address labels, which can be for Customers, Stores, or Vendors. This option also tells you how many labels are stored before printing them. You may print up to 99 copies of each label by entering **Number of labels to print per address**. You must have the **Mailing Label** setup in *Printer Setup* before running this option.

Gift Certificate Maintenance

Gift certificates are created in RICS 2 different ways. The first is enter and post a new gift certificate sale. The second allows you to enter previously sold gift certificates in the maintenance screen.

Gift Certificate Maintenance

Help

Gift Certificate ID: 000002

Sequence: 2

Account: LARSONBETT

Amount: 50.00

Redeemed: 34.79 Balance: 15.21

Purchase Info Redeemed Info

Ticket: 1808

Date: 01/13/2003

Clear Save Save and End Delete Gift Cert. Exit

Existing Record INS CAPS NUM

Gift Certificate ID - identifies the gift certificate. If this is a number, the gift certificates are auto-numbered when created. If not it has to be assigned at the time of purchase.

Sequence - allows multiple Gift Certificate IDs to be used and still be unique.

Account - the account of the customer that purchased the gift certificate.

Amount - the original amount of the gift certificate

Redeemed - the purchased amount the user has applied towards this gift certificate

Balance - the remaining balance of the gift certificate

The **Purchase Info** tab has the following additional information for the gift certificate:

For Account - the Account # of the customer that the gift certificate was purchased for

Store - the store # the gift certificate was purchased at

Ticket - the ticket # the gift certificate was purchased on

Date - the date the gift certificate was purchased

The screenshot shows a software interface for managing gift certificates. At the top, there are two tabs: 'Purchase Info' and 'Redeemed Info'. The 'Redeemed Info' tab is currently selected. Below the tabs is a table with five columns: 'Store', 'Ticket', 'Date', 'Account', and 'Redeemed'. The first row of the table contains the values: '1', '1808', '01/13/2003', '5151662132', and '34.79'. To the right of the table are three buttons: 'New', 'Edit', and 'Delete'. Below the table, there are several input fields. On the left, there is a 'Store' dropdown menu showing 'A B C Shoes-Downtown'. Next to it is a 'Ticket' input field with the value '1808'. To the right of that is a 'Date' input field with the value '01/13/2003'. Below these, there is an 'Account' input field with the value '5151662132' and a text field with the name 'Ralph'. To the right of these is an 'Amount' input field with the value '34.79'.

Store	Ticket	Date	Account	Redeemed
1	1808	01/13/2003	5151662132	34.79

Store: A B C Shoes-Downtown Ticket: 1808 Date: 01/13/2003

Account: 5151662132 Ralph Amount: 34.79

The **Redeemed Info** tab has a grid showing the store, ticket, date, account, and redeemed amount when the gift certificate was tendered.

Adding Redeemed Info

To add a new redeemed line, click [New] or press [ALT] + [N] button. Enter the tender information when the gift certificate was used including the store #, Ticket #, Date, Account # using the gift certificate, and the amount tendered.

Editing Redeemed Info

To edit an existing line, click [Edit] button next to that line. Make the necessary changes and click [Save] or press [ALT] + [S].

[Clear] - Clears the gift certificate screen

[Save] - Saves the gift certificate and redeemed information

[Save and End] - Saves the gift certificate and redeemed information and clears the screen

[Delete Gift Cert] - Deletes the selected gift certificate and all redeemed information

[Exit] - Closes the Gift Certificate Maintenance screen

Print Gift Certificate Activity

Print Gift Certificate Activity prints a list of all gift certificate activity. There are several options to choose from. Use the Report Options tab to make your Report Option selections. Use the Criteria tab to limit the report according to the specified criteria.

Report Options

Print activity from to

☐ Select from posted sales

☐ Select from unposted sales

☒ Select from gift certificate file

☒ Print all detail for any gift certificate selected

☒ Only print gift certificates with an outstanding balance

Sort by :

☒ Gift Certificate # ☐ Date

☐ Combine Stores

Print activity from _____ **to** _____ limits the dates in the reports.

Check the **Select from posted sales** checkbox to get gift certificate sales and tenders from posted sales.

Check the **Select from unposted sales** checkbox to get gift certificate sales and tender from unposted sales.

Check the **Select from gift certificate file** checkbox to get gift certificate sales and redeemed information from the gift certificate file.

NOTE: You cannot select from the gift certificate file and either posted or unposted sales.

Check **Print all detail for any gift certificate selected** checkbox to print all detail lines for each gift certificate that meets the criteria of the report.

Check **Only print gift certificates with an outstanding balance** to print only gift certificates with an outstanding balance remaining.

Sort by options give you the choice of the order you see the gift certificates in, by **Gift Certificate #** or **Date**.

Check the **Combine Stores** checkbox to show a summary for each gift certificate combining stores.

Criteria

Stores

Purchasing customers

Redeeming customers

Gift Cert. #'s

Stores is used to enter the store(s) that you wish to print gift certificate activity for. If you only have one store, or you want all stores printed, leave stores blank.

Purchasing customers is used to enter customer #'s that purchased a gift certificate that you wish to print gift certificate activity for.

Redeeming customers is used to enter customer #'s that a gift certificate was purchased for that you wish to print gift certificate activity for.

Gift Cert. #'s is used to enter Gift Certificate #'s that you wish to print gift certificate activity for.

Quote Setup

Setup your quote header

Enter text that will appear at the top of each Quote and **[Save]**.

Enter Quotes

Enter the Quote information.

The user can enter quotations for selected customers for special pricing, which includes an effective date and ending date. The quotes can be printed on 8 1/2" x 11" paper for internal use which includes cost, and profit margins or they can be printed without costs to give to the customer. Quotes can be changed from an inactive status to active at any time. Multiple different quotes can be on file, even though only one quote can be active per customer. Quotes can be merged together into one quote. Once a quote is active, those special prices for the SKUs on the quote for that Account# will be automatically used on the sales screen when entering sales on both the main computer and the POS computer for that Account#.

Account # - a quote must have an Account number. When you enter an account number, displayed below the name and address will be any existing Quotes, and the Active Quote for this account #.

Quote # - Quote # can be from 1 - 99.

Effective Date - Enter the date the Quote prices are to take effect.

Ending Date - Enter the date the Quote prices are no longer to be in effect.

Active - Check on if this will be the Active Quote, only one quote can be active per customer.

Comments to print at bottom of the quote simply type in text you want to print.

SKU - A quote can have as many SKUs as necessary. An SKU must be set up before you can enter it in a quote, if an SKU is not yet set up simply click **[Add]** in the SKU Lookup. After an SKU number is entered, the description and style/color are displayed from the inventory screen. The **Retail Price**, **Markdown Price** and **Current Cost** and **G.P. %'s** are also displayed.

When looking at an existing Quote, click  or press **[Ctrl] + [Q]** to view all the SKUs on this Quote.

Quote at - this is the Quoted price. Gross profit percents (**G.P. %**) are also displayed.

To save a quote, after the SKU and Quote are entered, click **[Save]** or press **[Alt] + [S]** to save this information. The SKU clears and the cursor will go back to SKU. You can then enter another SKU and its quantities. You would click **[Save]** after each SKU and its quantities are entered.

Click **[Save & Print]** or press **[Alt] + [A]** after the last SKU is entered for that Quote. The Quote prints and clears the screen allowing you to enter another Quote.

Click **[Merge]** or press **[Alt] + [M]** to merge this quote with an existing quote.

Print Quotes

To print quotes in the system, your options would be:

Accounts - Selected, range or all account #'s.

Effective from ___ to ___ - Enter the date range the Quote prices are to take effect.

Ending from ___ to ___ - Enter the date range the Quote prices are no longer to be in effect.

Print cost and G.P. % on quotes - Check on to print on quotes.

Print Active Quotes - Check on to print the Active Quote(s).

Print Inactive Quotes - Check on to print the Inactive Quote(s).

Check both **Print Active Quotes,** and **Print Inactive Quotes** to print All Quotes.

PHYSICAL INVENTORY

- Overview

There are two ways to do an inventory: 1) physically enter your counts, 2) scanning the inventory with a Portable Reader. Use these options to assist you in taking an inventory, entering the counts, reconciling counts, running reports and updating the inventory.

IMPORTANT: The inventory quantity on hand is **only changed or updated** when you select Update Inventory and then run it, it does not change when entering the counts. Therefore, **do not enter other information**, such as sales, receipts, or transfers **that occur after the physical inventory, until you complete Update Inventory**.

Before doing an inventory: Check to make sure you have done the following items before doing your inventory:

- Enter all receipts, vendor returns and transfers in RICS.
- Printed and posted all sales.
- Know where your entire inventory is, clean up stock rooms, hold shelves.
- Have a plan on how you'll count/scan your inventory.
Example: Count all shelves starting from bottom to top and from left to right, or by vendor.

To do a physical Inventory: Make sure you have completed the above items and then do a physical inventory the normal routine would be as follows in order.

1. Print Worksheets to record your counts on
2. Count your inventory.
3. Enter Physical Counts will enter counts to inventory count file.
4. Print Items Not Counted Report, review report and make corrections.
5. Print Variance Report, review report and make corrections.
6. Backup Data
7. Update Inventory replaces old on hand counts with new inventory counts.

To do an Inventory using a Portable Reader:

1. Scan the inventory into your Portable Reader.
2. Get Data from Portable Reader gets counts into the computer.
3. Post Data from Portable Reader posts counts to inventory count file.
4. Print Items Not Counted Report, review report and make corrections.
5. Print Variance Report, review report and make corrections.
6. Backup Data
7. Update Inventory replaces old on hand counts with new inventory counts.

Print Worksheets

Prints an Inventory Worksheet to record your counts on

This report is optional. It prints out a form to record your counts when manually taking a physical inventory.

You can print all SKUs or only SKUs used in a particular store (SKUs that have activity, such as sales history or on-order for that store). This report is printed in order by vendor or by category, to make it easier to locate your inventory. This report may also be printed for specific vendors, categories, or SKUs, seasons or groups.

NEW STORES: To print a worksheet to assist you in entering your beginning inventory, you must print all SKUs because no activity has occurred for any SKU (Enter your beginning counts using *Enter Manual Receipts*). The next time you do a physical inventory, you would probably want to print only the SKUs for a store.

Enter Physical Counts

To enter either physical counts or make adjustments to an original count

New Users: DO NOT USE THIS OPTION to enter inventory counts for the first time. Instead, use the option *Enter Manual Receipts*.

Entering Physical Counts - Enter in the exact on-hand quantity for the counted SKU, then  save them. Only SKUs that have quantities entered will be updated. When you save a count it is ADDED to the existing count for that SKU (if there is one), it DOES NOT overwrite the existing count, so if you have the SKU in three different locations in your store, you could enter your 1st location count (5), save it, enter your 2nd location count (7), save it, and enter your 3rd location count (3) and save it, your count for this SKU would then be the total of the 3 counts added together (5+7+3=15).

The  button automatically places your on hand quantities in the count grid for the selected SKU and store that is entered. If you already have counts entered for an SKU for the store you are entering you will not be able to use this.

The  button places the quantities you have **already entered** in the count grid for the selected SKU and store that is entered. This is a simple way to check any item when you have a question about what was already entered, or want to review your counts for an SKU.

Revising Counts: For counts previously entered (Using either this option or using a portable reader), but not yet updated, you should enter a positive or a negative adjustment. For example, you entered a count of 5 for an SKU/Size. You realize later it should be 4. You should enter a -1 to reduce the count by one. DO NOT enter adjustments for SKUs that do not have any physical counts entered.

Zeroing Counts: AN SKU should be zeroed out if there is "0" on-hand quantities (i.e. any size of any width). *Print Items Not Counted Report* lists SKUs that possibly need a zero quantity entered. Enter a zero count in any column of any row to zero out the SKU.

Physical Inventory with a PC: RICS has the ability to have physical inventory counts scanned directly into a computer. A decoder and scanning device would need to be connected to the computer. To start scanning, enter the store number and press  a line will then appear that says **Bar codes** you can then start scanning the bar codes.

Remember, entering physical counts does not update your inventory. To update your inventory, you must run *Update Inventory*.

Get Data from Portable Reader

Transfers the data from your portable reader into your computer

For more information see [Portable Bar Code Reader](#). (on page 18)

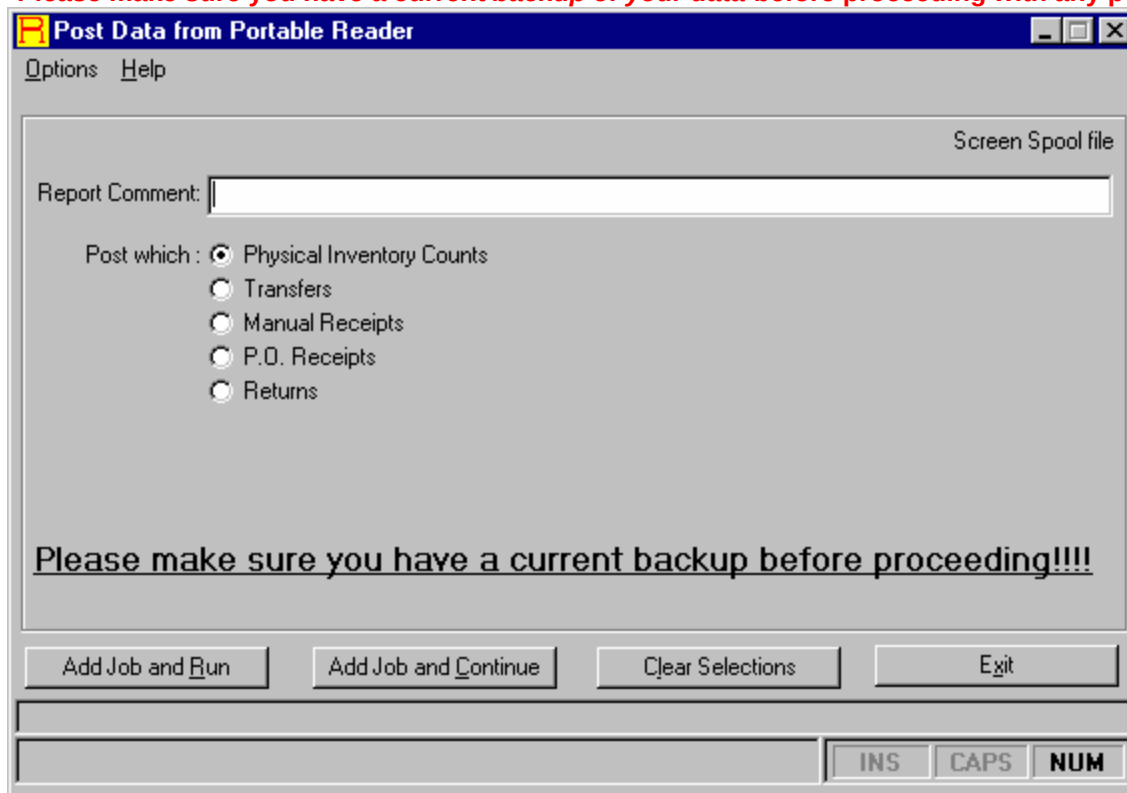

Connect the cable from your portable reader to the selected com port on the back of your computer, press the  button. After getting data from the portable reader, **RICS** will then display the [Post Data from Portable Reader](#) screen.

You must first *post data from portable reader* before running this option again.

Post Data from Portable Reader

Use this option to post inventory from the PT2000 as physical inventory counts, transfers, manual receipts, or PO receipts

Please make sure you have a current backup of your data before proceeding with any posting option

Posting physical inventory counts:

Click on **Post which: Physical Inventory Counts** and then run. Physical Counts are then be posted for the store# that was entered in the portable reader.

NOTE: Your counts are not posted directly to the inventory files; those files will be updated when you select *Update Inventory*

Any "exceptions" report from your scanned inventory print out when you run this option (i.e. invalid SKU, ROW/COL, or UPC). This report lists the previous valid SKU and the next valid SKU. This information is useful to locate where on the floor or stock room that item is located. Once you locate the item, you need to enter it into inventory using *Enter Physical Counts*.

Posting transfers:

Before scanning the inventory to transfer, it is necessary to enter the store number on the PT2000 as "00", otherwise the inventory will not be transferred.

Click on **Post which: Transfers** and new lines appear for the **From store** and **To store**. Enter the **From store #**, which is the store the inventory is being transferred from, and the **To store#**, which is the store the inventory is being transferred to. A report is created listing which items and sizes were transferred, with totals, when this option is run.

Posting manual receipts:

Before scanning manual receipts, it is necessary to enter the store number on the PT2000 as "00" otherwise the counts will be "rejected" as receipts.

Click on **Post which: Manual receipts**, a new line appears for the **Store #**. A report prints listing which items were received, with totals, when this option is run.

Posting PO receipts:

Before scanning PO receipts, it is necessary to enter the store number on the PT2000 as "00" otherwise the counts will be "rejected" as receipts.

Click on **Post which: PO receipts**. Using this option lowers your on-order quantities. The inventory is received at the "current" cost that is on your inventory screen.

When entering or scanning PO receipts into the portable reader, enter the PO number being received in the SKU field. Then enter REC for column and PO for the row. The following entries will be posted as received for that PO number. If you wish to enter receipts for another PO, again enter the new PO number as SKU, and REC and PO for column and row.

A report is printed listing which items were received, with totals, when this option is run.

Posting manual returns:

Before scanning manual returns, it is necessary to enter the store number on the PT2000 as "00" otherwise the counts will be "rejected" as returns.

Click on **Post which: Manual returns**, a new line appears for the **Store #**. A report prints listing which items were returned, with totals, when this option is run.

Print Items Not Counted Report

Lists all SKUs that do not have a physical inventory count entered

Why is this Report Important?

This is important because if a SKU does not have any counts entered, its inventory will be unaffected when you Update Inventory. That means your inventory could be over or under-stated, unless you "zero out" those SKUs.

You may select ranges of items in which the report should print. If you are doing an entire inventory, leave these fields blank. You may also select whether or not you want SKUs that have zero on-hand to print on the report. Items on this report that have a non-zero quantity need to have a zero physical count entered.

To zero out a SKU: use the option Enter Physical Counts. Type in the appropriate store number and SKU, enter a **zero** count in any Column (size) of any Row (width) and save.

Print Variance Report

Compares inventory counts to on-hand quantities

This report prints the counts that have been entered and compares them to what the computer has for the actual inventory on-hand by units and cost. It is used to determine if any errors have been made when entering the counts and also what your inventory variance is in total units and total dollars.

Click on **Print only varying items** to only print the SKUs where there is a discrepancy between the count and the actual on hand quantity, otherwise all SKUs will print and this maybe a lengthy report.

Review this report, if corrections are needed, use Enter Physical Counts enter the appropriate quantities, and rerun this report. If you do not enter counts at all for any SKU it will NOT print on this report, instead it would print on the Items Not Counted report.

Important: If you take an inventory for one vendor, or one category, do not enter that vendor or category on the Variance Report selection screen. The system prints those SKUs that you entered a count for. Otherwise, if you accidentally entered or scanned a count for an SKU outside that vendor or category, the system would update that SKU with a quantity of one and you would never know it.

Update Inventory

Replaces on hand quantities with inventory counts

This option is used after you have entered the physical counts and determined from the various reports that the counts are correct. After updating the items counted, it changes what was previously on hand and replace it with the new quantity counted, and items that were zeroed out then have an on hand quantity of "0".

Important: Be sure you have done the following items:

- Print Items Not Counted Report.
- Entered a zero count for any items on that report.
- Print Variance Report, and review it.
- Back up your data.

Before updating your inventory, you are required to click on each item in **Have You?** to make sure this has been done before you be allowed to update your inventory.

FILE SETUP

- Overview

File Setup is used to setup, edit, and delete records in the **RICS** data files. **Information must be set up here before it can be used elsewhere** in the program.

All items need to be saved before they can be used.

Required Basic Files that need to be set up:

Stores

Departments

Categories

Size Types

Vendors

SKUs

Salesperson This file is location in the Salespeople section of RICS.

Other Files that may be set up but not required:

Groups

Open To Buy Plan

Sales Tax Override

Case Packs

Communications

Users

Return Codes

Promotion Codes

Stores - File Setup, Taxes

Setup or change basic information about the Stores, Taxes and Tender Types in your company.

Store Number: The store number can be any number from 1 to 999. You are limited to the number of POS locations you have purchased for your system. See Technical Support for more information.

Store Name: This internal name is displayed on various screens and printed on reports.

Mail Name: This name is printed on POs. It is usually a corporate name.

Address, City, ST, Zip: These items must be filled in to print on your Labels, POs and other reports.

The next four folders need be clicked on to fill in the entries.

Taxes

Taxes must be setup for each store. Up to 3 taxes can be entered per store.

Sales Tax: Enter the **Description** of the tax and the **Tax Rate**. The description can be up to 10 characters in length of numbers, letters, or combination of the two (Example: *State 5.00*).

Select how your sales tax is computed: The three choices are:

Round to the nearest cent (#1 is normally used)

Always round up

Always round down

The general tax rate of most items should be entered on the store screen.
If some items have a different tax rate, see [Sales Tax Override](#).

NOTE: A DESCRIPTION MUST BE ENTERED. You cannot enter a tax rate without a description first.

Tender Types, General, Bill-To Address

Tender types are used to identify how a sale is paid for.

Description	Cash	Open Drawer	Description	Cash	Open Drawer
1 Cash	☒	☒	7 Credit Slip	☐	☒
2 Check	☒	☒	8 Not Used	☐	☐
3 MC/VISA	☒	☐	9 House Charge	☐	☒
4 Discover	☒	☐	10 Gift Cert.	☐	☒
5 Not Used	☐	☐	11 Store Credit	☐	☒
6 Amer Expr	☐	☒	12	☐	☐

Description: Enter the description of the tender type. The description can be up to 10 characters in length of numbers, letters, or combination of the two.

Cash: Tender types that are checked are "considered cash" and determine the cash balance of the cash drawer. Typically these tender types should be Cash, Check, or any credit cards that are accepted and deposited directly into your bank account. Uncheck the tender types are NOT used to compute the cash balance of the cash drawer. ***Tender types Not Used are not displayed on the sales screen***

Open Drawer: When checked opens the cash drawer when this tender type is entered.

NOTE: After changing tender types, the [store file must be transferred to the POS](#), and the [current batch of sales must be closed](#) before the changes will take effect.

General

Is for basic information

Last Ticket Used is the default last ticket used to start a sales batch. This is used when RICS cannot determine the last ticket number for a user entering sales for a store.

Phone Number and **Fax Number** are used to print on RICS Purchase Orders.

'Other Charge Description' supplies a different description on sales receipts for the 'Other Charges' field. For example, a store dedicated to mail order or catalog sales may want to change the 'Other Charge' description to 'Shipping'. Each register may also have its own unique 'Other Charge' description by entering it in the local machines private RICS.CFG file in Section [Sales Screen](#), Item [OthChgDesc](#).

Email Address is used to print on various reports.

Bill-To Address

The following fields are basic Bill -To Information: **Name**, **Address**, **City**, **State**, and **Zip Code** for each store.

[Bill-To Label] - Saves the label information, to print the label run [Mail List/ Print Stored Address Labels](#).

[Label] - Will save the label information, to print the label run [Mail List/ Print Stored Address Labels](#).

Sectors

A sector is a group of departments

A lot of thought should go into deciding which departments should be grouped with each sector. Since no one knows your store better than you do, or how simple or detailed you want your information, you are the best judge of what your Sectors should be, since there are no set sectors. It would be a good idea to number sectors by using the first department. For example, sector 10 begins with department 10 and ends with department 20, and sector 30 begins with department 30, and ends with 40, and so on.

Sector 10 Men's Items includes

Department 10 Men's Shoes includes:
Category 110 Men's Dress
Category 120 Men's Casual
Category 130 Men's Walking
Category 140 Men's Dress Boots
Department 20 Men's Clothes includes:
Category 210 Men's Dress
Category 220 Men's Casual
Category 230 Men's Walking
Category 240 Men's Dress Boots

By leaving gaps, it is easier to add new sectors later. Several reports will group information by sector, with sector sub-totals.

Sector: can be any number 1 through 99. **[Ctrl] + [P]** displays a list of sectors you have already entered.

Description: can be up to 20 characters in length.

Begin department: is the first department number in the sector.
In the example above, Sector 10, Men's Items, the Starting department is 10.

End category: is the last department in the sector.
In the example above, Sector 10, Men's Items, the ending department is 20.

Departments - File Setup

A department is a group of categories

A lot of thought should go into deciding which categories should be grouped with each department. Since no one knows your store better than you do, or how simple or detailed you want your information you are the best judge of what your Departments should be, since there are no set departments. It would be a good idea to number departments by using the first two digits of the first category in that department. For example, department 10 begins with category 100 and ends with category 199, and department 20 begins with category 200, and ends with 299, and so on.

Department 10 Men's Shoes includes:
Category 110 Men's Dress
Category 120 Men's Casual
Category 130 Men's Walking
Category 140 Men's Dress Boots

By leaving gaps, it is easier to add new departments later. Several reports will group information by

department, with department sub-totals.

Department: can be any number 1 through 99. **[Ctrl] + [P]** displays a list of departments you have already entered.

Description: can be up to 20 characters in length.

Begin category: is the first category number in the department.
In the example above, Department 10, Men's Shoes, the Starting category is 110.

End category: is the last category in the department.
In the example above, Department 10, Men's Shoes, the ending category is 140.

Printing a Department List: To print a list of all or selected departments, see [Print Department File](#).

Categories - File Setup

Categories are used to group similar SKUs together

It is not difficult to enter your categories, but a lot of thought should go into deciding what categories to use, since they determine how the reports are printed. No one knows your store better than you do, or how simple or detailed you want your information, so you are the best judge of what your categories should be, since there are no set categories.

It is important to group similar categories together and **not** number them consecutively. By leaving gaps, it is easier to add new categories later if the need arises. Consecutive categories make up departments. Each SKU must be assigned to one of these categories. Many reports group information by category with category sub-totals, and/or allow selection of categories.

Category: can be any number 1 through 999.

Description: can be up to 20 characters in length.

Printing a Category List: To print a list of all or selected categories, see [Print Category File](#).

Changing Categories: If necessary, there is a utility available to renumber categories. For more information, see [Change Categories](#).

Categories might be setup something like this

	<u>Simple</u> Cat #	Description		<u>Detailed</u> Cat#	Description
Dept 10	110	Men's Dress	Dept 10	110	Men's Dress Tie
Men's	120	Men's Casual	Men's Shoes	115	Men's Dress Wingtips
Shoes	130	Men's Boots		120	Men's Dress Slip On
				125	Men's Dress Boots
				150	Men's Casual Tie
				155	Men's Casual Slip On
				160	Men's Walking
				170	Men's Work Boots
				175	Men's Hiking Boots
				177	Men's Rubber Boots
				180	Men's Slippers

Groups - File Setup

Groups are used to link SKUs together from different Categories, Vendors, or both for report options or entering price discounts

A **Group** is an option to link SKUs together for reports that may be in different categories or have different vendors (Some Examples of using groups might be all SKUs on a sale rack, all items that were bought for *promotional pricing*, or SKUs with high performance that needs to be reviewed more often for possible fill-ins). You may also use groups to take price discounts (mark down the current selling price for all SKUs within a group).

Group Code: Can be up to 3 characters in length of numbers, letters, or combination of the two.

Description: Can be up to 20 characters in length describing the group.

Add, change, or delete an SKU in a group: Enter, change or delete the group code for the SKU on the group line in SKU maintenance. See [SKU Maintenance](#)

Reports by Group: In all sales reports in which criteria is an option, groups will be listed as one of the options. See Sales Reports

Price Discount by Group: An option to mark down an entire group of SKUs instead of marking down each SKU individually (Mark down 200 SKUs in group W-White Shoes at the end of the season). See [Price Discounts](#)

Printing a Group List: To print a list of all or selected groups.
For more information, see [Print Group File](#).

Changing Groups: If necessary, there is a utility available to renumber groups and the SKUs in those groups. For more information, see [Change Group Codes](#).

Size Types

Size types are created for different types of merchandise

Size Type # 100 Column Description Size

Description Men's Shoes N-WW Row Description Width

	065	070	075	080	085	090	095	100	105	110	115	120	130	140	150

Modify the NRF code table

Existing Record INS CAPS NUM

A size type can be a maximum of **54** columns by **27** rows. (i.e. 54 sizes by 27 widths)

Note: DO NOT create a size type for those items that do not come in sizes.

You do need not to create a lot of different size types if you create a size type that fits all your sizes. For example: You carry men's shoes in sizes 6 1/2 to a 15 and from a N to WW this one size type would be for all styles that come in those sizes, even if you only carry a style from a size 9 to 11 in M widths only.

Size Type can be any number up to 3 digits. This number is then assigned to a SKU to create the sizes associated with the SKU. **[CTRL] + [P]** displays a list of available size types already entered.

Description can be up to 20 characters. This description is only used to identify the size grid. Some examples of size type numbers and descriptions are:

100 Men's Shoes N-WW
101 Men's Shoes A-3E
102 Men's Athletics
200 Women's Shoes S-WW
201 Women's Shoes AA-EE
800 Clothing S, M, L
805 Clothing 3,5,7,9

Column Description can be up to 5 characters. Some examples might be: SIZE, WAIST, NECK, or COLOR. Remember, a size type is **NOT** created for items without sizes.

Row Description can be up to 5 characters. Some examples might be: WIDTH, LENGTH, and COLOR. **Do not** have a row description unless it is necessary. For example: Athletic shoes may only come in sizes, but with in no widths.

Column on the size grid needs an identifying "label", up to 3 characters. For example: a size 6 would be 060, a size 6½ would be 065, and a size 10 would be 100.

Row, when used, need an identifying "label", up to 2 characters. For example: widths of N, M, W, and WW.

NOTE: All COLUMNS and/or ROWS do not have to be used. DO NOT have identical COLUMN and/or ROW "labels" on the same size grid.

Changing a size grid: BE CAREFUL changing a size grid. You can add sizes (COL) at the end of a size grid, move or add widths (ROWS) without difficulty. DO NOT add sizes (COL) to the beginning, or insert in the middle of the grid by "moving" sizes over. If it is necessary to add sizes to the beginning, or in the middle of the grid, see Change Size Types.

NRF Codes: NRF codes are not needed unless receiving UPC cross-reference diskettes, using EDI, or doing Direct Sale. See NRF Codes.

Existing Record

The National Retail Federation has established a unique five-digit number for most every size and width. This five-digit NRF code eliminates confusion between you and the vendor. For example: a size 7 could be 070, or 7.0, or just 7. Widths could be XW and WW. For example, a 7½ Narrow would be NRF code 50414.

Entering NRF Codes: Enter a size type number. Click on **NRF Table** to display the NRF code grid. For **shoe size types, the Table Number is 5** (NOTE: The table number is the first digit of the NRF codes). Enter the last three digits of the NRF codes in the appropriate column, if the code # begins with 50, or the last four digits if it does not begin with 50.

GMAIC Format

GMAIC format is a 160-byte record followed by a carriage return/line feed. The file *must* contain the NRF size code for items that have sizes. Actual file layout is listed below.

Fields required:

Position #	Description	Length
1	Qualifier	2
3	Vendor ID	10
21	UPC Number	12
33	Product ID (SKU#)	20
85	NRF Size Code	5

Vendors - File Setup

The Vendor you bought the SKU from. Vendor # is required for all SKUs

Vendor #: A vendor number must be assigned for each SKU. It is recommended that the vendor # be the first 4 letters of the vendor name. For example: Nike is NIKE, Rockport is ROCK.

Name: This internal name is displayed on screens and reports.

Mail Name: This name is displayed on Purchase Orders. For example: Vendor name may be Naturalizer, but the Mail name may be Brown Shoe Company.

Fax: The fax number will print on purchase orders.

Email: The email address for the vendor.

Contact: Sales men or service rep (Not required).

Comment: Any information you want (Not required).

Terms, Ship Via: These are the default settings for the Vendor and displayed on Purchase Orders. These can be changed on any Purchase Order.

EDI Qualifier, ID: is used to identify vendors. This field does not appear unless you use EDI, see [Technical Support](#).

Account #: Each store can be assigned a separate account number. For multiple stores enter the account # for the stores listed.

[Label] - Save the label information, to print the label run **Mail List/** [Print Stored Address Labels](#).

Printing a Vendor List: To print a list of vendors, see [Print Vendor Files](#).

Changing Vendors: If necessary, there is a utility available to rename the vendor numbers. For more information, see [Change Vendors](#).

SKUs - File Setup

SKUs are used to identify all merchandise in RICS

Clear Save Delete Copy Delete UPC's Dup Vendor SKU Exit

SKU#: You can use any combination of letters and/or numbers up to fifteen characters for the SKU number. This is the number used to identify all merchandise in reports, sold, ordered, transferred, returned, and received in RICS. You should try to use the *vendor's* SKU as the SKU in **RICS** when ever possible.

Changing a SKU Number: SKU numbers cannot be changed on this screen if it has been sold, ordered, or received. See [Discontinue SKUs](#).

Vendor: A vendor number must be assigned for each SKU. This is a required field.
See [Vendors](#).

Vendor SKU: Entered if you are planning to use the vendors UPC bar codes in EDI, Vendors cross reference diskettes, Shoe & Sport Talk, or Direct Sale, otherwise it is not a required field. If the Vendor's SKU was used as the SKU above, press the button, or **[Alt] + [V]** to duplicate the SKU# in this field. This is not a required field.

Color Code: This field only appears when a vendor is chosen with a Qualifier ID that requires color codes. This field is used only with EDI, S&ST, or when using vendor UPC cross-reference diskettes.

Category: A category number must be assigned for each SKU, this is a required field.
See [Category](#).

Size Type: must be entered for SKUs that are broken down by size, color, etc. Leave blank or enter a zero for SKUs that are not to be tracked by any sizes (quantity only).
See [Size Type](#).

Group: (Optional) is entered if you are planning to use Group Codes. See [Group](#).

Description: This is the name you call an item. **This prints on the customers receipt, stock labels,** and on all reports that use SKU detail. The description is also one of the options to index the SKU lookup.

Style/Color: is used to identify a style or color, but not both. You should be consistent when entering this information. Many reports options use Style/Color, along with price discounts, plus it is also one of the options to index how the SKU is looked up. If the same style or color is entered two different ways, the summaries or index will be different. For example: Black shoes are entered as either BLK, or BLACK, in this case all BLACK would be listed or totaled before the BLK.

Location: is used **ONLY** by companies that have a central warehouse location where merchandise is received. This location is a sort option on the Automatic Transfers report.

Comment: is used to put in any internal information about the SKU. This does not print on receipts or reports.

Current cost: is the amount you are now paying for this SKU. It is also one way to determine the current value of your inventory, and determines your G.P. % (Gross Profit %) in the Pricing portion of SKU setup. All SKUs should probably have a current cost of greater than 0.00. Gross Profit on reports is calculated from the average cost, not current cost. **RICS** automatically calculates average cost when merchandise is received and/or transferred. Changing the current cost does not change the Average Cost.

Season: is another way to group like SKUs together. Many reports options use Season, along with price discounts. See Season Setup.

Keywords: another way to categorize SKUs. The difference between a keyword and group codes, seasons, or style/colors is that one SKU can have multiple keywords. In the example above, this SKU can be included in a report of all 'SALE0800' items, which were items put on sale in August 2000. But Cindy, the merchandiser can also run a report showing only items she wants to keep a close eye on for reorders. She has given these SKUs the keyword 'CINDY'. You may assign up to 60 characters of keywords for each SKU. Each keyword must be separated by a space. If you want to add a keyword to a SKU, you may click on the lookup eyeball to the left of the keyword, select the desired keyword, and RICS will automatically assign the keyword to the SKU.

Coupon SKU: Checking the Coupon SKU box will cause the SKU to be defaulted to a -1 at the Enter Sales screen when scanned or otherwise entered. It is called a coupon SKU because this option works ideally with coupons. Checking this box allows the quick scanning of Coupons or other SKUs at a sales register.

Picture File Name: You may enter a valid file name of a picture to be associated with the SKU. The accepted file formats are JPG, BMP, or GIF. The file must reside in the RICSPICS subdirectory under your RICS Data Directory. If you have a file in the RICSPICS directory with same name as the SKU being added, the picture filename is added by default. When a SKU name is entered on various RICS screens, its picture is displayed in the corner of the monitor. To find out more about the SKU picture form, see SKU Pictures.

Pricing:

Pricing		
<u>Curr.</u>	List Price	45.00
☒	Retail Price	42.00
☐	Markdown 1	35.90
☐	Markdown 2	31.90
	Perks	.50
		G.P. %
		60.71%
		54.04%
		48.28%

List Price (Optional) is used by discount stores. The stock labels that are printed could display "List" price, "Our" price, or anything up to 4 characters.

Retail Price is the "regular" (normal) selling price of the item.

Markdown 1 could be a "sale" price of the item.

Markdown 2 could be an additional "sale" price of the item.

Normally RICS will calculate the G.P. % based on the current cost and prices you enter. Alternatively, you may enter the cost and then your desired Gross Profit in the G.P. Field, press the **[Calc]** field and RICS will insert the retail price that will give you the desired profit margin. You can still change the price manually to conform with your store's pricing conventions.

What is the current selling price? The current selling price of the item is reflected in the Pricing section of the screen. The three options: Retail, Markdown 1, and Markdown 2 each have a selected option next to them under the **Curr** label. The option with the black circle in it is the selected current pricing option. In the example above, the Retail Price is the current price. To change the current price, click a different option.

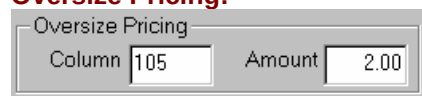

Perks: (PMs or spiffs) entered here automatically post to the appropriate salesperson when a sale is made. Perks may also be manually entered when sales are done or in Enter Hours/Perks. The Employee Analysis report prints the amount of perks for each salesperson.

Label Type:

A form titled "Label Type" with four radio button options: "No Labels", "Regular Labels", "Small Labels", and "Other Labels". The "Regular Labels" option is selected, indicated by a black circle in the radio button.

Click on the box for the type of label you want for this SKU, or select No Labels for those items that should never have a label printed. A selection on label code is available when printing labels. See Print Stock Labels.

Oversize Pricing:

A form titled "Oversize Pricing" with two input fields: "Column" with the value "105" and "Amount" with the value "2.00".

(Optional) Oversize pricing can be entered for large size of a SKU. Column (from the size type file given for the SKU) is the size that begins the extra amount charge. The amount is added to the selling price. (Example: \$2.00 is added to the price on any sizes 10 1/2 or larger.)

A button labeled "Save".

When you save a SKU number, all of the information is displayed on the screen, except the SKU number, until you override it. This is useful when you setup SKU items that are similar (i.e. 855N30 - Royal Black and 655N30 -Royal Navy), in which case you need only enter the new SKU# and the new color.

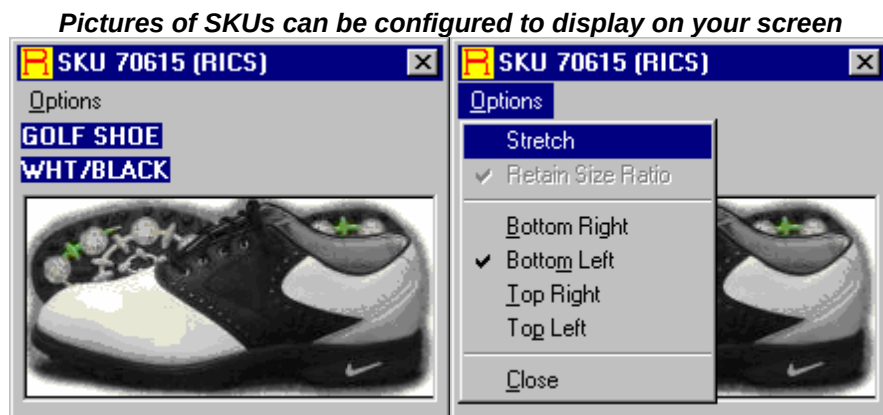

A button labeled "Delete UPC's".

Delete all UPC codes for the selected SKU.

A button labeled "Delete".

A SKU normally should not be deleted. The item should usually be discontinued. A SKU should only be deleted if there is no sales history or orders for it.

SKUs – Picture Configuration

When you have assigned a picture to a SKU and bring the SKU up in many of the RICS screens, the form above will be displayed. By selecting **Options**, you are able to change the way the SKU picture is displayed.

The **Stretch** option allows you to resize the form the picture resides on. This also stretches or shrinks the picture to fit the new form co-ordinates. This may cause the picture to appear abnormally elongated. To avoid this side effect, select the **Retain Size Ratio**. Retaining the size ratio allows the picture to expand or contract with the form without distorting the picture.

The **Bottom Right**, **Bottom Left**, **Top Right**, and **Top Left** options position the SKU picture in the selected corner of the screen.

The **Close** option closes the SKU picture form and no more pictures are displayed until the option is re-enabled in the RICS Main Menu menu bar under **Miscellaneous Options, Allow SKU Pictures**.

The following screens are capable of displaying SKUs. Any or all of these screens can be kept from displaying by setting the corresponding RICS.CFG entry to N for section 'ShowPictures'.

Open To Buy Plan - File Setup

Creating an Open -To - Buy Plan

This file is optional. It is used when printing the Open-To-Buy vs. Sales Report and the Open-To-Buy Report. The option for which method you select is entered in Company Setup. There are two methods for calculating planned sales for each store/category/month:

Use % of total store sales and fixed monthly percentages.

Use % change over last years sales for each category.

Use % change over last years sales for each category is the most commonly used. It is for having the system compute planned sales using a percentage of increase or decrease from Current Year/Last Year actual sales. The Current Year Sales are automatically entered at the Close of the Month. The following screen would be used:

	Last year Sales	Current Year Sales	Mkdwn %%	Next Year Sales	Mkdwn %%
January	1785.00	1895.00	8.0	1990.00	.0
February	1110.00	1220.00	10.0	1281.00	.0
March	1885.00	1890.00	2.0	1984.00	.0
April	2565.00	2605.00	1.0	2735.00	.0
May	2015.00	2100.00	1.0	2205.00	.0
June	2230.00	2320.00	8.0	2436.00	.0
July	1735.00	1700.00	10.0	1785.00	.0
August	1585.00	1664.00	(Planned) 2.0	1747.00	.0
September	1290.00	1354.00	(Planned) 1.0	1422.00	.0
October	1180.00	1239.00	(Planned) 1.0	1301.00	.0
November	1465.00	1538.00	(Planned) 1.0	1615.00	.0
December	1995.00	2095.00	(Planned) 2.0	2200.00	.0
* Total	20840.00	21620.00		22701.00	

Enter the **Store #** and **Category #**.

Enter the **% change from last year to this year** and/or **% change from this year to next year**.

Enter the **Planned turnover: 1st 6 months & 2nd 6 months**, and **Planned Gross Profit %**.

[Copy] copies the current category information to the next category entered if that category has no saved information for it.

[Copy Sales] displays a choice on screen:

What do you want to copy?

Press '1' to copy last year sales to current year sales
Press '2' to copy current year sales to next year sales
Press '[Esc]' to skip the copy

This option is used if you want to duplicate this years planned sales to be exactly as the previous year actual sales, or to duplicate this years sales to be next years sales.

[ReCalculate] automatically fills in the monthly amounts based upon the current year and next year projections and recalculates the planned sales or recalculates the totals if you change the percent. Enter a decrease in planned sales as a negative percent.

The "Last year sales" column does not show figures until you close your month at year-end.

Use % of total store sales and fixed monthly percentages. This option would be used for new stores that have no history records, it allows category percents, monthly sales percentages and monthly markdown percents to be entered, and automatically applies them to the annual total entered for each stores projected sales. The system then calculates each months planned sales for the categories.

	Last year Sales	CURRENT YEAR				NEXT YEAR			
		Sales %%	Sales	Mkdwn %%	Sales %%	Sales	Mkdwn %%		
January	.00	4.0	1000.00	5.0	.0	.00	.0		
February	.00	4.0	1000.00	5.0	.0	.00	.0		
March	.00	5.0	1500.00	5.0	.0	.00	.0		
April	.00	5.0	1750.00	5.0	.0	.00	.0		
May	.00	5.0	1750.00	5.0	.0	.00	.0		
June	.00	7.0	2100.00	5.0	.0	.00	.0		
July	.00	7.0	2800.00	5.0	.0	.00	.0		
August	.00	4.0	3000.00 (Plan)	5.0	.0	.00	.0		
September	.00	5.0	2500.00 (Plan)	5.0	.0	.00	.0		
October	.00	5.0	1500.00 (Plan)	5.0	.0	.00	.0		
November	.00	5.0	2500.00 (Plan)	5.0	.0	.00	.0		
December	.00	4.0	3000.00 (Plan)	5.0	.0	.00	.0		
* Total	.00		24400.00			.00			

Enter the **Store #** and **Category #**.

Enter the **% change from last year to this year** and/or **% change from this year to next year**.

Enter the **Planned turnover: 1st 6 months & 2nd 6 months**, and **Planned Gross Profit %**.

Then enter sales % that that category will contribute to each month's sales. Perform this step for all categories in the store.

[Copy] copies the current category information to the next category entered if that category has no saved information for it.

[ReCalculate] automatically fills in the monthly amounts based upon the current year and next year projections and recalculates the planned sales or recalculates the totals if you change the percent. Enter a decrease in planned sales as a negative percent.

[Store Totals] The following screen will be displayed to enter the total store planned sales:

RICS - Open-To-Buy Maintenance (Store)

Keystrokes Help

Store # ABC Shoes-Downtown

This year's projected sales

Next year's projected sales

	THIS YEAR			NEXT YEAR		
	% of Sales	Sales	% Mkdwn	% of Sales	Sales	% Mkdwn
January	5.0	25000.00	5.0	.0	.00	.0
February	5.0	25000.00	5.0	.0	.00	.0
March	6.0	30000.00	5.0	.0	.00	.0

Clear Save Delete Category Totals Apply Exit

Enter **Store #** and **This year's projected sales** and **Next year's projected sales**. This should be retail dollars, less expected markdowns.

Enter the **% of Sales** for each month and the **Sales** are automatically calculated (total must equal 100%).

Enter the **% of Markdowns** for each month.

[Category Totals] takes you back to the Open-To-Buy-Categories Screen.

[Apply] calculates each month's planned sales based upon the %s set up for each category. The following message will appear:

RICS - Open-To-Buy Maintenance (Store)

What do you want to apply?

Press '1' to apply percentages to current year sales
 Press '2' to apply percentages to next year sales
 Press '3' to apply percentages to current and next year sales
 Press '[Esc]' to not apply anything

(Only future months will be applied to current year sales)

Choose your selection by pressing the appropriate number. If the category percentages do not add up to 100%, the following message appears:

RICS - Open-To-Buy Maintenance (Store)

 Your sales percentages for each category by month do not add up to 100% for NEXT YEAR SALES.

They must equal 100% to apply the store percentages!

Print the percentages using the job 'Print Open-To-Buy File' on the [File Printouts] menu and then correct the percentages to equal 100% before continuing with this process.

OK

If your total does not add up to 100% you should Print Open-To-Buy File to check the totals and correct the percentages to equal 100%. If the percentages all equal 100%, then each categories planned sales are calculated. Now, if you return to the **[Category Totals]** screen, each category has planned sales for each

month.

Sales Tax Override - File Setup

Used for different tax rates for different types of merchandise.

The screenshot shows a software dialog box titled "Sales Tax Override - File Setup". At the top, there are two input fields: "Store #" and "Category #", each preceded by a small icon. Below these is a blue rectangular box with white text that reads: "These sales tax fields will override the information entered in the store file." Underneath this box, there are three identical rows. Each row contains a small input field, followed by the text "Price Threshold", another small input field, and a checkbox followed by the text "Only tax amount over threshold".

This file is optional. It is used in states that have different tax rates for different types of merchandise. In the store file enter the sales tax rate that is the most common for that store. Then, in this sales tax file, enter each category that is taxed at a rate different from that in the store file.

Example: In some states only handbags and some accessories are taxable. Setup a -0- sales tax rate in the store file. Then, in this tax file, enter the sales tax rate for each taxable category.

A **price threshold** can be set to apply the tax over or under the **price threshold**.

Example: If the rate is 5%, the threshold is set at \$50.00, and the **Only tax amount over threshold** is checked, the item is taxed at the specified rate. An item in this category that is \$75.00 would be taxed \$1.25 (\$25.00 over the \$50.00 price threshold). If the **Only tax amount over threshold** is unchecked, then the tax would be \$2.50 (tax the first \$50.00).

Case Packs - File Setup

Create a pre-set group of quantities for selected size types.

Case packs are a pre-set group of quantities you create for selected columns and rows. They are used in any option that allows size entry, to speed up the entering of data. To use case packs, you would enter the case pack number and the standard case pack quantities (entered on this screen after size type is entered) would be automatically displayed. Make your own case packs for sizes you normally carry in your store (such as a standard 24 pair size run). When entering information for a SKU, only case packs set with the same size type are displayed.

Case Pack: Can be up to 6 characters in length of numbers, letters, or combination of the two.

Description: Can be up to 20 characters in length describing the case pack (i.e. 24 pair women's N-W).

Size Type: Is a required field. See Size Types.

Communications - File Setup

File Setup for Store Communications

A communications file must be set up for each store and each POS/register at the location you want to communicate with. You also have the option to set up which files you want to transfer to each location.

Store # is the store number that the modem will be calling.

Register is any letter A through Z. If you are only communicating with one POS/register at a store, set that register to A. Each subsequent register at a store will be: B, C, etc.

Phone # is the phone number that the main computer calls to connect with the POS/register. For touch-tone service, preface your phone number with a 'T' (e.g. T15152708182). If you have "call waiting", you can disable call waiting by prefacing the phone number with 'T*70,' (Note: make sure you include the comma after the zero and before your phone number) (e.g. T*70,15152708182). You can call more than one POS/register on the same phone # by setting the POS/register to answer on a different number of rings.

Note: If you are communicating with a register via the internet or a LAN connection, place the word '**INTERNET**' in the phone number. If you are communicating via a direct connect cable, place the word '**DIRECT**' in the phone number.

Baud is the speed of your modem. Valid choices are **1200, 2400, 9600, 14.4, 19.2, 38.4**, or **57.6**. DO NOT enter a speed faster than your modem will communicate. Make sure your main and your POS computers are set at the same baud rate to communicate.

Use CTS Flow Control for file transfers should be checked on.

RICS Version is the current **RICS** version on this POS register. If the POS register is not on the current RICS version, you will not be able to send any data files to it.

Note: The entire file is not downloaded; only the changes in the file since the last communication was done will be sent.

To Send Files:

Check the files you want to transfer to each location. All files do not need to be downloaded all the time. The files to download each time may include:

Send SKU & Store changes sends changes to SKU #'s, store information.

Send Inventory changes sends changes to SKU's for Inventory Inquiry information.

Send Purchase Order changes sends changes to Purchase Order information.

Send Mail list changes sends changes to Mail List information.

Send Unprinted Stock Labels sends changes to print Stock Labels (Use only if the location is going to print stock labels at that location).

Since: This will usually be the date and time of the last successful communications. Only new information would be sent to the POS register(s). This would need to be changed if a register(s) were updated with a diskette. The date and time would then need to be changed to when the backup was done, not the restore.

Send Pictures: When selected will send all pictures with a modification date later than the 'Changes Since' date. When unselected, no picture file will be sent.

Send for all stores: (Send Inventory changes) When checked would download the information for all stores to the selected store, which would give that store the ability to inquire on all other store's inventory. Unchecked would download only the information for that store's changes.

Send inventory detail: (Send Inventory changes) When checked will send all the inventory change records for each Store/SKU's inventory record that is sent. This will allow the store to see up-to-date inventory change detail in the Inquiry screen.

Send for all stores: (Send Purchase Order changes) When selected would download the information for all stores to the selected store, which would give that store the ability to inquire on all other store's purchase orders. When unselected would download only the purchase orders that the selected store is a party to by being the bill-to or ship-to store.

Send mail detail: (Send Mail List changes) When checked would download the mail list detail information for all stores to the selected store, which would give that store the ability to see the mail list detail for all other stores.

Users - File Setup

Passwords can add security, restrict access, and track which options have been used.

User: can be any combination of numbers and/or letters up to 12 characters.

Password: can be any combination of numbers and/or letters up to 12 characters. A password can be changed for an existing ID.

Name: Name of the employee.

Functions allowed / not allowed: Will be used to restrict access to particular options on the menu. In the Functions allowed column hold down (continue to hold down) the **[Ctrl]** key and go through each menu option and click the left mouse button to select (highlight) the choices that should be restricted, then click the

to move them over to the Functions not allowed column. To allow functions that were not allowed select (highlight) the options in the not allowed column as above but click the

to move them back to the allowed column.

[Select All] / [Unselect All]: Highlights / Un-highlights all items in the appropriate columns.

If you are setting up multiple users you can copy their settings by checking the **Copy parameters from USER** check box.

Copy parameters from JOHNNY ☒

To copy parameters:

- Select a user that has their printer's, super jobs, and reports setup.
- Click the **[Copy]** button to keep the loaded users **Functions Allowed / Functions Not Allowed** settings the same and enter the new **User ID, Password, and User Name**.
- If you want them to have the same reports, super jobs, and printer settings, check the Copy parameters from check box.
- Change any **Functions Allowed / Functions Not Allowed** settings
- Click the **[Save]** button.

Keywords - File Setup

Keywords are a flexible way to group SKUs with common characteristics together

The screenshot shows a Windows-style dialog box titled "RICS - Keyword File Setup". It has a menu bar with "Keystrokes" and "Help". The main area contains two text input fields: "Keyword" with the text "CINDY" and "Description" with the text "Cindy's special SKUs". To the right of these fields are five buttons: "Clear", "Save", "Delete", "Copy", and "Exit". At the bottom, there is a section labeled "Keyword description" and a table with one row labeled "Existing Record" and three columns labeled "INS", "CAPS", and "NUM".

A **Keyword** is used to assign characteristics to SKUs in order to run reports on SKUs with the same characteristics (same keyword(s)). Unlike a group code, a single SKU can have many different keywords. This will allow 1 SKU to fall into multiple keyword groups. If you were having a sale on some SKUs and wanted to see how the sale did by running a Sale Analysis Report, and also wanted to identify some of those same SKUs (along with other non-sale SKUs) in order to run a Stock Status Report for re-ordering purposes, you could assign the Sale SKUs a keyword 'SALE' and the reorder items a keyword 'REORDER'. Then you could run both the Sales Analysis and Stock Status reports to pinpoint the exact SKU's you need to track.

Keyword: 1 to 10 characters (no spaces). The shorter your keywords are, the more keywords a SKU may have.

Description: Can be up to 20 characters in length describing the keyword.

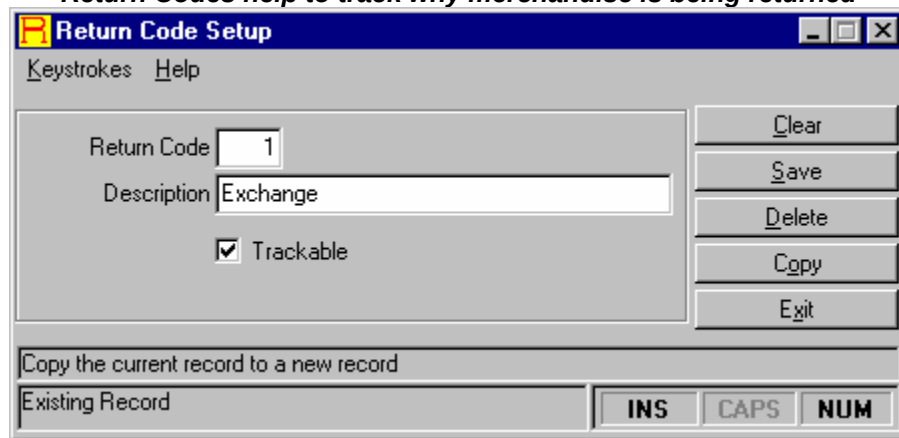

Assign keywords to SKUs: Add, change or delete the keywords for an SKU in SKU Maintenance.

Reports by Keywords: In many reports where setting criteria is an option, you may limit the report to only SKUs that meet assigned keyword criteria. See Sales Reports.

Printing a Keyword List: To print a list of all or selected groups.
See Print Keywords.

Return Codes - File Setup

Return Codes help to track why merchandise is being returned

The image shows a 'Return Code Setup' dialog box. It has a title bar with a red 'P' icon and the text 'Return Code Setup'. Below the title bar are two menu items: 'Keystrokes' and 'Help'. The main area contains a 'Return Code' field with the value '1', a 'Description' field with the value 'Exchange', and a 'Trackable' checkbox which is checked. To the right of these fields are five buttons: 'Clear', 'Save', 'Delete', 'Copy', and 'Exit'. At the bottom, there is a section titled 'Copy the current record to a new record' with a label 'Existing Record' and three buttons: 'INS', 'CAPS', and 'NUM'.

INS CAPS NUM

A Return Code is used in the Sales Screen to identify the reason a customer is returning an item. You may have up to 99 return codes. A report is generated for all returns that are checked as trackable while Posting Sales to Inventory. This will help you to correct the inventory for damaged returns or identify other recurring problems with your merchandise.

Return Code: A number from 1 to 99

Description: Can be up to 20 characters in length describing the return code.

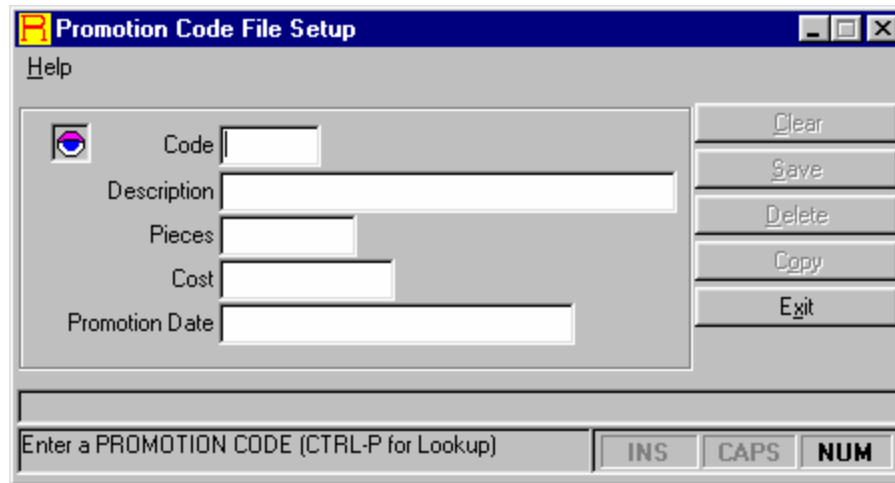

Trackable: When checked, trackable returns are printed out when posting sales to Inventory.

Printing a Return Code List: To print a list of all or selected return codes, see Print Return Code File.

Returns may be summarized by code in the Sales Journal. Return Codes can be forced to be entered with any returned merchandise on the Sales Screen. Please call CSI Support to explore these options.

Promotion Codes - File Setup

Promotion Codes help to track and analyze your promotions

A **Promotion Code** is used in the *Sales Screen* to identify why a customer was brought into the store. It may be a mailer, newspaper ad, coupon, or e-mail campaign. You may have up to 99 return codes. report is generated for all returns that are checked as trackable while *Posting Sales to Inventory*. This will help you to correct the inventory for damaged returns or identify other recurring problems with your merchandise.

Code: Any 6 character code to identify the promotion. It must be something the customer will be able to communicate to the cashier.

Description: Can be up to 20 characters in length describing the promotion

Pieces: Knowing how many mailers or e-mails were distributed will allow RICS to track a response rate.

Cost: Knowing how much the promotion cost will allow RICS to report on your profit or loss on the promotion.

Printing a Promotion Code List: To print a list of all or selected promotion codes, see [Print Promotion Code File](#).

The [Promotion Analysis Report](#) will print summarize the sales attributed to a promotion and compare them to the pieces and cost of the promotion.

FILE PRINTOUTS

- Overview

Will print out selected information for the selected files

All printouts will allow you to select ranges for the information you want on the selected files, and also enter report comments. File Printouts may be printed to your printer or sent to your screen spool file.

Add Job and Run

Allows you to add this job and run it now, or [Alt] + [R].

Add Job and Continue

Allows you to add this job, and continue to add items to the job list, or [Alt] + [C].

Print - Store File

Will print the Store file for the selected stores

You may select a range of stores for the information you want to print, and enter report comments.

This report is useful to run at the end of the month. It contains totals for each type of tender and each type of transaction. These reports will also breakdown your sales percentages by tender type for the month and year.

Print - Sector File

Prints the Sector file for the selected sectors

You may select all sectors by leaving the sector option blank. Or you can print a range of sectors by entering the sector codes (up to 2 digits) for the selected information you want to print, See Criteria or Wild Cards for more information. You may also enter report comments.

Print - Department File

Will print the Department file for the selected departments

You may select all departments by leaving the department option blank. Or you can print a range of departments by entering the department codes (up to 2 digits) for the selected information you want to print, See Criteria or Wild Cards for more information. You may also enter report comments.

Print - Category File

Will print the category file for the selected categories

You may select all categories by leaving the category option blank. Or you can print a range of categories by entering the category codes (up to 3 digits) for the selected information you want to print, See Criteria or Wild Cards for more information. You may also enter report comments.

Print - Group File

Will print the group file for the selected groups

You may select all groups by leaving the group option blank. Or you can print a range of groups by entering the group's code (up to 3 characters) for the selected information you want to print, See Criteria or Wild Cards for more information. You may also enter report comments.

Print - Size Type File

Will print the size type file for the selected size types

You may select all size types by leaving the size type option blank. Or you can print a range of size types by entering the size type codes (up to 3 digits) for the selected information you want to print, See [Criteria](#) or [Wild Cards](#) for more information. You may also enter report comments. You may also print the NRF Codes.

Print - Vendor File

Will print the vendor file for the selected vendors

You may select all vendors by leaving the vendor option blank. Or you can print a range of vendors by entering the vendor codes (up to 4 characters) for the selected information you want to print, See [Criteria](#) or [Wild Cards](#) for more information. You may also enter report comments.

You may also print account numbers for each store.

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Print - SKU File

Will print the SKU List, Price List, or Future Price Changes

Print SKU File

INS CAPS NUM

You may enter report comments based on how you want to print this list

Select the type of report you want to print:

SKU List - will print all information for the SKU, including Location, Perks, and Oversizes.

Price List - will print the only the SKU#, Description, and Price.

Future Price Changes - will print Date of Changes, SKU#, Description, Color & Price.

You also will need to select how to sort the report by: **SKU, Vendor SKU, Vendor, Category, Group**, or **Season**. You may also choose to **Include Cost** or **Print only SKUs with Perks**, or choose both.

When running the SKU List, you may choose to include a second line of SKU information by checking the **'Use 2 lines for SKU information'** box. The second will contain the comment, picture file name and coupon status.

Criteria is also a selection option. See **Criteria** or **Wild Cards** for more information.

Export as comma delimited file checkbox allows you to export the sales analysis report to a comma-delimited file specified in the **Export Filename** text box. The Export Filename must have a file extension of ".TXT" or ".CSV".

Print - Open-To-Buy Plan File

Will print the Open-To-Buy Plan file for the selected Stores

You may select a range of stores for the information you want to print, and enter report comments.

Print - Sales Tax Override File

Will print the Sales Tax Override file for the selected stores

You may select a range of stores for the information you want to print, and enter report comments.

Print - Casepack File

Will print the case pack file for the selected casepacks

You may select all casepacks by leaving the casepack option blank. Or you can print a range of casepacks by entering the casepack codes (up to 6 characters) for the selected information you want to print, See **Criteria** or **Wild Cards** for more information. You may also enter report comments.

This will print all information about the casepacks including size types, totals and totals by row.

Print - Communications File

Will print the Communications file for the selected stores

You may select a range of **Stores** and **Registers** for the information you want to print, and enter report comments.

Print - User File

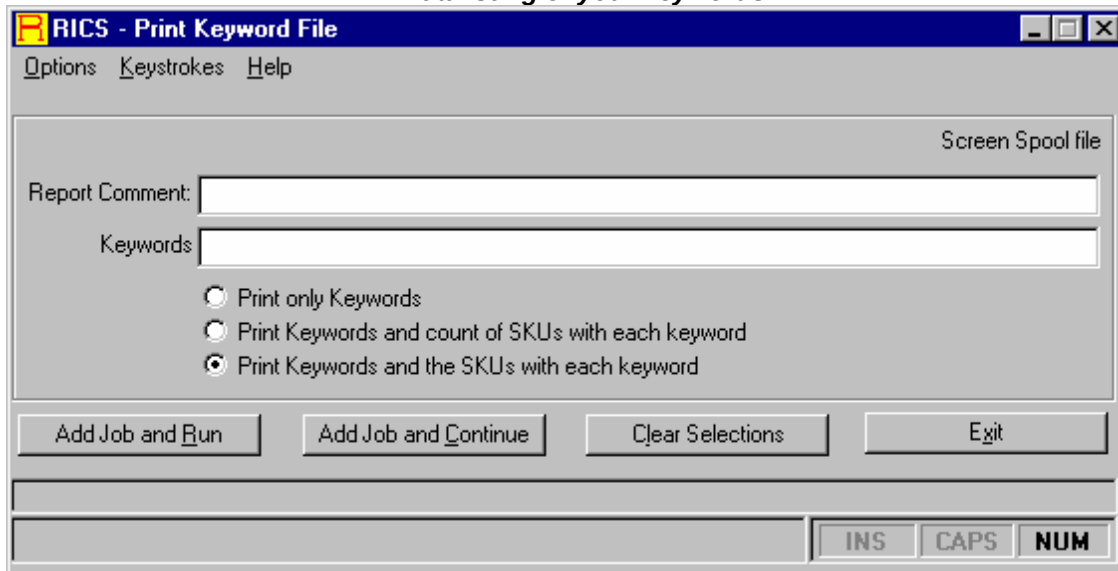

Will print the user file for the selected users

You may select a range of users for the information you want to print, and enter report comments.

You may also print functions not allowed.

Print - Keyword File

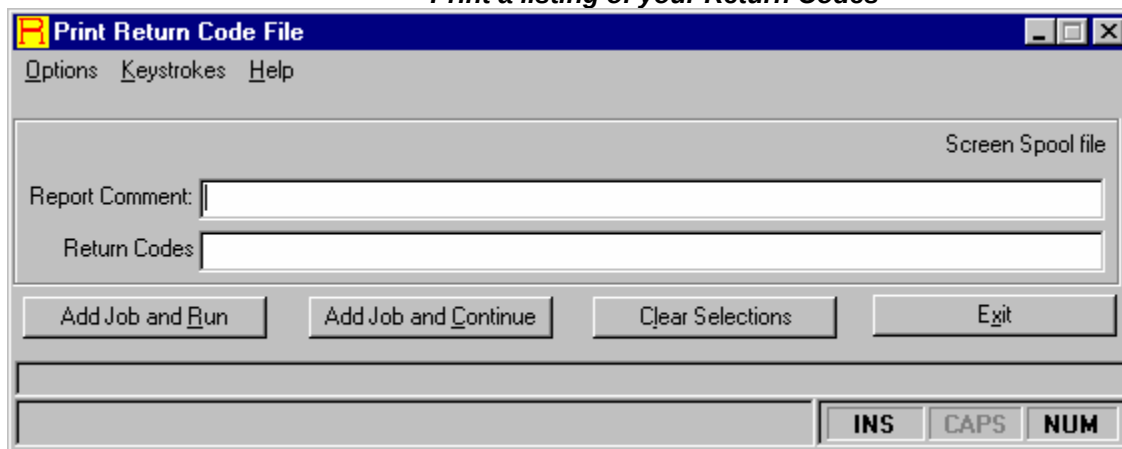

Print a listing of your keywords

You may select all keywords by leaving the 'Keywords' selection blank or you may select keywords just like entering any other report criteria (see [Criteria](#) or [Wild Cards](#) for more information). You may also obtain a list of all SKUs associated with each keyword, a count of the SKUs associated with each key word, or a list of the keywords by selecting the appropriate option button.

Print – Return Code File

Print a listing of your Return Codes

You may select all return codes by leaving the 'Return Codes' selection blank or you may select return codes just like entering any other report criteria (see [Criteria](#) or [Wild Cards](#) for more information). When selecting return codes, please keep in mind that return codes are numeric.

POINT OF SALE

Copy From POS Diskette

To copy information from a POS diskette

Use this option to read POS transactions, and mail list changes, also inventory changes (if doing a Main setup at POS) from a diskette. **When the copy has successfully completed, the files are erased from the diskette.**

Path: This is the path to the location where the files from the POS are located. You can enter a diskette path (usually 'A'), a local data path, networked data path, or a CD-ROM.

[Process] or **[Alt] + [P]** will begin to copy the POS files from the diskette. You can repeat for more than one sales diskette and/or stores.

After copying the sales diskettes you must Print Sales Journal and Post Sales to Inventory before the items sold are deducted from inventory and the sales dollars and quantities will increase.

Sales Diskettes: It is recommended having a diskette for each day of the week. Label the diskettes: Sales Disk- Monday, Sales Disk- Tuesday, Etc. Don't use these diskettes for anything but transferring sales.

Send Messages to Stores

To send a message to POS Stores when communicating

This option is available on both the main computer and the POS computer. However, on a POS computer, there is no need to specify which stores to send to, because all messages will go to the main computer.

Whenever the main computer calls the POS computers, messages are transferred from the main computer to the POS computer and from the POS computer to the main computer. Because messages print automatically, the store should leave their POS printer on when doing communications.

Send to Stores: enter the store #'s you want to send messages to.

Message: Write your message.

[Save] the message to send when you Call POS Registers.

Call POS Registers

To Schedule a call to your POS/registers

Use this option on your main computer to receive POS transactions, mail list changes, and any messages from the POS computer(s). Optionally, updated information can be transferred to the POS computer(s).

Note: The entire file is not downloaded; only the changes in the file since the last communications are sent.

Before using this option you need to setup Communications for the store(s) you want called, and indicate the COM port the modem and/or direct connect cable is connected to in Communications Setup.

Report Comment: Can be made and the setup Options saved to be retrieved later.

Stores: Indicate the store(s) to be called. The default for this field is the stores setup in Communications.

Registers: Indicate the register(s) to be called. **Leave Blank to Call ALL Registers.**

Select from the following options when you want the communications to occur:

Call Immediately

Call at the default time of (The default is 4:00 AM the next morning.)

Schedule call a box will appear where you can enter the date and time to call. The date is entered in a MM/DD/YY format. The time is entered in the 24 hour format. (For example: to call October 29,1998 at 10:00 PM you would enter 10/29/98 22:00.)

Do you want to send data to these Stores/Registers check/uncheck the box.

If you will be calling these stores again after you post your sales, you can create a Super Job to automatically Call Stores to receive their sales (**Do not send Data to Stores**), Print Sales Journal, and Post Sales to Inventory then Call Stores again and (**Send Data to Stores**). By doing your calls this way your POS will be up to date at the start of every day.

Registers

Add Job and Run Add Job and Continue Clear Selections Exit

Add the job to the job list and continue working

INS CAPS NUM

Use this option on your main computer to receive POS sales, mail list changes, inventory change, and messages that your registers have previously stored on the internet. You may also create files of data you have changed since your last communication on the Internet for your POS registers to download later.

Before using this option you need to setup a Communications record for any registers you want to send data to and indicate your Internet data transfer method in Communication Setup.

Report Comment: Can be made and the setup Options saved to be retrieved later.

Collect Data: Selecting this option will cause the job to retrieve any files your POS registers have previously sent. The data is unzipped and merged with the main office data.

You may schedule the data collection in one of the following 3 ways:

Collect Immediately

Collect at a default time: (The default is 1:00 AM the next morning, but can be changed.

Contact CSI to find out how.)

Schedule at a specific date/time: A box will appear where you can enter the date and time to collect your data. The date is entered in a MM/DD/YY format. The time is entered in the 24-hour format. (For example: to call October 29,2000 at 10:00 PM, you could enter 10/29/00 22:00.)

Send Data: Selecting this option will cause the job to create a file for each selected POS register. This file will contain any changes since the last time a file was created for the POS register and will be sent to the internet for the POS register to download and merge. **If you have opted to both collect and send data in the same job, the data will be collected and merged first.**

You may schedule the sending of data in one of the following 3 ways:

Send Immediately

Send at a default time: (The default is 3:00 AM the next morning, but can be changed.

Contact CSI to find out how.)

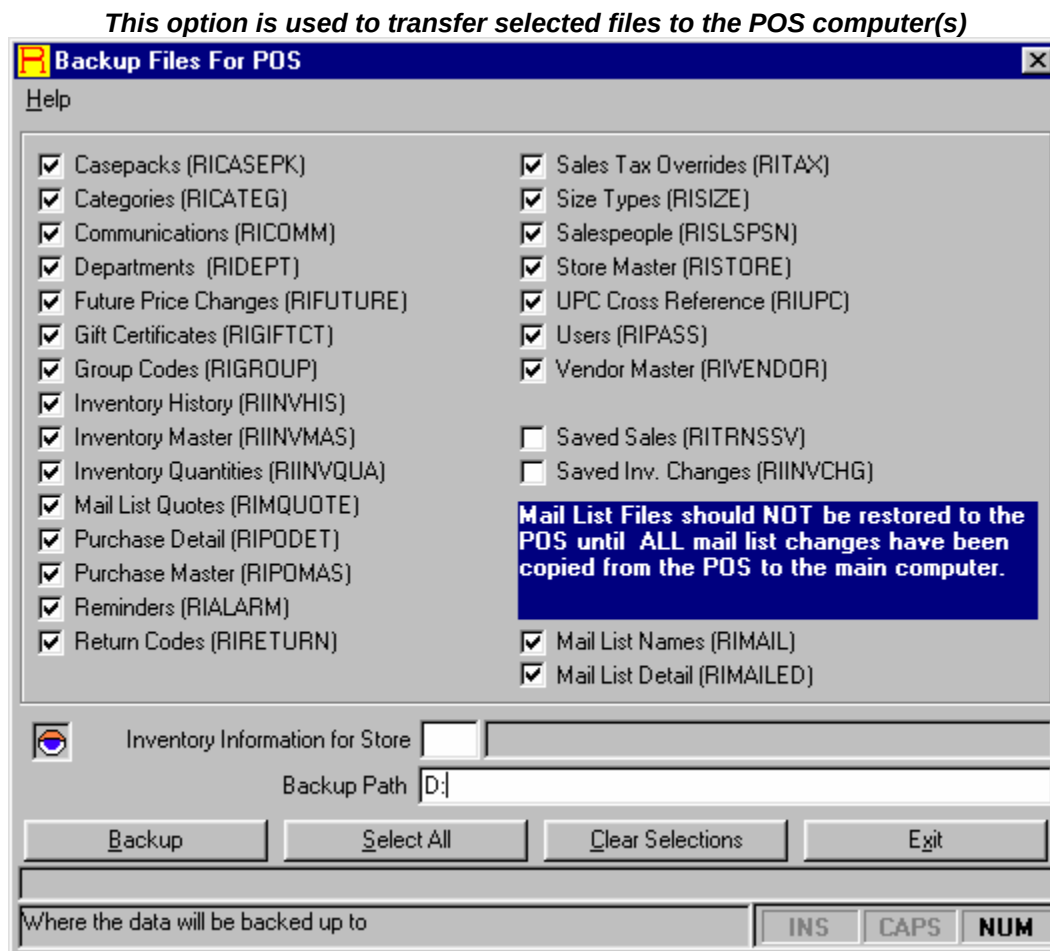

Schedule at a specific date/time: A box will appear where you can enter the date and time to collect your data. The date is entered in a MM/DD/YY format. The time is entered in the 24-hour format. (For example: to call October 29,2000 at 10:00 PM, you could enter 10/29/00 22:00.)

Stores: Indicate the store(s) you will be creating files for. The default is the stores setup in Communications to communicate by Internet.

Registers: Indicate the register(s) to be included. **Leave Blank to Call ALL Registers.**

If you want to post your sales after you have received data but before you send data to the registers, You can create a Super Job to automatically Poll the registers (**without sending data**), Print Sales Journal, Post Sales to Inventory, then Poll the registers again (**sending data this time**). By communicating this way your POS will be up to date at the start of every day.

Backup Files for POS

Selecting the files to backup: Check the file(s) to be backed up. Unchecked indicates the file should not be backed up. All files do not need to be backed up at all times. The files to usually backup will be as shown above. The **Mail List Names**, and **Mail List Detail**, should be backed up together, but never restore at the POS in the middle of the day. Usually, these do not need to be backed up because names are usually entered at the POS.

You may backup to a different disk drive or directory path by changing the **Backup Path**. The next time you go into this screen, the default backup path will be displayed in this field.

If you have the '**Inventory Information for Store**' option enabled in the RICS.CFG file, you may specify that the backup only include the inventory and purchase order information for 1 store. This option will make the backup take considerably longer. Please contact Technical Support if you would like to know more about this option.

[Backup] or **[Alt] + [B]** will perform the backup of the selected files.

To change your backup location in Change RICS.CFG in the **Section** box select **General**, in the **Item** box select **PKZIP POSDRIVE** and in the line for **Entry** type in the location to place your backup.

Diskettes: It is a good idea to have diskettes labeled, '**Backup Files for POS**', used exclusively for updating the POS computer(s) with new information. Do not use these diskettes to transfer sales.

Information needs to be transferred to the main computer either by communicating or by diskette.

Three things happen each time a current transaction file is transferred. 1) The current files are sent by modem/direct connect. 2) An "archive" copy of the current file is created. 3) The current file is deleted as current, but is now archived as an old file 1 time ago, should you need to copy it again.

Report Comment: Can be made and the setup Options saved to be retrieved later.

Send which Sales file: Check your choice. (**Normal choice is Send Current Sales**)

Don't send - will not send any sales transactions.

Send Current Sales - will send any sales transactions since the last time this file was copied to diskette or transferred.

Send Old Sales - to send previous sales transactions files from one to ten times ago. A box will appear and ask **times ago** next to this will be a box listing the last ten sales files with the date transmitted and first ticket.

Send which Mail List changes: Check your choice. (**Normally Send Current Changes**)

Don't send - will not send any mail file changes.

Send Current Changes - will send any mail file changes since the last time this file was copied to diskette or transferred.

Send Old Changes - to send previous mail file changes from one to ten times ago. A box will appear and ask **times ago** next to this will be a box listing the last ten mail file changes with the date transmitted.

If you have RICS MAIN at POS installed:

Send Inventory changes: Check your choice. (**Normally Send Current Changes**)

(Inventory changes include Purchase Order changes and receipts, manual receipts, returns and transfers.)

Don't send - will not send any Inventory changes.

Send Current Changes - will send any Inventory changes since the last time this file was copied to diskette or transferred.

Send Old Changes - to send previous Inventory changes from one to ten times ago. A box will appear and ask **times ago** next to this will be a box listing the last ten Inventory file changes with the date transmitted.

If you are communicating by modem:

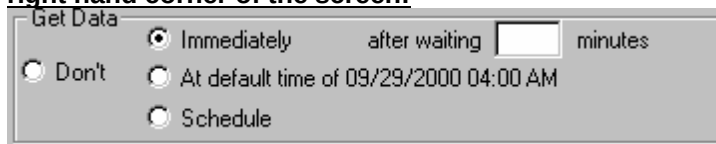

Answer on ring: This is the number of rings the phone should ring before it is answered by the modem (Normally 1 or 2). Enter **D** if using a Direct Connect Cable.

Baud is the speed of your modem. Valid choices are **1200, 2400, 9600, 14.4, 19.2, 38.4**, or **57.6**. DO NOT enter a speed faster than your modem will communicate. Make sure your main and your POS computers are set at the same baud rate to communicate.

Wait for second call should be checked on if communicating twice.

Use CTS Flow Control for file transfers should be checked on.

If you are communicating by internet or LAN connection you will see the following frame in the lower right hand corner of the screen:

The screenshot shows a dialog box titled "Get Data". It contains four radio button options: "Immediately" (which is selected), "Don't", "At default time of 09/29/2000 04:00 AM", and "Schedule". To the right of the "Immediately" option, there is a text field labeled "after waiting" followed by "minutes".

The POS data will be sent immediately, but you may use this frame to determine when or whether you receive any data that the main computer has left for you. If you do not want to receive any data, select the **'Don't'** button. If you want to receive the data immediately after sending, select the **'Immediately'** button (you may add a delay by entering a number in the **'after waiting ... minutes'** box). You can also schedule receiving data at a specified time by using the **'Schedule'** button and filling in a time or simply use receive the data at a preset **'default time'**.

This option may be used to import sales from an internet store or any other source that can create a comma delimited file adhering to the RICS import specifications. The file will be vigorously validated. If any data is incorrect, the entire file will be rejected and the sales will not be placed into the RICS system. The RICS sales import specification is listed below. It will be up to you or your web store provider to export the file according to the RICS sales import specifications. If you or your provider has any questions about the RICS sales import specifications, please contact [*RICS Technical Support*](#).

File Name - the name of the file that will be imported. Include the full path name and drive letter. If there are any exceptions, a journal will be generated and **No sales will be imported**. If there are no exceptions, the sales will be merged into the existing sales file and the job will end. **Under no circumstances will RICS delete the import file.**

After importing the sales file you will have to print the Sales Journal and Post your Sales to Inventory before the items sold are deducted from inventory and the sales dollars and quantities will increase.

RICS SALES IMPORT FILE SPECIFICATIONS

The Import File will be a comma-delimited file.

Each record must end in a carriage return/line feed.

Putting each field in quotes is preferable, but not required.

Blank lines are allowed and will be ignored.

Batch Record (Starts a new batch, must be the first record in the file)

<u>Field #</u>	<u>Name</u>	<u>Value</u>	<u>Comment</u>
1	Code	"B"	Signifies a batch record
2	Batch Date	Valid Date/Time	The date this batch was started
3	Use Date	Valid Date	The effective date of the tickets (may be blank)
4	Store	RICS Store	

Ticket Header Record (Starts a new ticket)

<u>Field #</u>	<u>Name</u>	<u>Value</u>	<u>Comment</u>
1	Code	"H"	Signifies a header record
2	Batch Date	Valid Date/Time	Must agree with the previous batch record's field
3	Use Date	Valid Date	Must agree with the previous batch record's field
4	Store	RICS Store	Must agree with the previous batch record's field
5	Ticket Number	1-99999	Should be unique within the batch
6	Actual Date	Valid Date/Time	Date/Time Stamp for this ticket
7	Cashier	RICS Cashier	
8	Account	1-10 characters	
9	Tax 1	Amount of the 1st store tax	
10	Tax 2	Amount of the 2nd store tax	
11	Tax 3	Amount of the 3rd store tax	
12	Other Charge	Amount of Other Charges	
13	Change	Amount of Change	
14		Comment	1024 characters
15	ShipState	2 characters	
16	ShipCounty	10 characters	
17	ShipCity	25 characters	
18	Promotion Code	6 characters	

Ticket Detail Record (SKUs sold on a ticket)

<u>Field #</u>	<u>Name</u>	<u>Value</u>	<u>Comment</u>
1	Code	"D"	Signifies a detail record
2	Batch Date	Valid Date/Time	Must agree with the previous ticket header record's field
3	Use Date	Valid Date	Must agree with the previous ticket header record's field
4	Store	RICS Store	Must agree with the previous ticket header record's field
5	Ticket Number	1-99999	Must agree with the previous ticket header record's field
6	Actual Date	Valid Date/Time	Must agree with the previous ticket header record's field
7	SKU	RICS SKU	
8	Column	RICS Size Column	May be blank
9	Row	RICS Size Row	May be blank
10	Qty	999 to -99	
11	Price	2 decimal places	Price per item
12	Salesperson	RICS Salesperson	If blank, cashier will be used
13	Family Member	RICS Family Member	May be blank
14	Tax 1		Line Item Tax Amount of the 1st store tax
15	Tax 2		Line Item Tax Amount of the 2nd store tax
16	Tax 3		Line Item Tax Amount of the 3rd store tax
17	UPC	RICS UPC	
18	Perks		Amount of Perks to be credited to the Salesperson

Ticket Tender Record (Amounts tendered on a ticket)

<u>Field #</u>	<u>Name</u>	<u>Value</u>	<u>Comment</u>
1	Code	"T"	Signifies a tender record
2	Batch Date	Valid Date/Time	Must agree with the previous ticket header record's field
3	Use Date	Valid Date	Must agree with the previous ticket header record's field

4	Store	RICS Store	Must agree with the previous ticket header record's field
5	Ticket Number	1-99999	Must agree with the previous ticket header record's field
6	Actual Date	Valid Date/Time	Must agree with the previous ticket header record's field
7	Tender Code	RICS tender (1 to 12)	Must be valid in the store file
8	Tender Amount	2 decimal places	

UTILITIES 1

Backup Data

Backups your data to diskettes, CD or Zip disk

Backup your data daily!!! CSI recommends that you backup your data at least once a day, if not more often. When you enter data on your computer it is being stored on your hard disk. Backups are done as an "insurance policy" to prevent data loss. It is not common, but situations can occur that can cause your data to become damaged or lost. Your data is valuable, so protect it. Backing up copies your data information from the hard disk to diskettes, over-writing what was previously on those diskettes. If you have a problem with your computer you can then restore the data from the diskettes on to a different computer, you would then only lose data entered since the last time you backed up your data.

Do not use this option to backup data to update your POS computers, use Backup Files for POS instead.

Daily Backups - We **strongly recommend** that at least seven sets of backup diskettes (One labeled for each day of the week) be kept in the office.

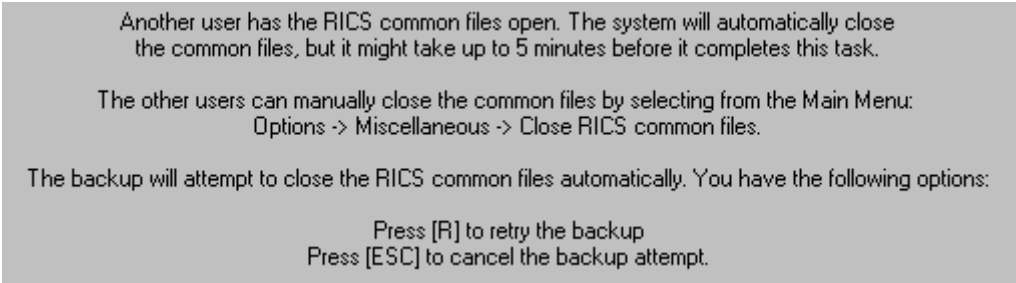

Monthly Backups - It is wise to use different diskettes labeled for each month (12 sets of backup diskettes). This provides additional security, and provides the ability to re-run that month's reports at a later time if needed. **Also, we recommend** having one set of backup diskettes **stored off the premises** and updated periodically, such as weekly, bi-weekly, or monthly.

If you check the **End of Month Backup** check box, the **Backup Path** will change to the PKZIP DRIVE\YYYYMMM\ . An example would be if **PKZIP DRIVE** was C:\RICSWIN\, and you are backing up in 2003 with the Current Month set to 2 the new **Backup Path** would C:\RICSWIN\2003FEB\ . If the directory does not exist, you are prompted to create the new directory. If you chose yes, the backup creates the directory and continues normally. If you chose no, the backup stops without completing.

To change your diskette drive location in Change RICS.CFG in the line for **Section** type in **General** on the line for **Item** type in **PKZIP DRIVE** and in the line for **Entry** type in the location of the drive.

You can now backup to CD if you have a Read/Write CD-Rom, saving you time and requiring only 1 CD, compared to multiple diskettes. You should still use a different CD for each day!!

An enhancement called RICS common files was made to increase speed between the POS computers and the data server. If you attempt to backup and other computers are in RICS, you may receive the following message:

Another user has the RICS common files open. The system will automatically close the common files, but it might take up to 5 minutes before it completes this task.

The other users can manually close the common files by selecting from the Main Menu:
Options -> Miscellaneous -> Close RICS common files.

The backup will attempt to close the RICS common files automatically. You have the following options:

Press [R] to retry the backup
Press [ESC] to cancel the backup attempt.

The RICS common files must be closed to guarantee an accurate backup. RICS will automatically close those files when there is no activity for 5 minutes. The user attempting to backup can have the other users close their RICS common files by using the menu option Options -> Miscellaneous -> Close RICS Common Files. Once the common files are closed the backup will proceed automatically. To retry before the 30 second automatic retry, press the **[R]** key. Pressing any other key, or clicking on the form will cancel the backup process.

Restore Data

Restores Data from diskettes, CD or Zip Disk

IMPORTANT: Make sure you know what you're doing before restoring information
ALL YOUR CURRENT DATA ON THE COMPUTER WILL BE OVER WRITTEN.

Restoring is the opposite of backing up. Restoring copies information from diskettes to the hard disk, overwriting what was previously on the hard disk.

Look at Job List

Look at or change Jobs scheduled to Run

Many **RICS** menu options (i.e. reports) can be put with other options into a Job List which can then be run at one time. You can use this multi-task option by clicking **[Add Job and Continue]** or **[Alt] & [C]** instead of **[Add Job and Run]** on the report selection screens. It will display the status of all jobs submitted and let you cancel, or change the priority of the jobs submitted. To run the same set of Jobs over you can create Super Jobs.

Click on the Job you want to change. The following keys will make these changes to the Job List:

Priority	Click the arrows to move the selected Job up or down in the Pri (Priority) list.
[Hold Job]	Puts the task on hold (it will not run until it is released).
[Release Job]	Releases job previously put on hold.
[Delete Job]	Deletes or cancels the job from running.
[Reset Output]	Changes the output of the selected job to the output of the current <u>Printer Setup</u>
[Refresh]	Redisplays the Job List to display any new changes
[Start Jobs]	Starts (or Runs) the jobs

Look at Screen Spool File

Look at Screen Spool file (Output/Reports) on Screen

This option is used to view reports, journals, logs, etc. that are printed to a screen spool file (Instead of directly to a printer). This option will let you look at and manipulate the screen spool file. See Printer Setup, for more information on how to print to a screen spool file.

Selecting a Report - highlight the report. Once the appropriate report is selected, click **[OK]**.

Note: The Screen Spool Files are listed in the format: **User**, **Date** (YYear, MMonth, DDate), **Time** (HHours,MMminutes,SSseconds), **Report Name**. **Example:** JOHN 1998-11-16 123141 Salesperson List.scn would mean the Salesperson List was run by JOHN on 11/16/1998 at 12:31:41 the .scn at the end of the report name refers that it is a screen spool file. **All reports will always be listed in the order they were ran, with the most recent reports listed first.**

Deleting a Screen Spool File - Deleting a screen spool file will NOT delete any data. It is the equivalent of "throwing away" a printed report. It is a good idea not to have too many screen spool files. If you need to keep a report, print it out and then delete it. If you do not need to keep a report, click **[Delete]** or **[Alt] + [D]**. This will delete the highlighted or the displayed screen spool file.

Deleting more than one Screen Spool File - To delete more than one screen spool file at a time, highlight the first screen spool file you want deleted, hold down the **[Ctrl]** key then click the mouse on the next file you want deleted and continue till you are finished selecting, click **[Delete]** or **[Alt] + [D]**. This will delete the highlighted screen spool files.

Deleting ALL Screen Spool Files - To delete ALL screen spool files click **[Delete All]**.

Printing a Screen Spool File - To print a report from the selection screen without viewing it, select the report in the list you want to print. Click the **[Print]** button or **[Alt] + [P]**. To print multiple screen spool files, select the files you want to print by holding down the **[Ctrl]** key and then clicking each file you want to print. To print a range of pages, you must print after displaying the report on the screen.

Export a Screen Spool File to PDF - To export a report to PDF (Portable Document Format) from the selection screen without viewing it, select the report in the list you want to print. Click the **[PDF]** button or **[Alt] + [F]**. To export multiple screen spool files, select the files you want to export by holding down the **[Ctrl]** key

and then clicking each file you want to export. To export a range of pages, you must export after displaying the report on the screen.

Viewing a Report on the Screen - Because a printed report can be up to 230 columns wide and most screens are only 80 columns wide not all of a report will fit on the screen at once. Use the arrow keys to navigate the screen.

To move Up or Down:

Click the **Line** box arrows in either direction to move one line at a time, or click and hold the mouse, after a brief pause you then scroll in the direction you choose. The **up/down arrows** on the keyboard will also move 1 line in that direction, or hold down to scroll.

Click the **Page** box arrows in either direction to move one screen at a time, or click and hold the mouse, after a brief pause you then scroll by page in the direction you choose. The **[Page Up]** and **[Page Down]** keys will shift an entire screen at a time, or hold down to scroll.

The vertical scroll bar may be used to move to an approximate section of the report.

The **[Home]** key will jump to the beginning of the report; the **[End]** key will jump to the last page of the report.

To Left or Right:

Left Click and hold you mouse on the scroll bar and move your mouse in the direction you want to move, or click the box arrows in either direction to move one line at a time, or click and hold the mouse, you then scroll in the direction you choose. The **left/right arrows** will move 10 columns in the direction of the arrow. **[Shift] + left/right arrows** will move 1 column in the direction of the arrow. **[Ctrl] + left/right arrows** will move to the beginning/end of the row.

Selecting a Different Report - When you are looking at an existing screen spool file, click **[New File]** this will display a list of your available screen spool files. Select the other report you want to look at, and click **[OK]**.

Split Screen – Click the **[Split]** button to divide the screen in half with the same report. You can then position both halves to view two different areas of the report at the same time. To turn split screen off, click the **[Un-Split]** button.

Switch between the Split Screens – If the screen isn't split, see the Split Screen section above. You can then scroll only the **active screen** report. To get the other half of the screen active, click the **[Switch]** button.

Locking part of the report – Click the **[Lock]** button to lock a portion of the screen horizontally. Locking the screen horizontally allows you to keep certain columns of information on the left side of the screen "frozen". **Example:** You printed a sales analysis report with SKU detail and YTD sales. **[Lock]** would "freeze" the number of columns necessary to keep the SKUs on the screen.

Searching for a number, character or text string – Click the **[Find]** button to bring up the Find window. A new box will appear and say **Find What**. Type in the number (which may be an SKU number), character, or string of text you want to find and click **[OK]**. It will stop and highlight where it finds your request. To start scanning from the beginning of the report, press the **[Home]** key before clicking **[Find]**. Click **[Repeat Last Find]** and it will then find the next occurrence of that text string in the report.

Printing a Report from the Screen – Click the **[Print]** button to display the Print window. A new box will appear and say **Print from page** and **to page**. Enter the number of the pages you want to print (**Print from**

[page 1 to page 999999](#) is the default, and will print the entire report).

Exporting a Report from the Screen to PDF – Click the **[PDE]** button to display the Export to PDF window. A new box appears and lists a **PDF Filename**. By default, the filename is the same name as the report and the directory the PDF file is saved is the same directory as the RICS data path. To default to a different directory, add the following entry to the RICS.CFG:

Section: ScreenSpool

Item: PDFDir

Value: Enter the directory you want the PDF documents saved to in the format "C:\RICSWIN\PDF"

Click **[Export]** or press the **[ALT] + [E]** keys to export the file to PDF.

Run Job List

Runs the Jobs scheduled to Run

Runs the Jobs scheduled in the priority they were listed in Look at Job List. You may **[Pause]** this action, or **Stop running jobs after the current job completes**.

Reminders

Set up Reminders or Appointments

Reminders are an optional feature of **RICS**. Whenever you log into **RICS**, all the current day's Reminders are displayed. Also, if you are logged into **RICS** when an appointment is due, an alarm will ring, and the message for that Reminder will be displayed on the screen.

Entering an Reminder -

Enter your **User** ID, if you do not have User IDs enter in **SUPERVISOR**. If you use passwords, you may enter another user's appointments by entering a different ID number. Appointments entered for different users will be displayed as, "in use by someone else". Only your appointments will be displayed.

Enter in the **Date/Time** you want to be informed of the reminder in the following format **MM**Month/**DD**Day/**YY**Year **HH**Hour:**MM**minutes. Make sure you enter a space after the Year and before the Hour.

Example Dates:

01/01/05 10:00 – Close year

01/31/04 22:00 – Close month (notice military time for 10:00 PM)

Enter a brief description of the reminder in **Subject**, and the **Message**.

You may automatically **Reschedule** the reminder for a later date. Your options are **Don't Reschedule**, **Reschedule in ___ days**, **Reschedule next month**, **Reschedule next year**.

Super Jobs

Super Jobs are many Jobs saved to run together

For a group of Jobs you want to run together, again and again you can save them to create Super Jobs (i.e. Call Stores, Weekly Reports, Close Month).

To create a Super Job, enter in a new **Super Job Name** and press enter. A list of **Available Job Names** will appear on the left and a list of **Saved Selections** for that option will appear on the right. You can scroll the list using the **scroll bar**, **up/down arrow keys**, **Page Up/Down keys**, or **Home/End keys**. Use the mouse or press the **[Tab]** to activate the options on the right.

Highlight the option on the right and select **[Add New Job]** or **[Alt] + [N]** to add to the current Super Job list.

The items in the list will run in their order in the list. You can choose items in the Super Job list to either **[Move Up]**, **[Move Down]**, or **[Remove]** them from the list.

EDI - Electronic Data Interchange

EDI - Electronic Data Interchange (Optional)

Use this option (if purchased) only if you process EDI communications from the main computer. For more information, contact [Technical Support](#).

Process SPS Commerce EDI

Use SPS Commerce to Process your EDI (Optional)

This option is available for purchase. For more information, contact CSI.

Unattended Backup

To make it more convenient to perform backups on a regular basis, create an Unattended Backup.

You can click the **[Add Job and Run]** button to run the Unattended Backup immediately.

You can click the **[Add Job and Continue]** button to add the Unattended Backup as a job to be run later.

The best use would be to enter a **Report Comment** for a *daily backup* with the **Backup Path** set to the path where you do your normal daily backup. Click **Options** on the menu and then click **Save Current Selection** so the daily Unattended Backup can be added to a Super Job.

Backup to CD

To backup to CD you must have a Read/Writeable CD-Rom drive.

Media Choices

CD-R

Advantage:

- Many newer CD burners can write 12 times faster to a CD-R than a CD-RW.
- Can reuse the CD.
- Inexpensive

Disadvantage:

- CD-Recordable discs have a limited life. Once an area on the disc is used, it is cannot be re-written meaning that the number of times a CD-R can be used is limited to how large the backup file is.

CD-RW

Advantage:

- CD Re-Writeable discs can write over an area previously written multiple times. It can also be formatted or erased to clear the CD completely.

Disadvantage:

- More expensive than CD-R discs
- Slow burn speed (typically 4x) resulting in longer burn time

Getting Started

1. From the Utilities 1 screen, click the Backup Data button
2. Place the media (CD-R or CD-RW) in the Writeable CD-drive.
3. Set the **Backup Path** to the drive letter of the CD burner
4. Click the **[Backup]** button
5. When you are backing up to a CD, RICS creates a temporary folder /TEMPBACK under the RICSWIN directory to hold the backup file before writing to CD.
6. Once the backup file is created, it is then written to the CD.
7. Once the backup file is written to the CD, the CD tray will eject (if your CD-Drive supports this).

NOTES:

- Use seven (7) CD's for daily backups, one for each day of the week. DO NOT REUSE THE SAME DISC FOR DAILY BACKUPS EACH DAY.
- You can use the same CD for end of month backups if you check the **End of Month Backup** check box. This places the backup in a directory on the CD with the directory name containing the year and month of the backup. An example would be /2003JAN.
- CD-R's can hold 650MB-700MB. If your backup file is larger than half the disc size, you will only get one use of the disc because a second backup will not fit.
- Do not put anything else on your backup discs. They should strictly be for your backups.

ERRORS:

Some errors you might receive before attempting to write a backup

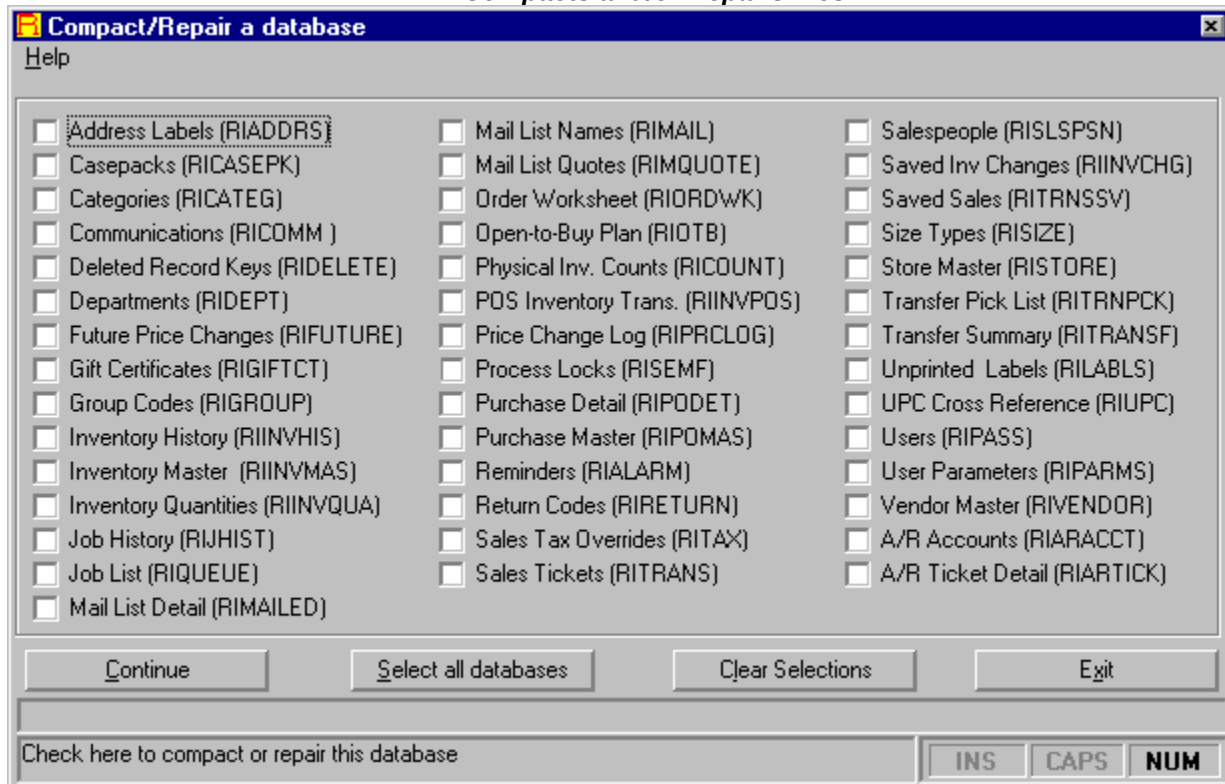

- *IsMediaLoaded() failed. Make sure a disc is in the specified drive.* - There is no disc in the drive, you may have put the disc in the wrong CD-drive, or you put a disc in that is closed. Make sure you have a disc in the drive listed in the error. If you do have a disc in the drive, make sure it is a CD-R or CD-RW. If there is, replace the disc with a new one because that one is closed.
- *Please Insert Disk #2* - The drive you specified is not a valid Read/Writeable CD-Rom. Check the drive letters of your CD-Drives and backup to the Read/Writeable one.

If you have any questions, please contact Technical Support.

UTILITIES 2

Compact/Repair a Database

Compacts and/or Repairs files

Backup all RICS data before using this utility! Listed above are all the data files in RICS and **(their meanings)**. It is possible for data files to become damaged. This program will compact the files and should correct any damaged **RICS** data files, but it cannot always do so depending on the damage to the file. Click on the file(s) to compact, (to select all files click **[Select all databases]**) then click **[Continue]**, when completed you will then be returned to the **Main Menu**.

The most common reason to run the Compact/Repair a Database is error 3343. Make sure you have a backup before running this utility! After running Compact/Repair a Database for the affected database, attempt to re-open the screen that reported the error.

Create/Delete a Database

Deletes the current file and creates a new empty file

Backup all RICS data before using this utility! The screen will list all the data files in RICS and **(their meanings)**. When you create a file, **you lose all existing information** currently in the file. If a file is created that contains a supplemental index, all supplemental indexes in all files will be dropped. Click on the file(s) to delete then click **[Continue]**. When completed, you are returned to the **Main Menu**.

Check Data Integrity

Checks files for possible errors

Backup all RICS data before using this utility! The screen will list all the data files in RICS and **(their**

meanings). This utility will read a file(s) for any possible errors. Click on the file(s) to check then click **[Continue]**. When completed, you are returned to this **same menu, only no files will be checked**. Two common errors will be displayed as:

Record 12345678 (store 1) in file RIINVQUA
has an invalid row [XXX]

In this example, SKU 12345678 for store 1 has history that is inconsistent with the SKU's current size type. A size type has been changed. You should usually delete invalid rows.

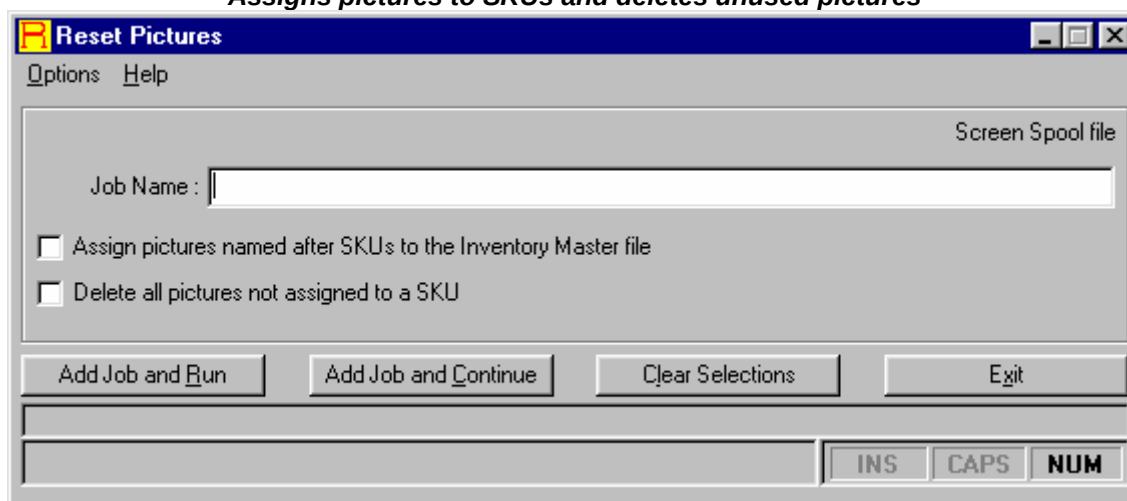

Record 12345678 in file RIINVMAS points to file RICATEG
using key 555 but record doesn't exist

In this example, category 555 has been deleted, but SKU 12345678 still 'belongs' to that category. In this example, DO NOT delete the SKU. Write down the problem and correct it after the checkout is complete.

Four options are available when an error occurs: press **[Esc]** to immediately cancel this utility, press **[Y]** to delete the record, press **[N]** to retain, not delete, the record; or press **[A]** to delete this record and any future records that might be an error for the file.

Reset Pictures

Assigns pictures to SKUs and deletes unused pictures

This job affords the RICS user the ability to automatically assign picture file names to SKUs. In order for a picture file to be assigned the SKU, the picture file exactly must match the SKU and have an extension of '.jpg'.

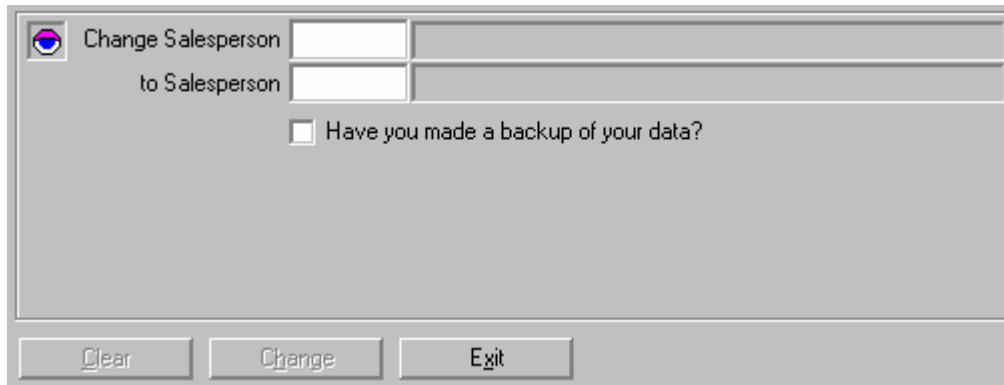

As RICS users delete old SKUs, the picture files still remain on their computer. This job can also optionally delete all picture files in the RICSPICS folder that are not assigned to any SKU.

Change Salespeople

Changes existing salesperson's number or combines into another salesperson

**WARNING: THIS UTILITY COULD TAKE A WHILE TO COMPLETE
DEPENDING ON THE AMOUNT OF DATA YOU HAVE!!!**

Backup all RICS data before using this utility! This utility is used to change a salesperson's number to a different number or to combine this salesperson's information with another salesperson. If combining stores and each store uses the same salesperson numbers, then some of the salesperson numbers will have to change. The only data that doesn't get changed is the mail list purchase detail.

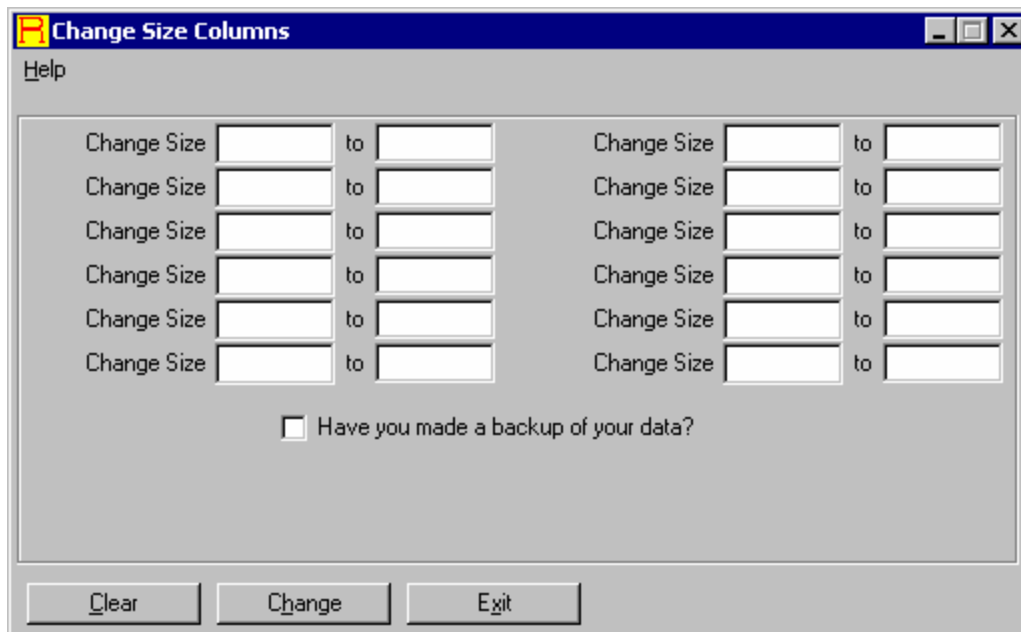

The screenshot shows a Windows-style dialog box titled "Change Salesperson". It has a small icon in the top-left corner. The dialog contains two text input fields: the first is labeled "Change Salesperson" and the second is labeled "to Salesperson". Below these fields is a checkbox labeled "Have you made a backup of your data?". At the bottom of the dialog are three buttons: "Clear", "Change", and "Exit".

Enter the salesperson you want to change in the [Change Salesperson](#) field. Enter the new salesperson in the [to Salesperson](#) field. To save the changes click the **[Change]** button.

Change Size Columns

Changes size column descriptions

Backup all RICS data before using this utility! This utility is used to change columns for every size grid the column exists. For example, if you have a size type with the column description 070 and wanted to change it to 7.5, you would do that here by entering the column description to change from and the new column description to change to.

The image shows a Windows-style dialog box titled "Change Size Columns". It has a blue title bar with a yellow icon on the left and standard minimize, maximize, and close buttons on the right. Below the title bar is a "Help" button. The main area of the dialog contains two columns of input fields. Each column has six rows, each starting with the text "Change Size" followed by a text box, then the word "to", and another text box. Below these input fields is a checkbox labeled "Have you made a backup of your data?". At the bottom of the dialog are three buttons: "Clear", "Change", and "Exit".

Change Size		to	
Change Size		to	
Change Size		to	
Change Size		to	
Change Size		to	
Change Size		to	

☐ Have you made a backup of your data?

Clear Change Exit

Enter the size type you want to change. Enter the size column description to change in the **Change Size** field. Enter the new size column description in the **to** field. To save the changes click the **[Change]** button.

Change Size Types

Changes existing size grids

Backup all RICS data before using this utility! This utility is used to change a size grid. For example, you can add, move, and delete columns and rows on a size grid.

Size Type to change

☒ Have you made a backup of your data?

Current Size Columns

065	070	075	080	085	090	095	100	105	110	115	120	130	140	150			

New Size Columns

060	065	070	075	080	085	090	095	100	105	110	115	120	130	140			

Current Size Rows

N			
M			
W			
WWW			

New Size Rows

S			
M			
W			

Enter the size type you want to change. Enter the changes you want to make in the [New Size Column](#) or [New Size Row](#) information fields. **[Copy Rows]** and **[Copy Columns]** buttons will copy the [Current Size Column/Row](#) information to the [New Size Column/Row](#) information fields. To have the changes click the **[Change]** button, the following screen appears:

Size Type to change

☒ Have you made a backup of your data?

<u>These Columns will be added</u>	<u>These Columns will be removed</u>
060	150

<u>These Rows will be added</u>	<u>These Rows will be removed</u>
S	N WW

All data from any removed columns will be placed in the first size column (060).
All data from any removed rows will be placed in the first size row (S).

Check the information in **Columns/Rows- added/removed** to make such the information is correct.

Click **[OK to Change]** to have changes take effect.

NOTE: All data from any removed columns will be placed in the first size column (In this example all information for Size 150 would then show up in the Size 060 fields). **All data from any removed rows will be placed in the first size row** (In this example all information for Rows N, WW would then show up in the Row S fields).

Change Categories

Renumbers the category #s for SKUs to a new category and deletes the old category

Backup all RICS data before using this utility! This utility will renumber SKUs in one category # with a different category # and then deletes the old category. Enter the **Change Category** number and the **to Category** number. Click the **[Change]** button to have these changes take effect. The program will inform you when it has completed the change.

Change Vendors

Changes Vendor #s for all SKUs from one Vendor to another

Backup all RICS data before using this utility! This utility will change Vendor name for all SKUs using that Vendor, replaces it with a new Vendor and then deletes the old Vendor. Enter the **Change Vendor** number and the **to Vendor** number. Click the **[Change]** button to have these changes take effect. The program will inform you when it has completed the change and how many SKUs it changed.

Change Seasons

Changes the Season #s for all SKUs from one Season to another

Backup all RICS data before using this utility! This utility will change the Season for all SKUs using that Season, replaces it with a new Season and then deletes the old Season description. Enter the **Change Season** number and the **to Season** number. Click the **[Change]** button to have these changes take effect. The program will inform you when it has completed the change and how many SKUs it changed.

Change Group Codes

Changes the Group Code for selected SKUs

Backup all RICS data before using this utility! This utility will change the Group Code for all SKUs based

on the criteria that you select.

Enter the **New Group Code** number and the criteria. Click the **[Change]** button to have these changes take effect. The program will inform you when it has completed the change and how many SKUs were changed. You also have the option to **Only change SKUs with future price changes**. When this option is un-checked it will change all SKUs that match the criteria. When it is checked it will only change SKUs that have a future price change.

Change Keywords

Add/Remove a Keyword for selected SKUs

Backup all RICS data before using this utility! This utility will change a Keyword for all SKUs based on the criteria that you select.

The screenshot shows a Windows-style dialog box titled "Change Keywords". It features a "Help" button in the top-left corner. The main area contains a "Keyword" text input field, followed by two radio buttons: "Add Keyword" (which is selected) and "Remove Keyword". Below these are seven criteria text input fields, each preceded by a small icon: "SKUs", "Categories", "Vendors", "Seasons", "Styles/Colors", "Groups", and "Keywords". At the bottom of the main area are three checkboxes: "Only change SKUs with future price changes", "Only change SKUs with Week-to-Date sales", and "Have you made a backup of your data?". The bottom of the dialog has three buttons: "Clear", "Change", and "Exit". A status bar at the very bottom of the window shows "INS", "CAPS", and "NUM" indicators.

Enter the **New Keyword** and the criteria. Select the **Add Keyword** (default) or **Remove Keyword** option. Click the **[Change]** button to have these changes take effect. The program will inform you when it has completed the change and how many SKUs were changed.

You also have the option to **Only change SKUs with future price changes**. When this option is un-checked it will change all SKUs that match the criteria, when it is checked it will only change SKUs that match the criteria and have a future price change.

Another option is to **Only change SKUs with Week-to-Date sales**. When this option is checked, SKUs that match the criteria and have Week-to-Date sales are affected.

Test Modem

To test or Reset the Modem setup for communications

[Find Port] finds the communications port where your modem is located.

Modem to Reset ___ is the number of the communication port you want to reset.

[Reset Specified Modem] resets the specified modem to factory configurations.

Do not run this function without first contacting Technical Support. This function allows you to change the configuration of your RICS system for certain values or options without having to receive and install new software or updates. You simply select the Section and Item from the list boxes and type in the entry that you received from *Technical Support*. If you need to add a section or item that does not exist, simply check the appropriate box and add the section or item in the supplied entry field.

Frequent Buyer Plan

What is the Frequent Buyer Plan?

RICS can optionally track customer purchases and automatically award product discounts after a minimum purchase requirement has been met. The frequent buyer plan can be configured to award discounts based on total number of items purchased, total dollar amount purchased, or a fixed discount on every eligible purchase. Below is a description of each method.

Method 1: A customer would buy **X** quantity and receive **N** percent of the average value of those **X** items on their next purchase. That means, you tell **RICS** what quantity the customer needs to purchase to receive a discount, and what percentage of the average that discount should be.

For example, your plan is for the customer to buy 6 and get 50% of the average value of those 6 items as a credit on the 7th item. If the customer had six purchases of the following amounts: **\$50.00, \$65.00, \$60.00, \$70.00, \$62.00, \$67.00**, they would receive a discount of **\$31.17** discount on their seventh purchase. That discount represents 50% of the average value of the previous six purchases.

Method 2: A customer would purchase **X** total dollars and receive **N** dollars off on their next purchase. That means, you tell **RICS** what dollar amount the customer needs to purchase to receive a discount, and what dollar amount that discount should be.

For example, your plan is for the customer to buy \$500.00 and receive a \$50.00 discount on their next purchase. If the customer had purchases of the following amounts: **\$85.00, \$93.50, \$45.00, \$104.50, \$92.75, \$85.00** for a total of **\$505.75**, they would receive a **\$50.00** discount on their next purchase.

Method 3: A customer earns a fixed discount percentage on every purchase. For example, the customer receives a 3% discount on every purchase. For Example, if the customer has a purchase of **\$50.00**, they would receive a **\$1.50**.

Method 4: A customer would buy **X** quantity and receive **N** percent on their next purchase. That means, you tell **RICS** what quantity the customer needs to purchase to receive a discount, and what percentage the discount should be.

Method 5: A customer would purchase **X** total dollars and receive **N** percent on their next purchase. That means, you tell **RICS** what dollar amount the customer needs to purchase to receive a discount, and what percentage the discount should be.

For example, your plan is for the customer to buy 6 and get 50% off the 7th item. If the 7th item is **\$50.00** they would receive \$25.00 discount.

Other Frequent Buyer information

Phase from one plan to another

You can transition a customer from one Frequent Buyer Plan to another. For example, you are discontinuing a plan where the customer buys 12, and gets 100% of the average value of those 12 items as a discount on their 13th purchase. You decide the new plan is buy 5 and get 50% of the average value of those 5 as a discount on their 6th purchase. If chosen, after the customer has been awarded a discount on the old plan, **RICS** will automatically put them on the new plan.

Change Frequent Buyer Plan

Setup or change your Frequent Buyer Plan

In **RICS** you must create your Frequent Buyer credit and discount SKUs. You may also want to create a separate category and vendor for those SKUs. For example, you could create a vendor called **Frequent Buyer**, with a vendor number of **FREQ** and category **990, Frequent Buyer**. You DO NOT want to assign those SKUs a size type number. Recommended SKU numbers are **FB/DISC** and **FB/CREDIT**.

Frequent Buyer Plan Enabled - When checked, the Plan is turned on.

Number of Plans - You may choose up to 5 different plans.

Default Plan – select the Plan Number that is the default. This plan number would then be automatically entered when you add a new customer. If you only have 1 plan enter a 1. If you do not want a default plan, then leave this field blank.

Modify Plan # - the Plan Number you are working on.

Calculation Method - choose 1 through 5. The methods are defined in What is Frequent Buyer Plan.

Break Point -If using Calculation Method #1 or 4, then this would be the number of pairs (or items) needed to be purchased to receive the discount. If using Calculation Method #2, #3 or #5, then this would be the \$ amount needed to be purchased to receive the discount.

Discount -If using Calculation Method #1, #3, #4, or #5 then this is a %. If using Calculation Method #2 this is a \$ amount.

New Plan - After the break point has been satisfied, you may have the customer changed to a new plan. If you have another plan that should take effect at that point, enter the appropriate plan #. If you only have one plan, this would be 1.

Credit SKU - Enter the SKU # that you set up in RICS for frequent buyer credits. CSI recommends [FB/CREDIT](#)

Discount SKU - Enter the SKU # that you set up in RICS for frequent buyer discounts. CSI recommends [FB/DISC](#)

Accum Categories - You can select only those SKUs from certain categories to be eligible towards frequent buyer purchases and discounts. For example, you may not want polishes, creams, laces, or other accessories to count as eligible frequent buyer purchases. Categories can be entered as a range using a dash, or individually using commas. If everything is eligible then leave this blank.

No Qty. Categories - This would be used if you are using SKU #'s for discounts or coupons, and you don't want the discount/coupon quantity added to their purchase quantity, but you still want the discount/coupon amount subtracted from the purchase amount in their plan.

Allow Negative Counts - Leave this Checked On, unless instructed by CSI to do something differently

Discount Full Price Only – when checked, select only those SKUs that are sold at full price (or above) to be eligible towards frequent buyer purchases and discounts. For example, you may not want discount or clearance merchandise to count as eligible frequent buyer purchases.

Retain Partial Credit - **RICS** can keep track of unused credit after a discount. You would have unused credit if the discount were greater than the current purchase.

Credit Categories Only - when checked, if the customer is to receive a credit/discount, only SKUs in the **Accum Categories** are eligible for the credit/discount. If unchecked, the SKU could be from any category.

Points Factor - For Calculation Methods #2 and #5, the customer can optionally see their dollars purchased as 'points'. The Points Factor will be divided by the Dollars Purchased to arrive at the customers 'Points'. For example a customer with \$459.78 in Frequent Buyer Dollars purchased would have 9 points if the Points Factor is 50, but 45,978 points if the Points Factor is set to .01.

After the Plan is Setup: All of these changes also need to be done at each POS computer. We recommend that you copy this file to the POS computer(s). The Frequent Buyer Plan information will be copied when you include the Inventory master file in Backup File for POS or send SKU and Store Changes to the POS via Calling the POS Registers or Polling the Registers via the Internet.

Using the Frequent Buyer Plan

Using the Frequent Buyer Plan

You will add new account numbers in **RICS** as you normally would. The **Plan Number** will be filled in for you automatically if you specified a "default plan number" when you set up the frequent buyer plan. Otherwise, your salespeople will have to type in the plan number. **Qty Purchased** and **\$\$\$ Purchased** will increment with each purchase. They CANNOT be manually changed at the POS computer. **RICS** will display the **Qty Purchased** and **Dollars Purchased** (depending on plan #) and the **Estimated Discount**. The **Quantity** and **Est Disc** is highlighted (and possibly blink) to alert the salesperson that the customer has reached their purchase limit.

After the customer has reached his/her purchase limit and makes their next purchase, a message similar to the following will be displayed:

Note: (37)

JOHNSON, MARY is now eligible for a
Frequent Buyer Discount of
\$29.99. Apply discount now?
Press Y or N

Press **[Y]**. **RICS** will apply the frequent buyer discount on that purchase.

The frequent buyer SKU will print as a negative one quantity with the price being the amount of the discount. The customer's quantity purchased is then decreased by the amount of the break point. This usually means the quantity purchased is reset to zero.

The balance of their frequent buyer will also print at the bottom of each ticket. If you prefer this balance to not print, contact Customer Support.

Existing Customers FBP

Frequent Buyer- Existing Customers

If you currently track a similar frequent buyer plan manually, it may be necessary to transfer those balances (purchases) into **RICS**. Staff at the Main or POS computers can put existing customer balances on the computer. To enter Frequent Buyer information click on **Freq Buyer Input** from the Run Other Utilities program.

INS CAPS NUM

Entering existing customer purchases:

1. Type in the customer's account number and press **[Enter]**. The default plan number will fill in automatically. The cursor will be at the first quantity field. Type in the quantity and price of those items the customer has purchased that apply towards their current frequent buyer plan. (**NOTE:** DO NOT type in any item that does NOT count towards their current frequent buyer plan.)
2. After the current purchases are entered, click **[Save]** to save the information. A total quantity and dollar amount will be displayed at the bottom of the screen. You will be prompted to press **[Enter]**. You will then be able to enter a different account and their purchases.

At the POS if you need to enter sales while in the middle of entering existing customers in to the frequent buyer plan you can. After you are done entering sales, you can then resume where you left off. All previously entered information will not be lost.

Print - This will print out those customers and purchases that have been entered and not yet copied to a disk. It will print on a 40 Column receipt printer.

When you are finished entering all existing frequent buyer plan entries, that information is then copied to a diskette and sent to the main computer. Use a blank disk to copy this information. DO NOT use the same diskette that is used to transfer sales. To copy the information press:

Copy to Disk - Enter the drive containing the disk and press **[Enter]**.

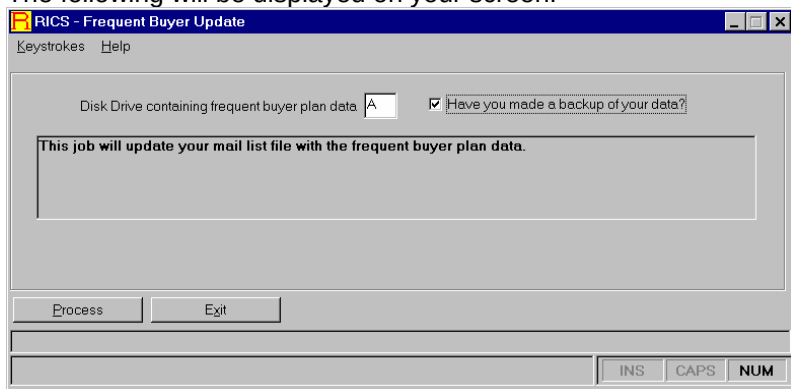

The diskette can then be taken to the main computer. On the main computer do a backup of your data. Backup Data then run the Freq Buy Update program.

Frequent Buyer Update

Updates your Frequent Buyer Input

If you want to update the computer with the frequent buyer balances click on **Freq Buyer Update** from the Run Other Utilities program.

The following will be displayed on your screen:

Enter the disk drive you are updating from:

Make sure you have run Backup Data before you **[Process]** these updates.

If this option was run at a POS computer, do not forget to process the diskette at the main computer. Your mail list will then be updated with frequent buyer information at both the main and POS computers.

IMPORTANT: After you finish processing the frequent buyer diskette at the main computer, set the diskette aside. It is very important that you do not process that diskette again. The information on the diskette is not erased after it is processed. If you process the diskette again, you will double the purchases of each customer.

Refunds with F B P

Doing Returns when using the Frequent Buyer Plan

When a customer returns an item that counts towards a frequent buyer discount, their quantity purchased is decreased and the estimated discount is recalculated.

If the customer were to return an item after they have received a discount, you have two choices:

- 1) Return the item at regular price, but disregard the discount they received. The quantity purchased would then be a negative one. The customer would have to purchase an additional item to offset the return to reach their next discount level.
- 2) Return the item, taking into account the discount they received. To do this, return the item they purchased at full price. Next, sell the SKU used for the frequent buyer discounts for the amount of the discount. Below is an example of how this would print on the customer's receipt.

```
-1 2632 105 M ROCKSPORT TI 84.97-  
1 FB/DISC FREQ. BUYER 49.97
```

RICS will adjust the quantity purchased and the estimated discount as it was before the customer received a discount. The customer would then be eligible to receive the discount again on their next purchase.

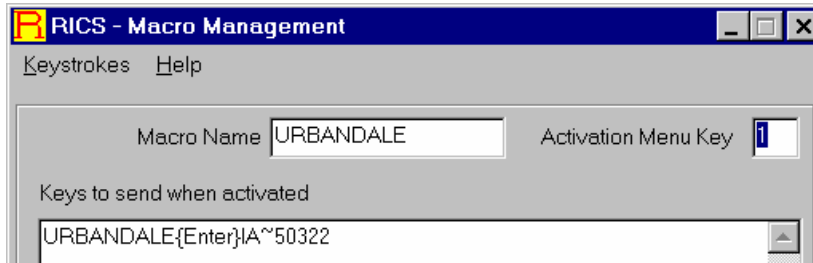

Macro Management

Macros are used to automate typing

A macro is a single keystroke that represents a series of keystrokes. The best time to use a macro is when

the same information is typed continually. Whenever a macro is run--by pressing a special key combination--the series of keystrokes is automatically "played back". A single keystroke, or macro, could then be used fill in that information automatically.

Up to nine macros can be defined, with a descriptive name for each. When a macro is "played back", each keystroke in the macro is executed in turn, starting at the cursor's location. Make sure you start the macro at the same location every time.

To create a Macro: enter a **Macro Name** and an **Activation Menu Key** (must be a number between 1 and 9) then enter **Keys to send when activated** and **[Save]**.

To enter to the next field on screen in a macro you must put **[{Enter}]** (the word **Enter** within **{ }** braces) or **[~]** (**[Shift]** + **[~]** - the key above the **[Tab]** key) to represent the enter keystroke.

In the above example this Macro was setup for a City, State, and Zip Code in the mail list.

Other Keys:

Down Arrow	{Down}
Left Arrow	{Left}
Right Arrow	{Right}
Up Arrow	{Up}
Tab	{Tab}
ALT	%
SHIFT	+
CTRL	^

{bmc keystrokes.bmp}

When a macro has been created an option called **Keystrokes** will appear on the top line.

To Display a List or Run a Macro: Click on **Keystrokes** and select from the list of Macros or press **[Alt] + [K]** to display the list of Macros and then the **[#]** number of the Macro.

Use this option (if allowed) to export your RICS inventory data to the RMSA program in the format that is required by RMSA. For more information, contact Technical Support.

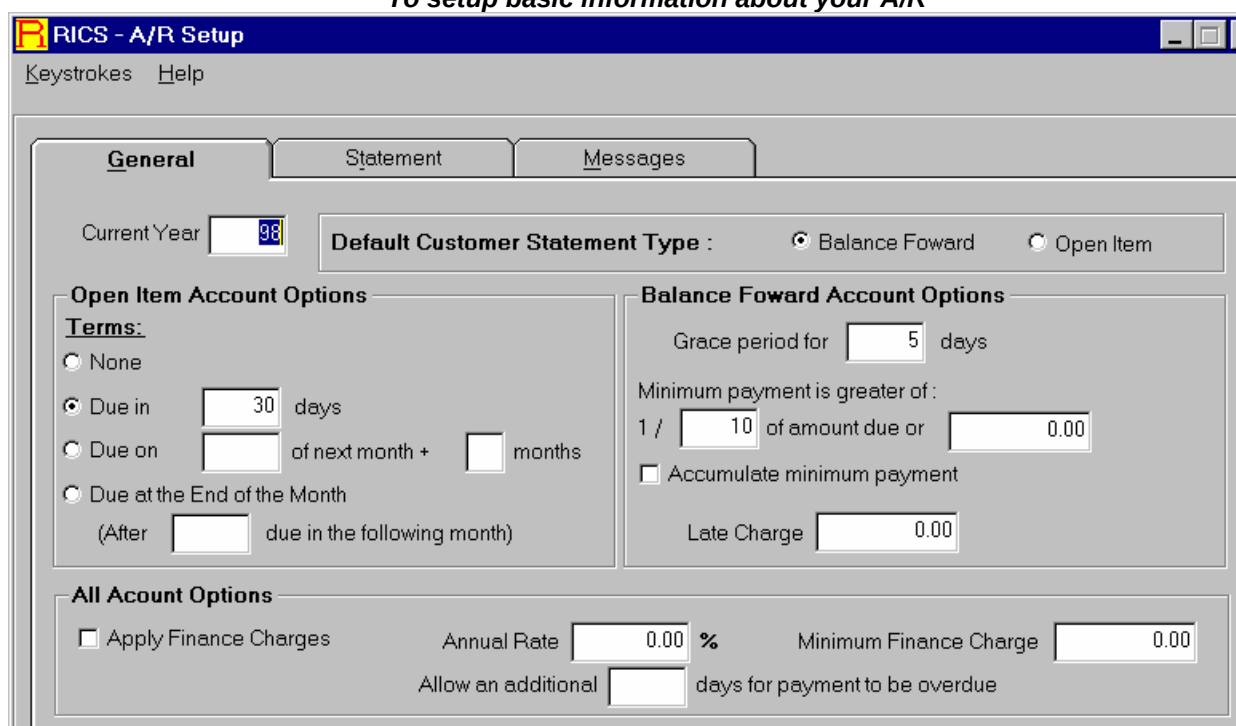

ACCOUNTS RECEIVABLE

Overview

The RICS Accounts Receivable software (if purchased) is a totally integrated module with the RICS Point-of-Sale. New customers, house charges, and charge payments can be entered and automatically posted to A/R. The A/R system contains all the necessary reports and display screens to completely track your A/R balances for both Balance Forward accounts for individuals and Open Item accounts for commercial customers. Send customer statements, add finance charges, or setup minimum payments are some of the many features in this software.

A/R Setup

To setup basic information about your A/R

The screenshot shows the 'RICS - A/R Setup' window with three tabs: 'General', 'Statement', and 'Messages'. The 'General' tab is selected. It contains the following fields and options:

- Current Year:** A text box containing '98'.
- Default Customer Statement Type:** Two radio buttons: 'Balance Forward' (selected) and 'Open Item'.
- Open Item Account Options:**
 - Terms:** Three radio buttons: 'None', 'Due in' (selected), and 'Due on'.
 - Due in:** A text box containing '30' followed by 'days'.
 - Due on:** A text box followed by 'of next month +' and another text box followed by 'months'.
 - Due at the End of the Month:** A radio button.
 - (After):** A text box followed by 'due in the following month'.
- Balance Forward Account Options:**
 - Grace period for:** A text box containing '5' followed by 'days'.
 - Minimum payment is greater of:** '1 /' followed by a text box containing '10' followed by 'of amount due or' followed by a text box containing '0.00'.
 - Accumulate minimum payment:** An unchecked checkbox.
 - Late Charge:** A text box containing '0.00'.
- All Account Options:**
 - Apply Finance Charges:** An unchecked checkbox.
 - Annual Rate:** A text box containing '0.00' followed by '%'.
 - Minimum Finance Charge:** A text box containing '0.00'.
 - Allow an additional:** A text box followed by 'days for payment to be overdue'.

There are three folders in the A/R Setup. Information must be completed on all three folders for the statements to print correctly.

General:

Enter the **Current Year** that you began using the Accounts Receivable Module. This year should not be changed manually at the end of the calendar year. Instead, you must run menu option Roll Over A/R Current Year and the current year shown on this screen will update to the new year.

Open Item Account Options - Enter your **Terms**. The statements for this type of account will always list each open invoice regardless of its age. This statement is usually used for commercial or business accounts that pay by invoice. In other words, each payment received on this statement type must be entered on the main computer and payments are applied to individual invoices.

Balance Forward Account Options - The statements for this type of account will print the Balance Forward amount from the last statement and then list all new charges, adjustments, and payments from that time with the total due. This is similar to most regular credit card statements you receive and most individual (non-

commercial) accounts will use this method. Payments can be entered on the main computer or the POS computer and will always automatically apply to the oldest balance due.

Grace period for ___ days - used to establish the due date for Balance Forward accounts. For example, if statements are printed on the last day of the month and payment is due by the 20th of the next month, enter 20 for the grace period.

Minimum Payment - If there is an amount due to print on the statement, enter the fraction of the total balance due that you want for the minimum calculation. If you do not want a minimum payment to print on the statement, then enter 1/1 for the minimum.

Accumulate minimum payment - If the minimum payment was not made for the prior month that month's minimum payment balance will be added to this month's minimum payment.

Late Charge - If payment is made after grace period this amount is added to the balance due.

All Account Options - Finance Charges are calculated using the average daily balance method.

Open Item Accounts - the finance charge is calculated if full payment is not received on individual invoices within the terms described above.

Balance Forward Accounts - the finance charge is computed on the average daily balance since the last statement date if payment in full for the statement balance is not received (less any credit adjustments) by the number of grace period days described above.

Apply Finance Charges - Check on to apply, and enter the **Annual Rate ___ %** and the **Minimum Finance Charge ___**.

Allow an additional ___ days for the payment to be overdue allows each account (both Open Item and Balance Forward) to have an additional number of days to receive payment before a finance charge is calculated. Some users allow an additional 4 or 5 days for a payment mailed to be received. The aging is still based on the date due before these additional days are added.

Statement:

Statement Address - should be entered for your store name and address you want to print at the top of the statements. **If you are using pre printed forms, leave this blank.**

PREPRINTED FORMS: If you are interested in using pre-printed forms with your name and/or logo on them contact, Moore Business Forms at 1-800-323-6230 to order 1-part form # 17889 or a 2-part form # 17897.

ENVELOPES: To use double window envelopes for pre-printed or plain paper forms order # K15438.

Statement Detail - refers to how much detail you want to print on the statements. The least detail, but probably the most common option, is **Ticket Totals**. Choosing any of the other three options will include more detail to display to the customer individual departments, categories or SKUs that were purchased.

Messages:

Statement Messages - allows each user to enter their own wording to print on their statements for payments and dunning notices. The oldest balance due for each customer will determine which dunning notice will print at the bottom of their statement.

Message to print at the end of each statement - allows each user to enter a message that will appear at the end of each statement. This could be used to tell customers about upcoming events.

Enter Customers in A/R

Enter Customers for A/R Accounts

Account # - Enter the new account number (account number must be already in **RICS Mail List**, or you can Lookup the customer's name. Their name and address will appear along with other account information. New accounts can also be added at the POS computer for accounts using the default statement type.

Statement Type - Check either *Balance Forward* or *Open Item* option. The terms for any account can be changed at a later date.

Apply Finance Charge - Check on to calculate finance charges. This can be changed for individual accounts.

Enter A/R Payments

Enter A/R Payments at the Main Computer

Batch Date is the date the payments are to be posted, even if it is a different than today's date. To change the batch date click **[Change Batch Date]** or **[Alt] + [B]**.

Account # - Enter the account number or Lookup the customer's name. Their name and address will appear along with other account information.

Reference # - is a required field. Generally, the customer's check # is entered in this field. After a payment has been entered and saved, you can enter a corrected payment by entering the previously used Reference #. The system will assign a different **Sequence #** for each correction. You can also re-apply the payment to different outstanding invoices by re-entering the previously used Reference #.

New Payment on balance forward accounts will automatically apply to the oldest balance. Payments on open item accounts must be applied to specific invoices and the system will not allow you to save the payment until it is fully applied.

[Reverse] or **[Alt] + [R]** - reverses a previous selected payment when the Reference # is entered.

[Auto Apply] or **[Alt] + [A]** - applies the payment(s) to the oldest open item ticket still open. If there are many open invoices, it may be faster to press **[Auto Apply]** then override those invoice payments that are incorrect.

[Detail] or **[Alt] + [D]** - shows the ticket detail for the account entered. The detail screen has the following options:

- **[Ticket Summary]** or **[Alt] + [T]** - shows the ticket summary for the account entered.
- **[Ticket Detail]** or **[Alt] + [I]** - shows the ticket detail for the account entered.
- **[Payment Summary]** or **[Alt] + [P]** - shows the payment summary for the account entered.
- **[Payment Detail]** or **[Alt] + [A]** - shows the payment detail for the account entered.

Enter A/R Adjustments

Enter A/R Adjustments or Beginning Balances

Batch Date is the date the adjustments are to be posted, even if it is a different than today's date. To change the batch date click **[Change Batch Date]** or **[Alt] + [B]**.

Account # - Enter the account number or you can Lookup the customer's name. Their name and address will appear along with other account information.

Enter any account adjustments by entering in a **Description** and the **Amount**. The amount can be either positive or negative. If printing ticket totals on the statement, only the description on the first line above and the total adjustment will print on the statement.

Entering Beginning Balances:

You will also use this screen to enter your beginning balances when implementing Accounts Receivable.

- *Balance Forward* accounts will be entered with a description of BALANCE FORWARD and the current amount due.
- *Open Item* accounts will be initially entered by inputting each open invoice. If you enter several open invoices on the same screen and you are printing ticket totals only on the statements, only the description from the first line and the total adjustment amount will print on the statement. Therefore, if you want each invoice listed individually on the statement, enter only one open invoice per adjustment screen and **[Save]**. Generally you would enter the invoice number as the description.

[Detail] or **[Alt] + [D]** shows the ticket detail for the account entered. In the detail screen you will also have the option to select:

- **[Ticket Summary]** or **[Alt] + [T]** shows the ticket summary for the account entered.
- **[Ticket Detail]** or **[Alt] + [I]** shows the ticket detail for the account entered.
- **[Payment Summary]** or **[Alt] + [P]** shows the payment summary for the account entered.
- **[Payment Detail]** or **[Alt] + [A]** shows the payment detail for the account entered.

Print Aged Trial Balance

List of Aged Trial Balances

Aging dates in days is the number of days to increment for aging. Thirty day increments are most common.

Include Accounts with Balance Forward Statements - Check on or off.

Include Accounts with open Item Statements - Check on or off.

Include customers with no aging when unchecked omits customers with -0- balances. However, it does include customers with an open invoice and an offsetting open credit, even if the total balance is zero.

Sort Report by: Option for Account#, Name or Current Balance

Print A/R Detail

Prints A/R activity detail

List Activity you can choose to **Print Activity from Last Statement**, or **Print Activity from** a selected date range. If you choose to list activity from last statement date, *Open Item* accounts will still print all open invoices regardless of invoice date.

Include Accounts with Balance Forward Statements - Check on or off.

Include Accounts with open Item Statements - Check on or off.

Print A/R General Information when checked includes information such as YTD charges and payments, date added to A/R and dates and amounts for last payment and last statement.

Sort Report by: Option for Account# or Name

Report Detail: Option to print ticket totals, department detail, category detail, or SKU detail

Print A/R Transaction Summary

Prints a Summary of All A/R Transactions

Select this option by entering the date range to include for the total activity summary. This report will include total charges, adjustments, payments, and finance charges.

Print Activity from – enter a date range.

Include Accounts with Balance Forward Statements - Check on or off.

Include Accounts with open Item Statements - Check on or off.

Print A/R Statements

Prints A/R Customer Statements

It is very important to make a current backup of your data before running statements because the A/R files are being updated during this process. If your power goes off during statements, you would need to restore data from the backup before running statements again.

Balance Forward accounts are updated with a new BALANCE FORWARD while printing statements. Also finance charges are calculated for *Balance Forward* and *Open Item* accounts while printing statements. Therefore, it is mandatory that statements are printed each month.

You can print a preview statement at any time during the middle of the month for a selected account. It will not update the new BALANCE FORWARD for *Balance Forward* accounts nor compute finance charges for any accounts. Their normal statement will print again at month end.

Because some users may experience a printer problem while printing statements, the system includes a feature to automatically create a screen spool file, even if you are normally printing directly to a printer as set up in *Printer Setup*. That way, if you have printer problems during statements, instead of restoring data from the backup you can go to *Look at Screen Spool Files* and simply print the statements again.

Date Statements - is the date to print on the statement.

Print Statements For: You have one of four choices-

Only Balance Forward Accounts

Only Open Item Accounts

All Accounts

One Account with no updates

Have you made a backup of your data? You must make a current backup of your data before running statements.

Purge A/R Detail

Deletes Closed A/R Activity

This option will purge (delete) the A/R detail for all closed activity from the entered date and earlier. The system will keep A/R invoice detail history in the file even though the invoices have already been paid. Retaining this detail allows the user to run *Print A/R Detail* for a selected date range and print the detail for as far back as you want to keep it. You can also review this detail on the screen for selected accounts by pressing **[Detail]** from *A/R - Enter Customer*, *Enter Payments*, or *Enter Adjustments*.

It is up to each user to determine when they want to clear the old detail from the system. Some users may keep the last year's history and others may retain only the last several months. The paid or closed invoices will not continue to print on Open Item Statements nor display on the Apply Payments screen once the -0- balance invoice has printed on a statement.

Purge closed detail dated up to enter the date you want detail delete before.

Have you made a backup of your data?

You must make a current backup of your data before deleting A/R detail.

Roll Over A/R Current Year

Changes A/R Account year

This option will change the A/R current year to the next year and clear all YTD customer totals and reset the totals for YTD to \$ 0. **NOTE:** You must run this option before posting A/R sales to a new year.

Have you made a backup of your data? You must make a current backup of your data before rolling over A/R Current Year

COMPANY SETUP

Company Setup

Information on your company preferences

Enter the **Year-ending Month** for which your calendar year ends. The system will then know when to zero out the yearly sales figures during the month/season/year end close. This month does not have to match your accounting or tax year end. It could be your merchandising year end.

Enter both the **Current month** and **Current year**. You can only post sales for the current month. When you run the Close Month/Season/Year, the current month (season and year, if necessary) will be incremented. (You can, however, enter sales for any month.)

Click on each month in **Season Ending Months** that is the end of a season for your company. At the end of a season, when you run Close Month/Season/Year this will zero out the season-to-date sales figures.

You can have **RICS Automatically Generate Labels** (or hang tags or jewelry tags) for each SKU, either **After orders** (POs), or **After receipts** (PO or manual) are entered.

You can optionally have RICS **Print retail price on Purchase Orders** and/or **Print cost on Purchase Orders**.

Sort SKUs on reports by: can be indexed either by the **SKU#**, by the **Vendor SKU#**, or by **SKU description**. Because the SKU# is 15 characters, and the Vendor SKU#, or SKU Description is 20 characters, indexing by SKU# is faster and consumes less disk space.

Price to print on manual transfers journal: You may choose either **Retail price**, **Average cost**, or **Neither** to print on the manual transfer journal.

Open-To-Buy entry Method: **Use % of total store sales and fixed monthly percentages** - this option is used by new stores that have no sales, or who want to set up their own sales plan.

Use % change over last years sales for each category - use this plan if you have history in the system, and want to do just % change over last years sales.

You can optionally **Save posted sales transactions** information when posting sales. Now, when printing the Special Orders, Layaways, House pymt/chgs, Sales Person Summary or Sales by Time reports, you can print either from unposted transactions or from previously posted information. This option should be checked on.

You can add a user-defined Sales Transaction Type 2. Use this to track sales by store and salesperson.

Sales Transaction Type 2 Description

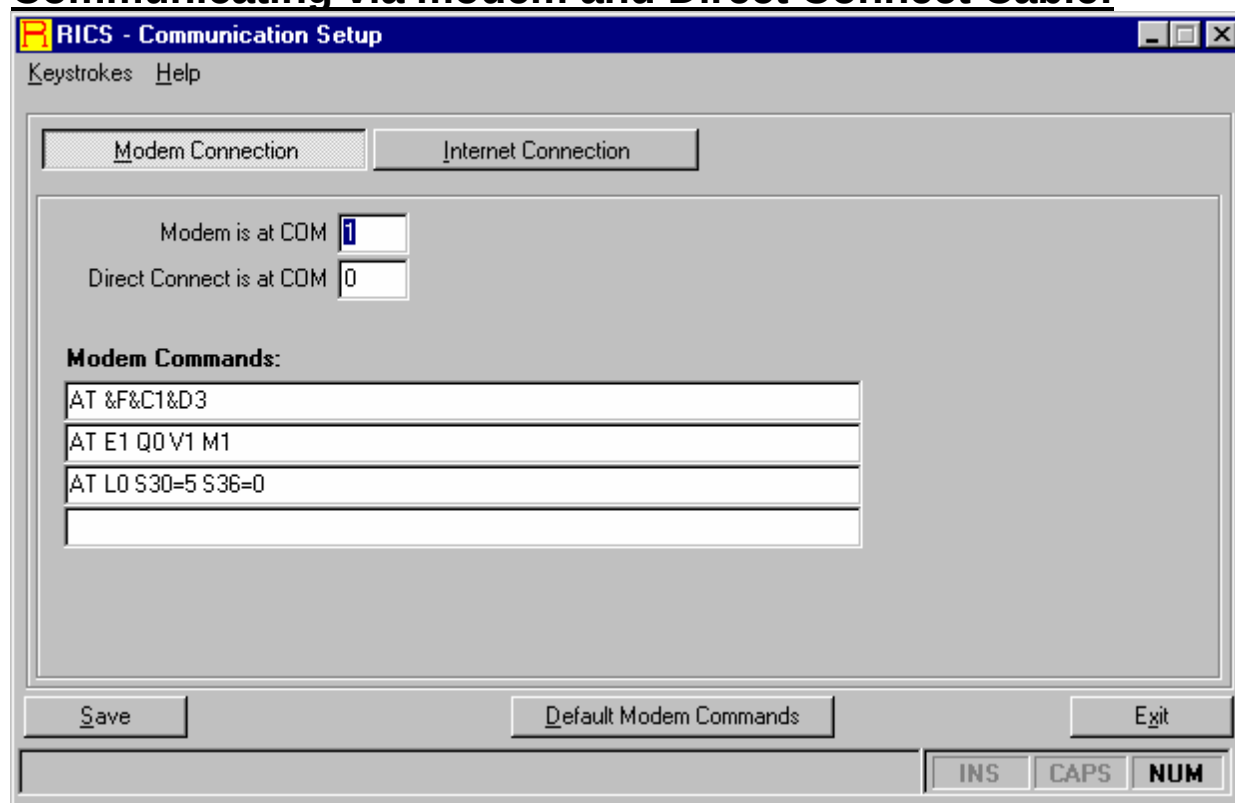

Communication Setup

Setup how you communicate with your stores or main office

There are 4 ways to communicate RICS data with computers. One way is by exchanging sales and backup diskettes between the MAIN and POS computers. The other 3 ways are by modem, a direct connect cable, and via the Internet.

Communications setup: Before communicating with a POS register, you will need to setup the register in **File Setup - Communications**. For a list of registers setup for communications see Print Communications File.

Communicating via modem and Direct Connect Cable:

To communicate by modem:

You will need to tell RICS what communications port (COM port) your modem is located at. **CSI strongly recommends a Hayes, U.S. Robotics, or Zoom external (outside the computer) modem for communications.** If you are having communications issues and using an internal modem, CSI support staff will require you to purchase an external modem. This is because the quality and reliability of the external modems is higher than the internal modems. These modems are designed for direct computer-to-computer connections and are it is easier for CSI to help you with any problems you encounter when you use these modems.

Modems also need certain commands issued to setup the process of dialing, sending data, and receiving data. These commands can be different for different modems. A default set of modem commands may be entered by pressing the **[Default Modem Commands]** button.

To communicate by direct connect cable:

You will need to tell RICS what communications port (COM port) your direct connect cable located at. A direct connect cable connects 2 computers and allows the computers to exchange data over the cable. When you communicate via direct connect cable, the Communications record for the register should have a phone number of **'DIRECT'** and the registers Communicate with Main screen should answer on ring **'D'**

Communicating via Internet:

In order to communicate via the Internet, you first need to tell RICS how you will be using the Internet to communicate your data:

- **None** - Use this option when you don't have an Internet connection to use with RICS
- **Have RICS Connect** - Use this option if you want RICS to attempt to connect to your Internet Service Provider (ISP) when starting communications and disconnect when done communicating. This option

will require you to fill in the fields **ISP UserID**, **ISP Password**, and **ISP Phone Number**. These are the parameters that RICS will need to connect to your ISP. To have RICS connect, you must have a Dial-Up Network Connection that can be accessed by windows. Not all Internet Service Providers offer this feature, preferring instead to control the connection via proprietary software.

- **Don't have RICS Connect** - Use this option when you have a 24/7 Internet Connection (DSL/Cable) or must establish the Internet connection yourself.
- **Local Directory** - Use this option when your POS registers can access your local network (via the internet or by other methods) directly as a local or network hard drive. In this case the only field that will need to be entered is the **Directory** the data is to be sent to. This field does not have to be same for the main as the registers.

Fields that may be needed for Internet file Transfers:

Host Site: The domain name or IP address of the web site (normally an FTP site) storing the files.

Host Logon Name: The user name you will be logging into the site as.

Host Logon Password: The password this user logs on as.

Account: The account name or number to logon to the web site, if required.

Port: The specific port number to communicate through, if required.

Firewall Type: The type of firewall you have

- 0 = No firewall
- 1 = Use Socks4 firewall
- 2 = Use Socks5 firewall
- 3 = Use Proxy USER command
- 4 = Use Proxy SITE command
- 5 = Use Proxy PROXY command
- 6 = Use Proxy OPEN command
- 7 = Use simple Pipe

Firewall Port: The specific port number to the firewall through.

Firewall Host: The name of the firewall host.

Firewall Logon Name: The user name you will be logging into the firewall with, if required.

Firewall Password: The password this user logs onto the firewall with, if required.

Printer Setup

Information on your printer preferences

Printers are setup for each user. The Printer Setup screen allows you to setup a printer to print wide reports, narrow reports, mailing labels, and a receipt printer. Here you specify which printer handles RICS print jobs. You only need to setup your printer once for each of the four options, unless you change printers.

To setup a printer:

1. Click the tab of the printer you want to change (Wide, Narrow, Mailing Labels, or Receipt)
2. Click the **[Change Printer]** button
3. Select from the list of Printers Setup in Windows. (Printers must be setup in Windows before they will be listed here.
4. In the Print Setup window, select the paper size (letter or legal) and orientation (portrait or landscape) and the paper source (automatic, first available, manual, tray 1, or tray 2). Changing a printer here will then make the new printer the default printer in Windows. Click OK to save your settings.
5. Use the printer (wide, narrow, mailing label, or receipt) specific options listed below to complete the Printer Setup.
6. Click the **[Save]** button.

NOTE: For printing bar codes, RICS supports laser printers (**NOT ink jet, desk jet, or bubble jet printers**) made by HP (Hewlett Packard). Many laser printers claim to be HP compatible, but are **NOT** 100% compatible. Therefore, CSI only guarantees RICS to work with HP laser printers.

CSI recommends an Zebra* LP2722 or TLP2722 bar code printer for printing bar code labels. If using two printers, we recommend having a second parallel printer port installed in the main computer to attach the second printer instead of using an A/B switch box.

Wide Reports:

- **Dot Matrix/Text-Only Printer** – check this option if you are using a **Dot Matrix Printer**
- **Print reports to screen spool file** option prints to a file which can be viewed at a later time. If this option is not checked, the wide reports print directly to the printer. See Look at screen spool file for more information.
- **Print journals to a screen spool file** option always print journals to a screen spool file preventing a lost journal if the printer jams. See Look at screen spool file for more information.
- **Lines per page** - how many lines are printed before going to a new page. **Laser Printers** reports are required to print on legal size paper (8½" X 14") in landscape mode and the lines per page are **41**. **Dot Matrix Printers** reports are printed on 14" X 11" continuous paper and the lines per page are **56**.
- **Print to receipt printer when possible** is only used for a 40 column receipt printer at a POS.
- Select the font to use. The fonts listed are the fonts that you have in your computer. **Recommended fonts** in both **Compressed** and **Un-compressed** are **Courier New**, **Line Printer** or **Lucida Console**. You may want to experiment with some of the other fonts to get a different look to your reports.
- **Top Margin** and **Left Margin** – number of inches to from the top and left to start printing

Narrow Reports:

- **Dot Matrix/Text-Only Printer** – check this option if you are using a **Dot Matrix Printer**
- **Print reports to screen spool file** option prints to a file which can be viewed at a later time. If this option is not checked, the wide reports print directly to the printer. See Look at screen spool file for more information.
- **Lines per page** - how many lines are printed before going to a new page. **Laser Printers** are required to print on letter size paper (8½" X 11") in portrait mode and the lines per page is **56**. **Dot Matrix Printers** reports are printed on 8 ½" X 11" continuous paper and the lines per page is also **56**.
- **Print Purchase Orders to a screen spool file** is an option to always print a Purchase Order to a screen spool file preventing a lost PO if the printer jams.
- **Print to receipt printer when possible** is only used for a 40 column receipt printer at a POS.
- Select the font to use. The fonts listed are the fonts that you have in your computer. **Recommended fonts** in both **Compressed** and **Un-compressed** are **Courier New**, **Line Printer** or **Lucida Console**. You may want to experiment with some of the other fonts to get a different look to your reports.
- **Top Margin** and **Left Margin** – number of inches to from the top and left to start printing

Mailing Labels:

- **Dot Matrix/Text-Only Printer** – check this option if you are using a **Dot Matrix Printer**
- Select the type/size labels you are using for your printer.
 - **Dot Matrix Printers:** Select either the **1 across labels** or **4 across labels**.
 - **Laser Printers:** Select either **laser sheets (2X10)** or **laser sheets (3X10)**
 - **Zebra (LP/TLP) Printers:** Select **Zebra (LP/TLP) Labels**
- Select the font to use. The fonts listed are the fonts that you have in your computer. **Recommended fonts** in both **Compressed** and **Un-compressed** are **Courier**, or **Line Printer**. You may want to experiment with some of the other fonts to get a different look to your labels.
- If you want your labels to printer larger or smaller than the default size, enter a **Font Size**. The default size is 10. The larger the number, the bigger the font will print.
- **Top Margin** and **Left Margin** – number of inches to from the top and left to start printing

Receipt Printer:

- If using a thermal or Dot Matrix printer, check **Dot Matrix/Text-Only Printer** option. Select the font to use. The fonts listed are the fonts that you have in your computer. **Recommended fonts are: Un-compressed: Roman 10cpi and Compressed: Roman 17cpi.**

***PLEASE NOTE:** Zebra printers were formerly manufactured under the name Eltron. All settings and instructions under either name are interchangeable with regards to appropriate model number.

Mail List Setup

Information on your mail list preferences

This option is used to set up the additional information you might want to keep about customers in the Mailing List file. Up to six additional items can be entered. You do not have to set up any additional items. You can add or change these entries at a later time.

Description	Length (1 to 24)
GENDER	1
BIRTHDATE	8
TOP SIZE	3
WAIST SIZE	3
SHOE SIZE	3

☒ Save Mail Detail

Omit these categories from posting to Mail Detail :

800-899

Prevent these categories from adding quantities to purchase totals :

950

Description: Can be up to 15 characters for each item, and its **Length** (up to 24 characters). In the above example **Gender** only needs to be **1** length because you only want an **M** or **F** to be entered, where as **Shoe Size** needs to be a length of **3** to fit sizes such as 110.

Save Mail Detail: You can, optionally, also **Save Mail Detail** information (information about each SKU purchased). Then, when printing the mailing list, you could select customers that have purchased a specific SKU, or purchased from a particular vendor, category, or purchased an item on a specific date. This information, however, does consume extra disk space.

Omit these categories from posting to Mail

Detail: Assume you have categories for accessories (shoe strings, polish, etc.), and you do not want to keep sales of these items in the customer detail. Enter these category numbers or ranges in the **Omit these categories from posting to Mail Detail** field. These categories are still posted to the sales and inventory files, they are just not added the mailing list detail file (customer detail).

Prevent these categories from adding quantities to purchase totals: Assume you have SKUs in categories to track coupons, promotions or special discounts, and you do not want to have these added to the customer purchase quantity totals. Enter these category numbers or ranges in the **Prevent these categories from adding quantities to purchase totals** field. These categories are still posted to the sales and inventory files. They are just not added to the customer purchase quantity totals.

Season Setup

Define your seasons

Season Code Setup

Keystrokes Help

Season	Description	Season	Description
1	Old Sea	B	Aut 03
2	Holiday	C	Win 03
3	All Year	D	Spr 04
4	Win 01	E	Sum 04
5	Spr 02	F	Aut 04
6	Sum 02	G	Win 04
7	Aut 02	H	Spr 05
8	Win 02	I	Sum 05
9	Spr 03	J	Aut 05
A	Sum 03	K	Win 05

Save Exit INS CAPS NUM

Save the season code setup options

When entering a SKU, assign a season code to each SKU. When printing reports you may then choose to print only selected seasons. Using this menu option, you can assign a description (up to 8 characters) for up to 20 different seasons.

You may want to create one season for Old, Hashed, [Past](#), or Previous seasons. When you have used all 20 seasons and you need to create a new season, move your oldest season(s) to this season. See [Change Seasons](#).

You may also want to create another season for [All Year](#) round or Basic merchandise and then run reports on just your Basic merchandise, new season, or any combination of seasons.

System Status Report

Information on your job history, files, and system information

Print Job history - is a list of options that were selected from the menu for up to the last **2 months**. You can enter a date range to use this option to determine if a particular option was done, and if so, by whom and when.

Print File Statistics - is a list of each of the data files in RICS showing the number of records and the size of each file in kilo-bytes.

Print RICS System Information - is a list of information setup in RICS which includes **Company**, **Mail List** and **Season** Setups, along with the **RICS.CFG** and **Vendor.CFG** files.
